Summary Of Major US Chess Rules Updates In the Seventh Edition January 1, 2020

11D: Added wording regarding the timing of the claim and when the 2-minute penalty applies. A TD TIP was also added.

11D1: Deleted extraneous wording.

Summary Of Major US Chess Rules Updates In the Seventh Edition For Chapters 1+2+11

5B2: Advanced publicity time controls need to contain both the base time control and the delay/increment.

5C1: Both players must have the same time control. Addresses “Time odds” games not being ratable along with an additional TD TIP.

5E: Recommended Increment or delay: Old rule 5E is replaced with recommended increment and delay settings.

5E1: Increment or delay with mixed time controls: Subrule added to new rule 5E with wording addressing mixed time controls.

5E2: Organizer fails to specify increment or delay: Subrule added to new rule 5E with wording addressing the lack of a specified increment or delay.

5F: Standard timer: The entire text was replaced.

5F1: Standard timer for increment time controls: Defines the clock used for increment time controls.

5F1a: Increment capable clock not available: What to do when an increment clock is not available.

5F1b: Setting a non-increment capable clock for use with an increment time control: How to set non-increment clocks used in increment time control.

5F1b1: Variation: How the organizer may specify a different time control for Non-increment clocks.

5F2: Standard timer for delay time controls: Defines the clock that is used for delay time controls.

5F2a: Delay capable clock not available: What to do if a delay capable clock is not available for a delay time control.

5F2a1: Variation: How the organizer may specify a different time control for Non-DELAY clocks.

5F3: Standard timer for time controls with neither delay nor increment: Defines which clocks can be used when a delay clock is not available for a delay time control.

5F4: Digital clock preferred over analog clock: In all cases, a digital clock is preferred over an analog clock plus an added TD TIP

5F5: Replacement of non-standard timer in increment and delay time controls: The steps to take when a late arriving player substitutes a preferred increment or delay clock for a non-standard clock

5F6: Same clock used for the entire game.

5F7: Players responsible for knowing how to set the clock.

9D: Pawn Promotion. New wording makes the procedure of promoting a pawn clearer. Now the pawn is considered touched and must be promoted to the unreleased piece touching the promotion square.

10H: Piece touched off the board. Wording changes to be consistent with rule 9D. Once the piece off of the board touches the promotion square, the pawn must be promoted to that piece.

10I2: When castling, the King must be touched first.

10I2 Variation 1: Castling is allowed if the Rook is touched first.

11A: Illegal move in last ten moves: Added wording regarding time pressure and time recovered by players.

11D1: Illegal move in time pressure: Wording defining “time pressure” was added.

11H: Director corrects illegal move in non sudden death. Rule name changed (**Director corrects illegal move outside of time pressure**) along with added wording regarding non-time pressure situations.

14G: Both flags down in sudden death: Added wording regarding the observation of the flag fall and the game result.

14H: New wording eliminating insufficient losing chances.

Variation 14H: Old rule 14H is now an unannounced variation.

14K (new): Old 14K is replaced with: The TD (tournament director) can declare a draw if the same position has appeared 5 times in a row. The TD can declare a draw if 75 moves have been made without a pawn move or piece capture

16D: Special rules for time pressure: Deleted wording replaced with added links.

16P1: Delay or increment not set: A new rule dealing with how to address the situation with clocks that are not set with the proper delay or increment.

16Q: Interruption of game: Added wording defining “interruption.”

16R: Illegal moves: Rule name change with deleted wording replaced with added links.

21L1: The “good faith” deposit amount included when filing an appeal can be determined by the Executive Director.

28L2a Variation (announced): Giving the bye to a higher rated player. A variation that need not be announced in advance was added to rule 28L2. The variation allows assigning the bye to a higher rated player, rather than the lowest rated player, in the lowest score group in order to improve color assignments for the entire group.

29E8: Variation (unannounced) team pairings take precedence over color equalization. A variation that need not be announced in advance was added to rule 28E. Variation 29E8 avoids pairing players from the same team as a higher priority than equalizing player assigned colors in team/individual tournaments.

32B1: Special prizes, above and beyond the typical prize fund, should be announced and designated.

[32B3](#): When pooling prizes, no player can receive a prize larger than the largest amount they would be eligible for without the split.

[33D1](#): Added wording regarding special prizes.

[35F10e](#): Added duties of an assistant to a blind or disabled player.

[35F10g](#): Added duties of an assistant to a blind or disabled player.

[Blitz: An editor's Note](#): at the start of the chapter was added.

[Blitz: Rule 7c](#): has all new wording regarding the won game.

[Blitz: Added to rule 7d](#): wording regarding placing a king next to a king.

[Blitz: Rule 8](#): added wording after “Defining a draw” to make clear which draw claims are allowed.

[Blitz: Rule 14](#): deleted some wording regarding the claim of a win.

[Blitz: Rule 18](#): added a TD Tip regarding appeals.

| 9H. Stopping the clock. | 24 |
| 10. The Touched Piece | 24 |
| 10A. Adjustment of pieces..... | 25 |
| 10B. Touch-move rule. | 25 |
| 10C. Touching pieces of both colors. | 25 |
| 10D. Piece touched cannot move..... | 25 |
| 10E. Accidental touch of piece. | 25 |
| 10F. Appearance of adjustment. | 25 |
| 10G. Accidental release of piece. | 25 |
| 10H. Piece touched off the board..... | 25 |
| 10I. Castling..... | 26 |
| 10J. When to claim touch-move. | 26 |
| 11. Illegal Positions | 26 |
| 11A. Illegal move during last ten moves. | 26 |
| 11B. Illegal move prior to last ten moves. | 26 |
| 11C. Accidental piece displacement. | 26 |
| 11D. Illegal move. | 27 |
| 11E. Incorrect adjourned position..... | 27 |
| 11F. Incorrect initial position..... | 27 |
| 11G. Incorrect placement of chessboard..... | 27 |
| 11H. Director corrects illegal move outside of time pressure..... | 27 |
| 11I. Spectators. | 28 |
| 11J. Deliberate illegal moves..... | 28 |
| 12. Check..... | 28 |
| 12A. Definition..... | 28 |
| 12B. Double check..... | 28 |
| 12C. Responding to check. | 28 |
| 12D. Check by interposing piece. | 28 |
| 12E. Moving into check..... | 28 |
| 12F. Calling check not mandatory. | 28 |
| 13. The Decisive Game..... | 28 |
| 13A. Checkmate. | 28 |
| 13B. Resignation. | 29 |
| 13C. Time forfeit. | 29 |
| 13D. Late arrival for game..... | 31 |
| 13E. Late arrival for adjournment resumption..... | 32 |
| 13F. Late arrival by both players. | 32 |
| 13G. Players must give notice if withdrawing or skipping a round. | 32 |
| 13H. Sealing of invalid move. | 32 |
| 13I. Refusal to obey rules. | 32 |
| 14. The Drawn Game..... | 33 |
| 14A. Stalemate..... | 33 |
| 14B. Agreement..... | 34 |
| 14C. Triple occurrence of position. | 35 |
| 14D. Insufficient material to continue. | 36 |
| 14E. Insufficient material to win on time. | 36 |
| 14F. The 50-move rule. | 36 |
| 14G. Both flags down in sudden death. | 37 |
| 14H. Claim of insufficient losing chances in sudden death. | 38 |
| 14I. Advice on claims of insufficient losing chances in sudden death under Rule Variation 14H. | 40 |

| | |
|---|----|
| 14J. Draw declared by director. | 40 |
| 14K. Director declares draw for lack of progress. | 40 |
| 15. The Recording of Games | 41 |
| 15A. Manner of keeping score..... | 41 |
| 15A. (Variation I) Paper scoresheet variation..... | 41 |
| 15B. Scorekeeping in time pressure, non-sudden death time control. | 42 |
| 15C. Scorekeeping in time pressure, sudden death time control. | 42 |
| 15D. Use of opponent's scoresheet for assistance. | 42 |
| 15E. Borrowing not needed. | 42 |
| 15F. Reconstruction after time control. | 42 |
| 15G. Ownership of scoresheets. | 43 |
| 15H. Reporting of results..... | 43 |
| 15I. Results reported incorrectly..... | 43 |
| 16. The Use of the Chess Clock..... | 44 |
| 16A. Allowable time controls..... | 44 |
| 16B. How to set clocks. | 44 |
| 16C. Removing a player's hand from clock. | 45 |
| 16D. Special rules for time pressure. | 45 |
| 16E. When flag is considered down. | 45 |
| 16F. Evidence provided by flag..... | 45 |
| 16G. Premature flag fall. | 45 |
| 16H. Apparent flag fall can cause forfeit..... | 45 |
| 16I. Starting the clock..... | 47 |
| 16J. Black not present..... | 47 |
| 16K. Both players late. | 47 |
| 16L. Possible stipulations. | 47 |
| 16M. Equipment needed to start clock. | 47 |
| 16N. Beginning the round..... | 47 |
| 16O. Defective clocks..... | 48 |
| 16P. Erroneously set clocks. | 48 |
| 16Q. Interruption of game. | 48 |
| 16R. Illegal Moves..... | 48 |
| 16S. Priority of agreed result over time-forfeit claim. | 49 |
| 16T. Both players exceed time control. | 49 |
| 16U. Avoiding the need to reset clocks. | 49 |
| 16V. One vs. two controls when time is limited..... | 49 |
| 16W. Resetting clocks when necessary. | 49 |
| 16X. Extra minute not added. | 49 |
| 16Y. Assisting players with time management prohibited. | 49 |
| 17. Scheduling..... | 49 |
| 17A. Determination of game times..... | 49 |
| 17B. Delayed games. | 50 |
| 17C. Changes in round times..... | 50 |
| 18. The Adjournment of the Game | 50 |
| 18A. Description..... | 50 |
| 18B. Sealing a move early. | 50 |
| 18C. When to adjourn..... | 50 |
| 18D. The sealed move envelope. | 51 |
| 18E. Custody of sealed move envelope. | 51 |
| 18F. Problems of the next-to-last round. | 51 |
| 18G. Adjudications..... | 51 |
| 19. Resumption of the Adjourned Game | 52 |
| 19A. Setup. | 52 |
| 19B. Opening the envelope..... | 52 |
| 19C. Opponent of sealing player absent. | 52 |
| 19D. Sealing player absent. | 52 |

| | |
|---|----|
| 19E. Sealed move envelope missing..... | 52 |
| 19F. Sealed move ambiguous..... | 52 |
| 19G. Sealed move invalid..... | 52 |
| 19H. Game resumed with wrong times on clock..... | 53 |
| 19I. Game resumed with incorrect position..... | 53 |
| 19J. Agreed result of adjourned game..... | 53 |
| 20. Conduct of Players and Spectators..... | 53 |
| 20A. Conduct of players..... | 53 |
| 20B. Use of recorded matter prohibited..... | 53 |
| 20C. Use of notes prohibited..... | 53 |
| 20D. Use of additional chessboard or computer prohibited..... | 53 |
| 20E. Soliciting or using advice prohibited..... | 53 |
| 20F. Analysis in the playing room prohibited..... | 55 |
| 20G. Annoying behavior prohibited..... | 55 |
| 20H. Long absence during play..... | 55 |
| 20I. Discussion of games..... | 55 |
| 20J. Last round discussion..... | 55 |
| 20K. Penalties..... | 55 |
| 20L. Manipulating results..... | 56 |
| 20M. Behavior of spectators..... | 56 |
| 20N. Electronic communication devices..... | 56 |

| CHAPTER 11: BLITZ CHESS..... | 119 |
| US Chess Blitz Rules..... | 119 |

An additional set of [scholastic rules](#), developed by the Scholastic Committee for scholastic tournaments, may apply instead of the rules in this book. The scholastic rules are updated often and are available from [US Chess](#).

Chapter 1: US Chess Federation's Official Rules of Chess

US Chess Section

1. Introduction

1A. Scope.

Most problems concerning rules that may arise during a chess game are covered in this book. However, the rules of chess cannot and should not regulate all possible situations. In situations not explicitly covered, the tournament director can usually reach a fair decision by considering similar cases and applying their principles analogously. The United States Chess Federation (US Chess) presumes that its tournament directors have the competence, sound judgment, and absolute objectivity needed to arrive at fair and logical solutions to problems not specifically treated by these rules.

1B. Validity.

US Chess play shall be governed by these rules of chess and by all US Chess procedures and policies. World Chess Federation (Federation Internationale des Echecs, or FIDE) rules shall not be used unless specifically announced in advance. For events that use FIDE rather than US Chess rules, see [Chapter 14, International \(FIDE\) Laws of Chess](#)

1B1. Notification.

Any variations from these published rules, including variations discussed in this rulebook, should be posted and/or announced at the tournament prior to their use, preferably before the first round.

1B2. Major variations.

A variation sufficiently major so that it might reasonably be expected to deter some players from entering should be mentioned in any *Chess Life* announcement and all other detailed pre-tournament publicity and posted and/or announced at the tournament.

1C. Types of events.

1C1. Major events.

While the basic laws of chess do not vary from event to event, some material in this book is designed principally for major tournaments and is unlikely to be relevant otherwise. For example, unethical behavior is rare in chess; many players reading this book will play virtually all their games as friendly encounters in the spirit of good sportsmanship. But there are rare occasions, especially when large prizes or important titles are at stake, when a player steps beyond the bounds of friendly competition. Rules are needed to cover these situations.

1C2. Director discretion.

In areas in which the director has discretion, it is appropriate to be strictest with rules enforcement and penalties in events that are stronger or offer larger prizes. Being harshly penalized over a trivial rules violation can be sufficiently upsetting to deter a beginner from future chess participation.

1C2a. Standard penalty.

Except where specifically noted in the rules, the standard penalty assessed by the director is to add two minutes to the remaining time of the opponent of the player not following the rules of chess.

1C2b. Non-standard penalties.

Except where specifically noted in the rules, the director may assess penalties either more or less severe than the standard penalty (1C2a). It is often more appropriate for a director to issue a warning(s) before applying 1C2a in cases involving young or inexperienced players. A director may assess a more severe penalty in cases involving players who repeatedly do not follow the rules of chess.

2. The Chessboard

2A. Explanation.

Two opponents moving pieces on a square board called a *chessboard* play the game.

2B. Description.

The chessboard is composed of sixty-four squares of identical size, eight squares by eight squares, alternately light and dark. The light squares are referred to as *white squares* and the dark squares *black squares*, even though other colors are frequently used. (For instance, in tournament play *black squares* are often green.)

2C. Placement.

The chessboard is placed between the players in such a way that the nearer corner to the right of each player is white. **For information** regarding chessboard placement for blind players see [35F1, Special chessboard](#).

2D. Files.

The eight vertical rows of squares are called *files*.

2E. Ranks.

The eight horizontal rows of squares are called *ranks*.

2F. Diagonals.

The lines of squares of the same color, touching at their corners only and running in a straight line from one edge of the board to another, are called *diagonals*; those running from one corner of the board to another are called *long diagonals*.

3. The Pieces

3A. Each player's pieces.

At the beginning of the game, one player (White) has sixteen light-colored pieces (the white pieces); the other (Black) has sixteen dark-colored pieces (the black pieces).

3B. Description of the pieces.

These pieces are as follows:

a white king, usually indicated by the symbol:

a white queen, usually indicated by the symbol:

two white rooks, usually indicated by the symbol:

two white bishops, usually indicated by the symbol:

two white knights, usually indicated by the symbol:

eight white pawns, usually indicated by the symbol:

a black king, usually indicated by the symbol:

a black queen, usually indicated by the symbol:

two black rooks, usually indicated by the symbol:

two black bishops, usually indicated by the symbol:

two black knights, usually indicated by the symbol:

eight black pawns, usually indicated by the symbol:

3C. Initial position.

The initial position of the pieces on the chessboard is as follows (See [Figure 1 next page](#)):

Figure 1

3D. Meaning of piece.

The word *piece* has acquired various meanings in chess jargon. When used in a rules context, a *piece* is anything on the chessboard - a king, queen, rook, bishop, knight, or pawn. This book will not subsequently use the alternate connotations of *piece*, which follow for informational purposes only.

A second meaning of *piece* excludes pawns. For instance, a chess player referring to *passive pieces* or *an attack by pieces* or *forking my pieces* is referring to pieces other than pawns.

A third and even more limited meaning: If a player is said to win, lose, or sacrifice a piece, the meaning is only bishop or knight. If a queen, rook, or pawn is won, lost, or sacrificed, it is referred to by name - *winning the queen*, *winning a pawn*, etc. A bishop or knight is also known as a *minor piece*, a queen or rook as a *major piece*.

3E. Other expressions involving pieces.

These are presented for informational purposes only.

3E1. Castling long.

Castling on the queenside (using the rook on a1, to the left of the white king, or the rook on a8, to the right of the black king). **See also** 8A2, [Castling](#).

3E2. Castling short.

Castling on the kingside (using the rook on h1, to the right of the white king or the rook on h8, to the left of the black king). **See also** 8A2, [Castling](#).

3E3. Discovered check, double check.

See [Rule 12, Check](#).

3E4. Exchange.

- a. *The Exchange* or *an Exchange* refers to the difference between one player's rook and the other's bishop or knight. A player giving up a rook for a bishop or knight is said to *lose the Exchange* and that player's opponent to *win the Exchange*.

- b. *The exchange of queens* indicates the capture of each player's queen by the other player. The same language may be used regarding rooks, bishops, knights, or pawns.

3E5. Fork.

When there is a simultaneous attack on two or more pieces by one piece.

3E6. Interpose.

To place a piece between one's king and an opponent's checking piece. **See also** [12A, Definition](#).

3E7. Material.

Pieces other than the king.

3E8. Pin.

A piece is said to be *pinned* if either it cannot legally move because such a move would expose its king to check, or moving it would be unwise because this would allow the opponent to advantageously capture a shielded piece.

3E9. Sacrifice.

To deliberately allow the capture of a piece or pieces, receiving in immediate return no pieces, or a piece or pieces usually considered to have less value. The ultimate objective of a sacrifice is often to expose the opponent's king to attack, or to recover the sacrificed material and more.

3E10. Zugzwang.

A situation in which moving any piece is disadvantageous. The player in *zugzwang* would be better off declining to move (passing), but this is not permitted.

4. Objective and Scoring

4A. Checkmate.

The objective of each of the two players in a game of chess is to win the game by checkmating the opponent's king. A player's king is checkmated when the square it occupies is attacked by one or more of the opponent's pieces and the player has no move that escapes such attack. **See also** [Rule 12, Check](#); [12C, Responding to check](#); and [13A, Checkmate](#).

4B. Other decisive outcomes.

A common way for a player to win the game is the resignation of the opponent, conceding inevitable checkmate. A player may also win in other ways, such as the opponent's exceeding of the time limit. **See also** [13, The Decisive Game](#).

4C. Draws.

An indecisive result or draw may be agreed upon, usually indicating that neither player expects to be able to checkmate the other. **See also** [14, The Drawn Game](#).

4D. Scoring.

For a won game, the winner gets one (1) point and the loser zero (0); for a draw, each player gets a half point (0.5 or ½). **See also** [22, Unplayed Games](#).

5. The Chess Clock

5A. Time controls and time limits.

Each player must make a certain number of moves, all moves, or all remaining moves in an allotted period of time, these factors being specified in advance. In a non-sudden death time control, if both players complete the required moves in the allotted time, a new period begins. Each such time period is called a *time control* or *control*.

Time controls appear in tournament publicity as number of moves (#), slash (/), time in minutes (mm): # / mm. For instance, if each player must make 40 moves in 1½ hours, this is abbreviated 40/90.

5B. Sudden death time controls.

For example, 40/120 SD/60 indicates 40 moves in two hours (120 minutes) followed by the rest of the game in one hour (60 minutes).

5B1. Delay and increment.

5B1a. Delay time controls. If the time control indicates a delay (pause) time, the abbreviation d/ is used; the delay time is given in seconds.

5B1b. Increment time controls. If the time control indicates an incremental (added) time, the abbreviation inc/ (or +) is used, the added time is given in seconds of added time.

5B1c. If no delay or increment is to be used then d/0 indicates no delay or increment time.

5B2. Advanced publicity required time control information.

In all advance publicity which specifies the time control, the organizer is to indicate the full time control, including the delay or increment, as minutes (mm) and seconds (ss), e.g. G/90 inc/30 (or +30); G/30 d/5; G/10 d/3; G/5 d/0. The time control must be specified in Tournament Life Announcements and should be specified in other publicity such as flyer mailings, email and on web sites. It is acceptable for abbreviated publicity to refer the reader to more complete tournament details posted elsewhere.

5C. Ratable time controls.

There are three rating systems: Regular (slow), Quick (fast) and Blitz. For the purposes of rating G/minutes and inc/seconds (or d/seconds), add minutes (mm) and seconds (ss) for total playing time for each player. That is, total time equals minutes plus (seconds times 60) or mm+ss; e.g.: G/60 d/5 = 60+5 = 65 minutes total playing time for each player. Multiple time controls add all mm for each control: mm = mm(1) + mm(2) +

Regular only: Total playing time for each player is greater than 65 minutes (mm+ss > 65).

Dual (both regular and quick): Total playing time for each player is from 30 to 65 minutes ($30 \leq \text{mm} + \text{ss} \leq 65$).

Quick only: Total playing time for each player is more than 10 and less than 30 minutes ($10 < \text{mm} + \text{ss} < 30$)
For Regular, Dual and Quick the primary time (mm in minutes) must be at least 5 minutes.

Blitz: Total playing time for each player is from 5 to 10 minutes inclusive and the primary time control must be at least 3 minutes. $5 \leq \text{mm} + \text{ss} \leq 10$ All rounds must use the same time control. (See standard time controls table next page)

TD TIP: Examples of standard time controls:

| | |
|--------------------|---------|
| 40/90 SD/30 inc/30 | Regular |
| 40/120 SD/60 d/5 | Regular |
| 40/115 SD/60 d/5 | Regular |
| G/120 inc/30 | Regular |
| G/120 d/5 | Regular |
| G/115 d/5 | Regular |
| G/90 inc/30 | Regular |
| G/90 d/5 | Regular |
| G/60 inc/30 | Regular |
| G/60 d/5 | Dual |
| 30/30 SD/30 d/5 | Dual |
| G/30 d/5 | Dual |
| G/25 d/5 | Dual |
| G/25 d/3 | Quick |
| G/15 d/3 | Quick |
| G/10 d/3 | Quick |
| G/10 d/0 | Blitz |
| G/5 d/0 | Blitz |
| G/3 inc/2 | Blitz |

When used, standard increment is 30 seconds (Regular).
 Standard delay is 5 seconds (regular or dual); and 3 seconds (quick).
 Standard blitz uses no delay or increment (see chapter 11).

Although these are not all of the possible time controls, organizers are encouraged to select one of the above (or very similar) so that all participants are clear as what to expect and under which system the event will be rated.

TD TIP: Here is how the changes referred to in 5C will be implemented and administered:

Quick Chess: A Quick Chess event is for a person who wishes to play many games in one day and not have the results affect his regular rating. The time controls in a Quick Chess tournament are designed to be a single time control of more than 10 to less than 30 total playing minutes per player, one second delay or increment counting as 1 minute playing time. $10 < mm + ss < 30$. Sudden-death rules are used in Quick Chess events, except scorekeeping is not required.

Dual Rating: All events with total playing time for each player of 30 to 65 minutes inclusive ($30 \leq mm+ss \leq 65$) will be dual rated, that is, rated under both the Quick and Regular rating systems.

Blitz: Any event that the total playing time 5 minutes or greater and is 10 minutes or less ($5 \leq mm+ss \leq 10$) will be **Blitz rated**. (Blitz rules apply, see Chapter 11.) For clarity, it is advisable to state Blitz in the title or in the time control of the event.

Note 1: Game/60 d/5 is Dual Rated. If you wish for the games not to be Quick Rated, make the total basic time control at least Game in 61 minutes or longer and use a 5 second delay ($61 + 5 = 66$). Game/25 d/5 is also Dual Rated ($25 + 5 = 30$). If you do not want these games to be Regular Rated, make the time control Game/26 d/3 ($26 + 3 = 29$) or quicker.

Note 2: The TD must indicate what the time control is for all sections of all events, including the delay or increment used. If submitting by disk or paper, the time control is to be indicated. If different sections have different time controls, indicate the time control for each section. If submitting the report online, the TD is to enter the time control for all sections. The time control used indicates whether the event is regular, dual, quick or blitz.

Note 3: *If a section has different schedules that merge, the slowest control is all that is needed, provided all games meet the criteria for the slowest time control. This applies when early rounds might fall in the dual rated group (which is regular rated, and the slower time control is regular only. All rounds will then be regular rated only.*

Example: *3-day schedule is 40/120 SD/60. The 2 day schedule plays rounds 1 and 2 at game/45 and then merges with the 3-day schedule for round 3. All that needs to be reported is the 40/120 SD/60 (120 + 60) as US Chess cannot separate the schedules at this point.*

If any games in a section use a time control that is quick-ratable only (i.e. total time greater than 10 minutes but less than 30 minutes), then all games in that section must use time controls that are quick-ratable only. If any games in a section use a time control that is blitz ratable (i.e. total time between 5 and 10 minutes), then all games in that section must use time controls that are blitz ratable.

5C1. Both players must have the same time control.

For a game to be ratable, the same time control must apply to both players. “Time odds” games (games in which the time control assigns the two players different base times) are not ratable.

TD TIP: *The director may apply penalties against a player’s time before the game begins, causing the players to start the game with different times on the clock. This does not affect the ratability of the game.*

5D. Accumulation of time.

The time unused by a player during one control accumulates and is added to the player’s available time for the next control.

5E. Recommended increment or delay.

For a mixed or repeating time control, or for a base time of 30 minutes or more, an increment or delay in the range of 5 to 30 seconds is recommended. For a base time of more than 10 minutes and less than 30 minutes, an increment or delay of 3 seconds is recommended. For a base time of 10 minutes or less, an increment or delay of 2 seconds is recommended.

5E1. Increment or delay with mixed time controls.

If a mixed time control includes increment or delay, the increment or delay should apply starting with the first move of the game, and the increment or delay time should be the same for all time control segments in the game.

5E2. Organizer fails to specify increment or delay.

If the organizer fails to specify an increment or delay time in the time control (which may be zero to indicate no increment or delay), the minimum recommended delay specified in rule [5E](#) shall apply.

5F. Standard timer.

5F1. Standard timer for increment time controls.

An increment capable clock is the standard timer for use with an increment time control.

5F1a. Increment capable clock not available.

If an increment capable clock is not available, one of the following clocks, listed in order of preference from most to least preferred, may be used:

1. A delay capable clock whose delay can be set for the increment time.
2. A delay capable clock whose delay cannot be set for the increment time.
3. A digital clock that is not delay capable.
4. An analog clock.

5F1b. Setting a non-increment capable clock for use with an increment time control.

In all cases, each player starts with the clock set for the base time. If the clock is delay capable and the delay can be set the same as the increment time, the clock should be so configured. Otherwise, if the clock is delay capable, set the delay time to the maximum possible value that does not exceed the increment time. If the clock is not delay capable, the clock is set to the base time.

5F1b1. Variation.

The organizer may specify a different time control to be used with clocks that are capable of neither increment nor delay. This must be specified in all pre-tournament publicity that specifies the time control.

5F2. Standard timer for delay time controls.

A delay capable clock is the standard timer for use with a delay time control.

5F2a. Delay capable clock not available.

If a delay capable (or Bronstein capable) clock is not available, a digital clock that is not delay capable may be used. If a digital clock is not available, an analog clock may be used. In all cases, the clock is set so that each player starts with the base time.

5F2a1. Variation.

The organizer may specify a different time control to be used with clocks that are not delay capable. This must be specified in all pre-tournament publicity that specifies the time control.

5F3. Standard timer for time controls with neither delay nor increment.

The standard timer for a time control with neither delay nor increment is a digital clock. If a digital clock is not available, an analog clock may be used.

5F4. Digital clock preferred over analog clock.

In all cases, a digital clock is preferred over an analog clock.

***TD TIP:** A digital clock operates silently. It can be set so that both players have exactly the same amount of time. Digital clocks time the game more precisely and are not subject to having the two sides of the clock run at different rates.*

5F5. Replacement of non-standard timer in increment and delay time controls.

If either player arrives late for the start of the game, and a clock without delay or increment has already been started the player has the right to furnish and substitute a properly set delay or increment capable clock prior to the determination of Black's first move. The player substituting the delay or increment capable clock must also transfer the elapsed times shown on the original clock to the replacement clock without any additional adjustments (except to correct any errors in the display of the elapsed time).

5F6. Same clock used for the entire game.

Except as provided in rules [5F5](#) and [14H2a](#), once a game starts, the same clock must be used throughout the entire game. If a defective clock must be replaced as described in rule [16O](#), the replacement clock shall be set in the same manner as the clock being replaced. **See also** [5F5](#), [Replacement of non-standard timer in increment and delay time controls](#); [14H2a](#), [The claim is unclear and a delay clock is available for the game](#); and [16O](#), [Defective clocks](#).

5F7. Players responsible for knowing how to set the clock.

Players, not tournament directors, are responsible for knowing how to properly set their digital clocks. In any particular game, if the player providing the clock can not properly set the clock, the opponent may choose which legal clock is to be used. **See also** [16B](#), [How to set clocks](#).

5G. The flag.

Monitoring of each player's time is effected by means of a clock equipped with a flag or other special device used to signal the end of a time control; the flag falls to indicate the player's time has been used up. Some digital clocks have a beep, a light, or a display of all zeros to indicate that the player's time has been exhausted. References in this book to a flag falling or being down also apply to such *flag substitutes*. **See also** [16E](#), [When flag is considered down](#); [16F](#), [Evidence provided by flag](#); [16G](#), [premature flag fall](#); [16H](#), [Apparent flag fall can cause forfeit](#); [35F5](#), [Special clock](#); and [42B](#), [Signaling devices](#).

5H. Pressing the clock.

After moving, a player presses the button on his or her side of the clock, which stops that side from running and starts the opponent's side. This book refers to such action as *pressing the clock*. **See also** [6A](#), [The first move](#); [16C](#), [Removing a player's hand from the clock](#); [16C1](#), [Using the clock](#); [16I](#), [Starting the clock](#); and [16N](#), [Beginning the round](#).

5I. Stopping the clock.

A player who wishes to make a claim of any sort or see a director for any legitimate reason may stop both sides of the clock before claiming and/or finding a director. This book refers to such action as stopping the clock or stopping both clocks. If the opponent's clock is accidentally started when a player tries to stop both clocks, the director will determine whether the claim is still in order. **See also** [13C6](#), [Claimant's clock](#); [16Q](#), [Interruption of game](#); [21F](#), [Player requests for rulings](#); and [21F1](#), [Timing of requests](#).

TD TIP: *Players should be made aware of the fact that they should generally stop the clock on their time, not their opponent's.*

5J. Further details.

See [16](#), [Use of the Chess Clock](#).

6. The Right to Move**6A. The first move.**

White makes the first move. The players then alternate moves until the game is over. **See also** [5H](#), [Pressing the clock](#); [13D](#), [Late arrival for game](#); [16](#), [Use of the Chess Clock](#); [16I](#), [Starting the clock](#); [16J](#), [Black not present](#); [16M](#), [Equipment needed to start clock](#); and [16N](#), [Beginning the round](#).

6B. A player on move.

A player is said to *be on move* or to *have the move* when the opponent's move has been completed. **See also** [9](#), [Determination and Completion of the move](#).

7. Definition of the Move

7A. Basic definition.

With the exception of castling (8A2) and promotion of a pawn (8F6), a move is the transfer of a piece from one square to another square that is either vacant or occupied by an opponent's piece. **See also** 9, [Determination and Completion of the move](#).

7B. Crossing an occupied square.

With the exception of the king and rook in castling, no piece except the knight may cross a square occupied by another piece. When castling the king and rook may also not cross an occupied square.

7C. Capturing.

A piece played to a square occupied by an opponent's piece captures the latter as part of the move. The player making the capture removes the captured piece immediately from the chessboard. **See also** 8F5, [Capturing en passant](#) and 9B, [Capturing](#).

8. The Moves of the Pieces

8A. The king.

8A1. The king's move.

Except when castling, the king moves to any adjoining square that is not attacked by one or more of the opponent's pieces.

8A2. Castling.

Castling is a move of the king and either rook, counting as a single move and executed as follows: the king is transferred from its original square two squares toward either rook on the same rank; then, that rook is transferred over the king to the square adjacent to the king on the same rank. **See also** 8C1, [Castling](#); 9C, [Castling](#); 10I1, [King touched first, or king and rook simultaneously](#); and 10I2, [Rook touched first](#).

8A3. Castling permanently illegal.

Castling is illegal for the remainder of the game for a player:

- a. If that player's king has already moved, or
- b. With a rook of that player that has already moved.

8A4. Castling temporarily illegal.

Castling is not presently possible if:

- a. An opponent's piece attacks the king's original square (12A, 12B), any square which the king must cross over (12E), or the square the king is to occupy, or
- b. There is any piece between the king and the rook with which it "is to castle."

TD TIP: *In other words: (1) the squares between the king and rook have to be empty; (2) the king cannot be in check, and (3) the king cannot move through or into check.*

8B. The queen.

The queen moves to any square (except as limited by 7B) on the file, rank, or diagonal(s) on which it stands.

8C. The rook.

The rook moves to any square (except as limited by 7B) on the file or rank on which it stands.

8C1. Castling.

Several restrictions on the king in castling ([8A2](#), [8A3](#), [8A4](#)) do not apply to the rook:

- a. A player may castle with a rook whose original square is under attack.
- b. A player may castle with a rook that crosses over a square under attack by an opponent's piece. The only examples of this are the b1 or b8 squares when castling Queenside.
- c. There is no prohibition against the rook occupying a square attacked by an opponent's piece at the conclusion of castling, but this is impossible, as the king would have to illegally cross an attacked square to bring it about.

For related information on castling see [8A2](#), Castling; [9C](#), Castling.

8D. The bishop.

The bishop moves to any square (except as limited by [7B](#)) on the diagonal(s) on which it stands.

8E. The knight.

The knight's move is composed of two different steps. First, it makes one step of one single square along the rank or file on which it stands. It does not land on that square, as its move is not complete ([9A](#)). Then, still moving away from the square of departure, it moves one step of one single square on a diagonal. It does not matter if the square of the first step is occupied.

This move is sometimes called an *L* move, as it is equivalent to moving the knight two squares vertically, then one square horizontally (or two squares horizontally, then one square vertically). Note that the knight always moves to a square different in color than that of its starting square. A knight has a maximum of eight possible moves.

8F. The pawn.

8F1. The pawn's move.

The pawn may only move forward (towards the opponent's side of the board).

8F2. The first move of each pawn.

On its first move, a pawn advances either one or two vacant squares along its file.

8F3. Subsequent moves of each pawn.

On its subsequent moves, a pawn advances one vacant square along its file.

8F4. Pawns move vertically but capture diagonally.

The pawn is unique among chess pieces in that it captures ([7C](#)) and attacks differently from the way it moves. When capturing, it advances one square along either of the diagonals on which it stands; it attacks these same squares.

8F5. Capturing *en passant*.

A pawn, attacking a square bypassed by an opponent's pawn, the latter having advanced two squares in one move from its original square, may capture ([7C](#)) the opponent's pawn as though the latter had moved only one square.

This capture may only be made in immediate reply to such advance and is called an *en passant* (*in passing*) capture. Note that only a pawn that has advanced a total of exactly three squares from its original square is in position to make such a capture.

8F6. Pawn promotion.

On reaching the last rank, a pawn must immediately be exchanged, as part of the same move, for the player's choice of a queen, a rook, a bishop, or a knight of the same color as the pawn. This exchange of the pawn for another piece is called *promotion*, and the effect of the new piece is immediate. For instance, it may give check or serve to block a check. The promotion piece is placed on the eighth-rank promotion square it touched to which the pawn was or will be moved. See also [9D](#), Pawn promotion and [10H](#), Piece touched off the board.

TD TIP: Note that promotion is in no way related to other pieces remaining on the chessboard; for example, a player may have two or more queens, three or more knights, or two bishops on diagonals of the same color. The choice of the piece is not final until it has touched the promotion square on the board (See 9D also 10H).

8F7. Promoted piece not available.

If the desired piece is not available to replace a promoted pawn, the player may stop both clocks in order to locate that piece and place it on the board. A player who cannot quickly find such a piece may request the assistance of the director. It is common practice, however, to play using an upside-down rook for a second queen. In the absence of the player's announcement to the contrary, an upside-down rook shall be considered a queen. It is improper to press the clock to start the opponent's time with the pawn still on the last rank. If this is done, the opponent may immediately restart the player's clock without moving.

As soon as the new piece is placed on the board, either player should restart the clock.

TD TIP: Clocks that have a move counter may need to be readjusted if a player improperly presses the clock with a pawn still on the last rank and the opponent immediately restarts the player's clock.

9. Determination and Completion of the Move

9A. Transfer to a vacant square.

In the case of the legal transfer of a piece to a vacant square, the move (7A, 7B, 7C) is determined with no possibility of change when the player's hand has released the piece, and completed when that player presses the clock (5H).

9B. Capturing.

In the case of a legal capture (7C), the move is determined with no possibility of change when the player has deliberately touched both his or her own piece and the opponent's piece (10C) and completed when that player presses the clock (5H). **See also** 9G, [Determined moves and completed moves](#).

9C. Castling.

In the case of legal castling (8A2, 8C1, 10I1, 10I2), the move is determined with no possibility of change when the player's hand has released the king, which has moved two squares toward a rook, and completed when that player, having legally transferred the rook to its new square, presses the clock (5H).

9D. Pawn promotion.

In the case of the legal promotion of a pawn, the move is determined with no possibility of change when the pawn has been removed from the chessboard and the player's hand has released the new appropriate piece on the promotion square, and completed when that player presses the clock (5H). If the player has released the pawn on the last rank, the move is not yet determined, but the player no longer has the right to play the pawn to another square. The choice of piece is finalized when the piece has touched the square of promotion, regardless of whether the pawn has been physically touched or placed on the promotion square. Once a piece has touched the promotion square a pawn must be promoted to that piece on that square, provided that the move is legal.

See also 8F6, [Pawn promotion](#) and 10H, [Piece touched off the board](#).

TD TIP: Some players thinking they are being "clever" have tried to place one of their opponent's pieces on the promotion square or inappropriately give themselves a second king; however, this is not legal, only "clever."

9E. Checkmate or stalemate.

In the case of a legal move which produces checkmate (13A, 4A) or stalemate (14A), the move is determined with no possibility of change upon release as described in 9A, 9B, 9C, or 9D, whichever applies. The move is completed simultaneously with its determination.

TD TIP: *If the final legal move produces checkmate or stalemate, pressing or stopping the clock, while recommended, is not required because checkmate or stalemate immediately ends the game. See also rules 13A1, The clock after checkmate and 14A1, The clock after stalemate.*

9F. Last move of the time control.

When determining whether the prescribed number of legal moves has been made in the allotted time, the last move is considered complete only after the player presses the clock (5H). The player's flag may be up after releasing the piece, it may be up while hitting the clock, but if the flag is down after the move and the opponent has not yet handled the clock, the player has failed to make the time control. **For more information** regarding analog and digital flag falls see 5G, The flag.

Except for 9E, there should never be a dispute about whether the final move of a time control or a flag fall occurred first, because a player's task is to press the clock in time to prevent the flag fall. If the flag is down, the player has not accomplished this task, and the director must rule that the move was not completed in time. If the final move of the time control produces checkmate or stalemate, then see 9E.

9G. Determined moves and completed moves.

As described in 9A through 9D above, there is a period between the release of a piece and the press of the clock during which the move is determined but not completed. The significance of this period is as follows (for information on determined moves and the visually impaired or handicapped player see 35F4, Determination of a move):

9G1. Player still on move for claims.

Claims of triple occurrence of position (14C), the 50-move rule (14F), or insufficient losing chances in sudden death (Variation 14H) remain in order during the period between determination and completion of the move. As soon as the player completes the move, it is the opponent's move, and the right to make such claims belongs exclusively to the opponent.

9G2. Determination irrelevant to time control.

In the case of 9F, Last move of the time control, whether or not the player has determined the move is of no significance in deciding whether the player has made the prescribed number of moves in the allotted time. The player's flag must remain up (5G) after the final legal move has been completed, not just determined.

9G3. Draw offers.

Except for 14H2, Resolution of Variation 14H claim, the interval between determination and completion of the move is the proper time to offer a draw (14B1). **See also** 14, The Drawn Game.

TD TIP: *The first step in resolving a properly made draw claim, including an insufficient losing chances (Variation 14H) claim in sudden death, is to notify the opponent of the claimant that a claim is the same as offering the opponent a draw; however, the draw offer is proper even if a move has not been determined or completed. See rule 14, The Drawn Game, for more information on draw claims being considered draw offers.*

9H. Stopping the clock.

If a player determines a move and then stops the clock to see a director for any reason, rather than pressing it, the determined move is not yet completed and the player is still on move for claims (9G1).

10. The Touched Piece

TD TIP: *Without a neutral witness, Rule 10 depends on the reliability of both the claimant and the opponent. If they disagree then the TD should strongly consider denying the claim. In most cases, by denying the claim the TD shuts the door to all false claims. Upholding a false claim usually does more harm to more players than denying an accurate claim.*

10A. Adjustment of pieces.

A player who is on the move and first expresses the intention to adjust (e.g., by saying *j'adoube* or *I adjust*) may adjust one or more pieces on their squares. **See also** [10E, Accidental touch of piece](#) and [10F, appearance of adjustment](#).

10B. Touch-move rule.

Except for [10A](#), a player on move who deliberately touches one or more pieces, in a manner that may reasonably be interpreted as the beginning of a move, must move or capture the first piece touched that can be moved or captured. **See also** [10E, Accidental touch of piece](#); [10F, appearance of adjustment](#); and [35F3](#) (the touch-move rule for blind and disabled players).

***TD TIP:** The key word here is deliberately. Be especially thorough at scholastic events when investigating a “Touch-move rule” claim without a witness. After talking to the claimant and opponent, TDs will find that opponents often insist that they did not “deliberately” touch a piece. Often, after some further discussion, the TD will find that some of the opponents really did physically touch the piece in such a way that it appeared as if they intended to move it (not an accident); however, they will explain that they really intended to move another piece; therefore, they believe that since the “touch” was not literally “deliberate” (since they intended to move another piece), the rule was not broken. The TD will have to uphold the claim in this instance.*

10C. Touching pieces of both colors.

Except for [10A](#), a player on the move who deliberately touches one or more pieces of each color, or who moves the player's piece and intentionally displaces an opponent's piece with it, must capture the opponent's piece with the player's piece, or, if this is illegal, must move or capture the first piece touched that can be moved or captured. If it is impossible to establish which piece was touched first, the player's piece shall be considered the touched piece.

10D. Piece touched cannot move.

If no piece touched has a legal move, and no opponent's piece touched can be legally captured, the player is free to make any legal move.

10E. Accidental touch of piece.

A director who believes a player touched a piece by accident should not require the player to move that piece. For example, a player's hand reaching across the board may inadvertently brush the top of a nearby king or queen, or a player may hit a piece with an elbow. **See also** [10 A, Adjustment of pieces](#); [10B, Touch-move rule](#); and [10F, Appearance of adjustment](#).

10F. Appearance of adjustment.

Sometimes it is clear that a player is adjusting, even when that player improperly fails to say *j'adoube* or *I adjust*. For instance, a player who uses one finger to slide a piece to the center of its square is not acting in a manner usual to the beginning of a move, and probably should not be required to move the piece. Players are warned, though, that it is wise to announce one is adjusting in advance, as a safeguard against being forced to make an unwanted move. **See also** [10 A, Adjustment of pieces](#); [10B, Touch-move rule](#); and [10E, Accidental touch of a piece](#).

10G. Accidental release of piece.

A player who deliberately touches a piece and then accidentally releases it on an unintended but legal square is required to leave it on that square.

10H. Piece touched off the board.

There is no penalty for touching a piece that is off the board. A player who advances a pawn to the last rank and then touches a piece off the board is not obligated to promote the pawn to the piece touched until that piece touches the promotion square. **See also** [8F6, Pawn promotion](#) and [9D, Pawn promotion](#).

10I. Castling.

For description and further information of castling, see [8A2](#), [8A3](#), [8A4](#), [8C1](#), and [9C](#).

10I1. King touched first, or king and rook simultaneously.

If a player intending to castle touches the king first, or king and rook at the same time, and then realizes that castling is illegal, the player may choose either to move the king or to castle on the other side if legal. If the king has no legal move, the player is free to choose any move.

10I2. Rook touched first.

If a player intending to castle touches the rook first, castling is not allowed and the player must move the rook as required by rule [10B](#).

10I2. (Variation I) Rook touched first.

If a player intending to castle touches the rook first, there is no penalty except if castling is illegal, the player must move the rook if legal. This variation does not need to be announced in advanced publicity but should be announced at the start of the tournament.

10J. When to claim touch-move.

To claim the opponent has violated [10B](#), [Touch move rule](#), or [10C](#), [Touching pieces of both colors](#), a player must do so before deliberately touching a piece.

11. Illegal Positions

11A. Illegal move during last ten moves.

If, during a game, it is found that one of either player's last ten moves was illegal and neither player is in time pressure ([11D1](#)), the position shall be reinstated to what it was before the illegal move. The players do not recover the time used after the illegal move. The game shall then continue by applying [Rule 10, The Touched Piece](#), to the move replacing the illegal move. If the position cannot be reinstated, then the illegal move shall stand. Move counters on clocks that have them may be readjusted. **See also** [11H](#), [Director corrects illegal move in non-sudden death](#) and [16R](#), [No time adjustment for reinstated position](#).

***TD TIP:** When the illegal move is a king left in check, special care should be taken by the director. All moves, not just the first move, in which a player's king remains in check should be regarded as illegal. That way, an illegal move will always have occurred within the last half-move; therefore, players cannot argue that the illegal move(s) should stand. Now, go back to the first illegal move that occurred (leaving the king in check). If the moves cannot be reconstructed, go back to a position in which the king is in check, so that the king can get out of check. In complicated cases like this the director has a lot of discretion. No player should gain an unfair advantage for deliberate illegal moves, or for inadvertent ones, which were deliberately not pointed out. Remember that the clock times will not be re-adjusted; however, move counters may need to be reset to the proper move number.*

11B. Illegal move prior to last ten moves.

If it is found that an illegal move was made prior to each player's last ten moves, the illegal move shall stand and the game shall continue.

***TD TIP:** When the illegal move is a king left in check see the TD TIP after rule [11A](#).*

11C. Accidental piece displacement.

If, during a game, one or more pieces have been accidentally displaced and incorrectly replaced, then the displacement shall be treated as an illegal move. If, during the course of a move, a player inadvertently knocks over one or more pieces, that player must not press the clock until the position has been reestablished. The opponent may press the clock without moving, if necessary, to force the player who knocked over the piece(s) to restore the position on his or her own time. If possible, clocks with move counters should be readjusted.

TD TIP: *If using increment time control it may not be to a player's advantage to start the opponent's clock if the opponent created an illegal position or accidentally displaced pieces. In that case the players may stop or pause the clock until the correct position is reinstated.*

11D. Illegal move.

If a player completes an illegal move by pressing the clock, in addition to the usual obligation to make a legal move with the touched piece if possible, the standard penalty specified in rule 1C2a applies. If the opponent has completed a move subsequent to the illegal move, the standard penalty shall not apply. **See also 11J, Deliberate illegal moves.**

TD TIP: *A player should make sure to claim an illegal move made by his opponent before completing his next move, in order to be eligible to receive the additional time.*

11D1. Illegal move in time pressure.

Time pressure is defined as a situation where either player has less than five minutes left in a time control and the time control does not include an increment or delay of 30 seconds or more. A director should not call attention to illegal moves in *time pressure*, only the players may make that claim. If, during the game, in time pressure, a player's claim that one of either player's last two moves was illegal is upheld by the TD, the position shall be reinstated to what it was before the illegal move and the procedure in rule 11A shall be followed. **See also 11H, Director corrects illegal move outside of time pressure; and 11J, Deliberate illegal moves.**

TD TIP: *When the illegal move is a king left in check see the TD TIP after rule 11A.*

11E. Incorrect adjourned position.

If, after an adjournment, the position is incorrectly set up, then the position as it was at adjournment must be set up again and the game continued, subject to the provisions of [Rule 11A, Illegal move during last ten moves](#). The time on the clocks shall not be adjusted; however, move counters on clocks that have them may be readjusted. **See also 16R, No time adjustment for reinstated position and 19I, Game resumed with incorrect position.**

11F. Incorrect initial position.

If, before the completion of Black's 10th move, it is found that the initial position of the pieces was incorrect, or that the game began with the colors reversed, then the game shall be annulled and a new game played. However, the players shall begin the new game with their clocks still reflecting the elapsed time each player used in the annulled game; however, move counters on clocks that have them may be readjusted. If the error is discovered after the completion of Black's 10th move, the game shall continue. **See also 16R, No time adjustment for reinstated position.**

11G. Incorrect placement of chessboard.

If, during a game, it is found that the board has been placed contrary to [2C, Placement](#), which requires a white square in the nearer corner to the right of each player, then the position reached shall be transferred to a board correctly placed and the game continued.

11H. Director corrects illegal move outside of time pressure.

Except in a time pressure situation ([11D1](#)), a director who witnesses an illegal move being made shall require the player to replace that move with a legal one in accordance with [10B, Touch-move rule](#). The time on the clocks shall not be adjusted; however, move counters on clocks that have them may be readjusted. **See also 11J, Deliberate illegal moves and 21D, Intervening in games.**

Variation 11H1. Director as witness only.

In an event in which most games are not watched by directors, a director may refrain from correcting all illegal moves he or she may notice but simply serve as a witness should one of the players point out the illegal move before ten more moves have been made ([11A](#)).

If used, this variation must be applied consistently; i.e., a director may not require players to correct illegal moves when witnessed in some cases but not in others. This variation does not need to be announced in advance.

11I. Spectators.

Spectators must not point out illegal moves (20M5), except to the director in a manner neither heard nor noticed by the players. **See also** 16Y, [Assisting players with time management prohibited](#) and 20M, [Behavior of spectators](#).

11J. Deliberate illegal moves.

If a player intentionally makes illegal moves, the director may impose penalties. **See also** 1C2, [Director discretion](#); 11D, [Illegal move](#); 21F, [Player requests for rulings](#); and 21K, [Use of director's power](#).

12. Check

12A. Definition.

The king is *in check* when the square it occupies is attacked by one or more of the opponent's pieces; such pieces are said to be *checking the king*. Check is parried (a player gets out of check) by capturing a sole checking opposing piece, interposing one of the player's own pieces between a sole checking piece and the king (not possible if checking piece is a knight), or moving the king. The king cannot parry check by castling (8A4).

12B. Double check.

The square occupied by the king being attacked by two opposing pieces is known as *double check*, and may be parried only by moving the king. The king cannot parry double check by castling (8A4).

12C. Responding to check.

Check must be parried on the move immediately following. If a player's king is unable to escape check, it is *checkmated* and the player loses the game (13A).

12D. Check by interposing piece.

A piece blocking a check to the king of its own color, commonly referred to as *interposing*, can itself give check to the enemy king.

12E. Moving into check.

A player may not move the king, including castling (8A4), to a square attacked by one or more opponent's pieces. No move may be made by any piece which puts the player's own king in check. If a player does so, it is an illegal move. **See also** 11, [Illegal Positions](#).

12F. Calling check not mandatory.

Announcing check is not required, and is rare in high-level tournaments. It is the responsibility of the opponent to notice the check, and a player who does not may suffer serious consequences. A player may announce check. **See also** [Rule 10, The touched piece](#).

13. The Decisive Game

13A. Checkmate.

The player who checkmates the opponent's king, providing the mating move is legal, wins the game. This immediately ends the game. **See also** 4A, [Checkmate](#); 9E, [Checkmate or stalemate](#); 12C, [Responding to check](#); and 15H, [Reporting of results](#).

TD TIP: *This means that anything that happens after the checkmate move has been legally determined (see rule 9, Determination and completion of the move) is irrelevant to the outcome of the game, including the player's flag falling (5G).*

13A1. The clock after checkmate.

A player who checkmates the opponent is not obligated to then press (5H) or stop (5I) the clock, as checkmate takes priority over a subsequent flag fall. A player delivering checkmate may choose to press the clock to minimize the possibility of dispute. **See also** 9E, [Checkmate or stalemate](#).

13A2. Flag fall before checkmate.

If a player claims a win by time forfeit (13C) before the opponent determines a move delivering checkmate, the time forfeit claim is appropriate.

13A3. Unclear if checkmate or flag fall came first.

After considering all available evidence, including testimony by the players and any witnesses, a director who is still unable to decide whether the claim of the flag fall occurred first shall deny the time claim and rule the checkmate valid.

13B. Resignation.

The player whose opponent resigns wins the game. This immediately ends the game. Saying *I resign* or tipping over the king are relatively clear ways to resign.

Stopping both clocks does not necessarily indicate a resignation. Since a player may be making a claim or seeing a director, the opponent should not assume a player who stops both clocks has resigned without further evidence.

Likewise, the offer of a handshake is not necessarily a resignation. On occasion, one player believes the handshake agrees to a draw while the other interprets it as a resignation. **See also** 15H, [Reporting of Results](#); 16S, [Priority of agreed result over time-forfeit claim](#) and 19G2, [Resignation and invalid move](#).

13C. Time forfeit.

- a. Non-Sudden Death: The player who properly claims that the opponent has not completed the prescribed number of moves in the allotted time wins the game, provided that the claimant has mating material (14E) and a reasonably complete scoresheet (13C7) when the flag falls (5G). Move counters, on clocks equipped with them, may not be used as the only evidence in claiming that the prescribed number of moves were not completed in the allotted time.
- b. Sudden Death: The player who properly claims that the opponent has not completed the game in the allotted time, and has mating material (14E), wins the game. A scoresheet is not required to win on time in a sudden death time control (15C).

See also 15H, [Reporting of results](#) and 19G3, [Loss on time and invalid move](#).

13C1. Only players may call flag.

Only the players in a game may call attention to the fall of a flag (See also 5G); it is considered to have fallen only when either player points this out. A director must never initiate a time-forfeit claim.

Spectators, including players of other games, who point out the fall of a flag in any manner, may be disciplined by the tournament director to the point of expulsion from the playing room, loss of their own games, or expulsion from the tournament. The recipient of such assistance may also be penalized (20E). **See also** 16Y, [Assisting players with time management prohibited](#); 20E1, [Solicited advice](#); 20E2, [Unsolicited advice](#); 20M, [Spectators](#); and 20M5, [Spectators cannot make claims](#).

TD TIP: The key word here is “may.” Directors must exercise extreme caution in penalizing unsolicited advice. Reviewing [Rule 20E, Soliciting or using advice prohibited](#), before making a ruling is advised. Remember in FIDE competitions the arbiter can call the flag, and should do so.

13C2. Player may call own flag for protection in non-sudden death.

A player may call attention to the fall of his or her own flag. This initiates the time forfeiture procedure, the same as if the opponent had made a claim. A player will likely exercise this option in order to make it clear that any moves the opponent may subsequently fill in or correct on the scoresheet are invalid for the purpose of having an adequate score. **See also** 13C3, [Filling in moves with flag down](#).

TD TIP: This rule was designed to protect the player who is short of time, in a non-sudden death time control, from an opponent, who has plenty of time to write down moves as they are being made, who instead “blitzes” or rushes, move after move without filling in a scoresheet contrary to [15A, Manner of keeping score](#).

13C3. Filling in moves with flag down.

Once either player points out the fallen flag, neither is permitted to fill in or correct any previous moves missing from the scoresheet. It is especially important that a player who expects to win on time not fill in missing moves. Such additions or corrections are not considered for the purpose of determining whether the scoresheet is reasonably complete ([13C7](#)), and may obscure a valid claim.

TD TIP: Enforcement of this rule often depends on an independent witness.

13C4. Consequence of filling in moves.

A player who improperly fills in missing moves after a fallen flag has been pointed out may not win by time forfeit unless the director is certain that the player’s scoresheet would have been sufficient to win on time without the improper additions. A director who is unsure on this point should give the benefit of the doubt to the opponent of the claimant.

TD TIP: Enforcement of this rule often depends on an independent witness.

13C5. How to claim.

To claim a win by time forfeit, a player should stop both clocks ([5I](#)) and state the claim. If the opponent accepts the claim, the game is over. If the opponent does not accept the claim, the claimant must present the claim to a director.

13C6. Claimant’s clock.

If a player who claims a time forfeit states the claim with claimant’s flag still up ([5G](#)), but then fails to stop the clock in time to avoid also exceeding the time limit, the claim will be void, unless the flag fall was observed by a director or independent witness. **See also** [5I, Stopping the clock](#); [13C13, Player out of time cannot claim](#); [16Q, Interruption of game](#); [21F, Player requests for rulings](#); [21F1, Timing of requests](#), and [16T, Both players exceed time control](#).

TD TIP: A director who is aware that a claimant has neglected to stop the clock should instruct the claimant to do so.

13C7. Definition of reasonably complete scoresheet.

Unless otherwise posted or announced in advance at the site, a reasonably complete scoresheet is one that has no more than three missing or incomplete move pairs (consecutive moves, white and black or black and white). The absence of three consecutive individual moves, e.g. white-black-white, counts as two incomplete move pairs.

The move pair is considered incomplete if either side’s move is omitted or incomplete. No move pair is ever considered to be *half complete*.

Minor ambiguities in scorekeeping or errors involving no more than one symbol are of no consequence. The common error of omitting one move by one player and subsequently putting moves in the wrong columns counts as only one error. Moves that are indecipherable or recorded only with check marks are considered missing. **See also:** [15, The recording of the games](#).

TD TIP: An example of a minor ambiguity would be for the player of the black pieces to write Nf3 on a scoresheet in place of Nf6 in the opening when Nf3 is clearly not even possible.

13C8. Use of opponent’s scoresheet in non-sudden death.

The director may use the scoresheet of the claimant’s opponent to determine that the requisite number of moves has been made or that the claimant’s scoresheet is in error. The director may also use the opponent’s scoresheet to assist in playing over the game. No player, however, may be forfeited based solely on the evidence of his or her own scoresheet.

13C9. Player may demonstrate making time control in non-sudden death.

If the opponent of the claimant demonstrates that the required number of moves must have been made in order to reach the position on the board, the director shall deny the claim.

***TD TIP:** If the opponent points out the correct number of moves have been made to reach the position on the board due to move repetitions, but does not have an accurate score or an independent witness to verify this fact, the director should rule in favor of the claimant.*

13C10. Director not obligated to play over game in non-sudden death.

If the claimant's scoresheet appears to be sufficiently complete and both scoresheets appear to be substantially identical and agree on the number of moves made, the director need not play over those moves but may instead require the player whose flag has fallen (5G) to demonstrate why the opponent's scoresheet is not sufficient to win on time.

13C11. Time forfeit claim denied in non-sudden death.

If a flag is down but a claimant's scoresheet is insufficient to win on time, two minutes shall be added to the claimant's opponent's remaining time and the game shall continue. No further time forfeit claims during that time control are allowed; a claim of time forfeit shall be allowed during subsequent time controls.

***TD TIP:** Example: In a 40/120 20/60 game, if a time forfeit claim for the first time control is denied on move 35, then another time forfeit claim is not available for either player (13C13) until the end of the second time control (at flag fall after three hours by one player).*

13C12. Both scoresheets inadequate in non-sudden death.

If both players agree that sufficient moves have been made or that both scoresheets are inadequate for time forfeit claims, and it is impossible to establish the exact number of moves, no further claims on that time control are permitted. The subsequent time control period is in effect. The players should diagram or create a record of the position to serve as a reference point for future claims.

13C13. Player out of time cannot claim.

A player whose own flag has fallen (5G) may not win on time during that control. **See also** 16T, Both players exceed time control.

13C14. Role of director during time trouble.

It is beneficial for a director to be present in an area with games in which the players are in time trouble, to observe the players and safeguard against disturbance such as spectators or players talking or crowding too close to a game. However, it is not recommended that directors concentrate on watching clocks except to tell when they may go back to other duties. This would accomplish little, as only players may call flags down, and a fallen flag (5G) constitutes evidence equal in value to the witnessing of a falling flag. **See also:** 13C6, Claimant's clock.

13C15. Variations.

Any variations on these procedures, such as use of FIDE methods that require a director or deputy to be present at each board and to claim time forfeits on behalf of the players, must be clearly announced before the start of the tournament.

13D. Late arrival for game.

The player who arrives at the chessboard more than one hour late for the beginning of the game or arrives after the expiration of the first or only time control period, whichever comes first, loses the game. The absence countdown begins at the actual starting time of the round, which is not always the scheduled starting time. A director who learns that a player is unavoidably delayed may waive the one-hour forfeit rule. **See also** 13F, Late arrival by both players; 15H, Reporting of results; 16K, Both players late; 16M, Equipment needed to start clock; 22A, Games forfeited due to nonappearance; and 28P, Unplayed games.

TD TIP: Example in a single sudden death time control: if the time control is G/30 then a player who arrives 31 minutes after the start of that game will lose. A player who arrives at any time before the flag falls may play the game with whatever amount of time is left on the player's clock.

Variation 13D1. Equipment must be set up.

To win under 13D, a player must set up a board, a set, and a clock, start the opponent's clock, and run the clock until the opponent has one hour of elapsed time or the first or only time control period has expired, whichever comes first. If both players are late, the first to arrive must split the elapsed time from the start of the game until the arrival time before starting the opponent's clock (see 16K, [Both players late](#)).

TD TIP: For example, if the first player is 30 minutes late in a non-sudden death time control period of 40/120, each player would start with 15 minutes elapsed, and the second player would not lose on time, due to non-appearance, until 45 minutes later. Another example: in a G/30 single sudden death time control, or one that is less than one hour, the first player arrives 10 minutes late. Each player would start with 5 minutes elapsed. The second player would not lose on time, due to non-appearance, until 25 minutes later.

13E. Late arrival for adjournment resumption.

The player who arrives at the chessboard more than one hour late for the resumption of an adjourned game or arrives after the expiration of the existing time period, whichever comes first, loses the game. A director who learns that a player is unavoidably delayed may waive the one-hour forfeit rule. However, if the player who sealed the move is the late player, the game is decided otherwise if either of the following conditions exists:

13E1. Checkmate.

The absent player has won the game by virtue of the fact that the sealed move produces checkmate.

13E2. Stalemate or insufficient material.

The absent player has produced a drawn game by virtue of the fact that the sealed move has caused a stalemate (14A), or if one of the positions in 14D, [Insufficient material to continue](#), has arisen.

13F. Late arrival by both players.

If both players arrive at the chessboard more than one hour late in a non-sudden death time control period or after the flags have fallen in a single sudden-death time control, whichever comes first, the director may declare the game lost by both players. **See also** 13D, [Late arrival for game](#); 15H, [Reporting of results](#); 16K, [Both players late](#); 22A, [Games forfeited due to nonappearance](#); and 28P, [Unplayed games](#).

13G. Players must give notice if withdrawing or skipping a round.

A player who does not notify the tournament director well in advance of the inability to play in any round and then defaults the game under 13D, [Late arrival for the game](#), may be ejected from the tournament, and may be fined a sum up to the amount of the entry fee, payable to the organizer. The player may be barred from any of the organizer's tournaments until the fine is paid. On request, the player may be retained in or readmitted to the tournament at the director's discretion. **See also** 16K, [Both players late](#); 22A, [Games forfeited due to nonappearance](#); and 28P, [Unplayed games](#).

TD TIP: It is useful to have a withdrawal signup sheet available until the pairings are made for the last round. Directors are urged to check this list before making any pairings.

13H. Sealing of invalid move.

A player who has sealed a move that the director finds has no reasonable interpretation loses the game. However, a director who finds there are two or more reasonable interpretations of an ambiguous sealed move may allow sealer's opponent to choose between the possibilities. **See also** 19G, [Sealed move invalid](#) and 19F, [Sealed move ambiguous](#).

13I. Refusal to obey rules.

The director may declare a game lost by a player who refuses to comply with the rules. If both players refuse to comply with the rules, the director may declare the game lost by both players. **See also** 1C2, [Director discretion](#); 21F, [Player requests for rulings](#); and 21K, [Use of director's power](#).

TD TIP: It is often useful, but not required, to employ the following steps before applying [13I](#) or dealing with a rule that has no specific penalty:

Step 1: The director warns the player who does not comply with the rules.

Step 2: The director adds two minutes, or more if necessary, to the time of the opponent of the player who does not comply with the rules. Some TDs repeat this step more than once.

Step 3: The director enforces [13I](#) after steps 1 and 2 have been unsuccessful in getting a player to comply with the rules.

14. The Drawn Game

All draw claims are also draw offers ([14B](#)). The player by making any draw claim (for example: triple occurrence of position ([14C](#)), insufficient material to continue ([14D](#)), insufficient material to win on time ([14E](#)), the 50-move rule ([14F](#)), both flags down in sudden death ([14G](#)), insufficient losing chances ([Variation 14H](#)), ...) is also making an implied offer of a draw to the opponent. If the opponent accepts the implied draw offer, the game is over.

1. The opponent may immediately accept the draw offer and end the game ([14B](#)), or instead
2. The opponent may ask the director to rule on the claim. If the director upholds the draw claim, the game is over.
3. If the director does not uphold the claim (does not declare the game a draw), the game continues. The implied draw offer is still in effect, and the opponent may accept it or reject it ([14B](#)).

TD TIP: When a draw claim is made, the director should inform the opponent of the draw offer. The opponent need not immediately accept the draw offer. Instead, the opponent may first wait and see what the director rules. The director's ruling might or might not end the game in a draw. If the claim is denied, then the director restarts the game. In restarting the game, the director assesses penalties, if appropriate according to the rules, and starts the clock. The draw claim becomes a [14B](#) draw offer. The director should remind both players of this draw offer when starting the clock.

14A. Stalemate.

The game is drawn when the king of the player to move is not in check and that player has no legal move. This type of draw is called *stalemate*. Providing that the opponent's previous move is legal, this immediately ends the game. Note that it is incorrect to refer to all drawn games as *stalemate*. The draws described in [14B](#) through [14J](#) are not stalemates. See also [9E](#), [Checkmate or stalemate](#); and [15H](#), [Reporting results](#).

TD TIP: This means that anything, including the fall of the flag, which happens after the stalemate move has been legally determined (see [9](#), [Determination and Completion of the Move](#)) is irrelevant to the outcome of the game. Also, remember a [14A](#) stalemate draw claim is a draw offer ([Rule 14, The Drawn Game](#)).

14A1. The clock after stalemate.

Just as with a checkmate, a player who stalemates the opponent is not obligated to then press ([5H](#)) or stop ([5I](#)) the clock, as stalemate takes priority over a subsequent flag fall. A player delivering stalemate may choose to press the clock to minimize the possibility of dispute. See also [9E](#), [Checkmate or stalemate](#).

14A2. Flag fall before stalemate.

If a player claims a win on time ([13C](#)) before the opponent releases a piece that will deliver stalemate, the time forfeit claim is appropriate.

14A3. Unclear if stalemate or flag came first.

After considering all available evidence, including testimony by the players and any witnesses, a director who is unable to determine whether the flag fall occurred first shall deny the time claim and uphold the stalemate.

14B. Agreement.

The game is drawn upon agreement between the two players. This immediately ends the game. **See also** 15H, [Reporting of results](#); 16S, [Priority of agreed result over time-forfeit claim](#); 19G1, [Agreed draw and invalid move](#) and 19J, [Agreed result of adjourned game](#).

14B1. Proper timing of draw offer.

Except for a draw claim, which is an implicit draw offer (14), a player should make a proposal of a draw only after determining a move (9G) and before pressing the clock. The opponent may accept the proposal or may reject it either orally or by deliberately touching a piece (10B). In the interim, the player who made the offer cannot withdraw it. **See also** 9G3, [Draw offers](#).

***TD TIP:** The first step in resolving a properly made draw claim is to notify the opponent of the claimant that all draw claims are the same as offering the opponent a draw ([Rule 14, The Drawn Game](#)); however, a rule 14 draw claim is a proper (inherent) draw offer even if a move has not been determined or completed.*

14B2. Draw offer with opponent on move.

If a player offers a draw while the opponent's clock is running, the opponent may accept or reject the offer. A player who offers a draw in this manner may be warned or penalized for annoying the opponent (20G). **See also** 14, [The Drawn Game](#).

14B3. Draw offer before moving.

A player that proposes a draw before moving must allow the offer to stand until the opponent either accepts or rejects it. Such a proposal, while unlikely to annoy the opponent, can be disadvantageous, as the player may subsequently notice a strong move and regret the inability to withdraw the offer. **See also** 14, [The Drawn Game](#).

The opponent of a player offered a draw in this manner has the right to require the player who offered the draw to move before deciding whether to accept the offer, and may respond, "Make your move first," or words to that effect, or remain silent. In any case, the offer may not be withdrawn.

14B4. Flag fall during pending draw offer.

A player who offers a draw may claim a win on time (13C) if the opponent oversteps the time limit while considering the proposal unless the offer is accepted before the flag fall (5G) is claimed. **See also** 14, [The Drawn Game](#).

14B5. Repeated offers.

Repeated draw offers may be construed as annoying the opponent, and penalties are possible at the discretion of the TD (20G). If the first offer has been declined, it is improper to offer another draw unless the opponent has since offered a draw or the position has changed substantially.

***TD TIP:** It is a good idea for a director to issue a warning before applying any penalties for repeated draw offers.*

14B6. Premature or prearranged draws.

It is unethical and unsporting to agree to a draw before a serious contest has begun. The same is true of all arrangements to prearrange game results. In case of clear violations of the moral principles of the game, penalties should be imposed at the director's discretion. **See also** 20L, [Manipulating results](#).

***TD TIP:** Trying to enforce this rule is difficult. Forcing two players to continue playing when they are resolute on obtaining a result of a draw will produce a sometimes very quick game with many moves resulting in a draw anyhow. Often last-round games may not be prearranged; however, due to prize fund distribution considerations the result can be easily predicted. In cases involving prearranged draws it is wise to have clear and irrefutable evidence before imposing any penalties.*

14C. Triple occurrence of position.

The game is drawn upon a correct claim by the player on the move when the same position is about to appear for at least the third time or has just appeared for at least the third time, the same player being on move each time. In both cases, the position is considered the same if pieces of the same kind and color occupy the same squares and if the possible moves of all the pieces are the same, including the right to castle (8A2, 8A3, 8A4) or to capture a pawn *en passant* (8F5). **See also** 14C8, Sudden death time pressure; 14C9, Claimant's scoresheet; and 15H, Reporting of results.

TD TIP: Remember a triple occurrence draw claim is a draw offer (*Rule 14, The Drawn Game*).

14C1. No repetition of moves or perpetual check draw.

There is no rule regarding a draw by *repetition of moves*. The draw is based on repetition of *position*. The three positions need not be consecutive, and the intervening moves do not matter. There is also no rule regarding *perpetual check*. It is irrelevant whether the claimant of 14C is delivering check or whether the thrice-repeated position involves check.

TD TIP: “Perpetual check” and “three consecutive positions” are often-occurring special cases of 14C, Triple occurrence of position; therefore, claimants need to make a 14C claim in order to try to secure a triple occurrence of position draw when these special cases occur; however, if a player makes a “perpetual check” or “three consecutive positions” claim it is considered first a draw offer (*Rule 14, The Drawn Game*).

14C2. How to claim.

If a move is required to complete the third occurrence of the position, the player claiming the draw under 14C should write this move on the scoresheet but not play the move on the board, stop both clocks (5I), and state the claim. If no move is required to complete the repetition, the player should stop both clocks without moving and state the claim.

In both cases, if the opponent agrees, the game is drawn. If the opponent does not agree, the claimant may make the claim to a director. If a director denies the claim, the claimant is still obligated to play any announced or recorded move. The director awards the opponent two extra minutes. **See also** 14C3, Player must be on move; 14C4, Claim after moving without pressing clock; and 14C7, Irrevocability of claim.

14C3. Player must be on move.

Only a player to move may claim a draw under 14C. If the opponent is on move a player may not claim, and any claim the player may have made before pressing the clock is invalid; however, the claim is then considered a draw offer (14C7). The right to claim is restored to that player if the same position appears again with the same player on move, or if any other position appears for at least the third time with the same player on move. **See also** 14B, Agreement.

14C4. Claim after moving without pressing clock.

A player who moves and then does not press the clock (5H), but allows it to run, retains the right to claim a draw under 14C. However, this procedure is not recommended. The player who moves and allows the clock to run will lose the time that elapses before a ruling if the claim is not upheld. It is preferred that the player stops both clocks (5I) in order to retain the right to claim a draw under 14C.

14C5. Claimant's clock continues to run.

If a player who claims a draw under 14C fails to stop the clocks, the director should instruct the player to stop them.

14C6. Resolution of claim.

If the claim is found to be correct, the game is drawn. If the claim is found to be incorrect, two minutes shall be added to the opponent's remaining unused time.

14C7. Irrevocability of claim.

A player who makes a draw claim under [14C](#) cannot withdraw it; however, it is still considered a draw offer ([14](#)). If a player moves, then claims a draw and presses the clock ([5H](#)), or claims a draw, then moves and presses the clock, the move stands, and this is considered an offer of a draw ([14](#)). **See also** [14B, Agreement](#).

14C8. Sudden death time pressure.

In sudden death, a player with less than five minutes remaining may be awarded a draw by triple occurrence of position based on the observation of a director, deputy, or impartial witness(es). A player may stop both clocks to see a director in order to demonstrate the ability to force a triple occurrence of position. **See also** [14C, Triple occurrence of position](#).

14C9. Claimant's scoresheet.

Except for [14C8](#), the claimant must have a scoresheet adequate ([13C7](#)) to demonstrate the validity of the claim.

14D. Insufficient material to continue.

The game is drawn when one of the following endings exists as of the most recently determined legal move, in which the possibility of a win is excluded for either side. **See also** [15H, Reporting of results](#):

***TD TIP:** Remember a [14D draw claim](#) is first a draw offer ([Rule 14, The Drawn Game](#)).*

14D1. King vs. king.

King vs. king.

14D2. King vs. king with bishop or knight.

King vs. king with bishop or knight.

14D3. King and bishop vs. king and bishop.

King and bishop vs. king and bishop, with both bishops on diagonals of the same color.

14D4. No legal moves leading to checkmate by opponent.

There are no legal moves that could lead to the player being checkmated by the opponent.

14E. Insufficient material to win on time.

The game is drawn even when a player exceeds the time limit if one of the following conditions exists as of the most recently determined legal move. **See also** [15H, Reporting of results](#):

***TD TIP:** Remember a [14E draw claim](#) is first a draw offer ([Rule 14, The Drawn Game](#)).*

14E1. Lone king.

Opponent has only a lone king.

14E2. King and bishop or king and knight.

Opponent has only king and bishop or king and knight, and does not have a forced win.

14E3. King and two knights.

Opponent has only king and two knights, the player has no pawns, and opponent does not have a forced win.

14F. The 50-move rule.

***TD TIP:** Remember a [14F draw claim](#) is first a draw offer ([Rule 14, The Drawn Game](#)).*

***TD TIP:** a [14F draw claim](#) would only use the standards outlined in [14F](#). The standards for a [triple occurrence of position claim](#), particularly [Rule 13C7, Definition of reasonably complete scoresheet](#), do not apply here.*

14F1. Explanation.

The game is drawn when the player on move claims a draw and demonstrates that the last 50 consecutive moves have been made by each side without any capture or pawn move. If the director wishes to allow more than 50 moves for certain positions, details must be posted at the tournament before the first round. **See also** [15H, Reporting of results](#).

14F2. Resolution.

If the claim is found to be correct, the game is drawn. If it is found to be incorrect, two minutes shall be added to the opponent's remaining unused time.

14F3. Winning position irrelevant.

If a valid claim exists, the game is drawn regardless of the position. Even if the opponent can show an immediate checkmate, the game is drawn.

14F4. Director may count moves in sudden death.

In sudden death, a player with fewer than five minutes remaining and a simplified position in which no pawn moves or captures seem likely may stop both clocks, declare to a director an intention to invoke the 50-move rule when possible, and ask for assistance in counting moves. A director who agrees this is appropriate may count moves or use a deputy or a clock with a move counter to do so.

- a. If the director or the deputy will count moves, the count should begin by crediting moves already made and listed on the scoresheet of the player intending to claim. An opponent who believes a different number of moves have been made should present this case if and when the count reaches 50.
- b. The director or deputy may either keep score, make check marks, or combine the two.
- c. After the count by the director or deputy begins, neither player has a right to know the count until 50 moves are reached. At that point the game is declared drawn unless the opponent successfully challenges the move count.
- d. The opponent may challenge either the moves on the claimant's scoresheet before the director/deputy count, the count itself, or both, but must have a scoresheet adequate ([13C7](#)) to support the challenge.
- e. If the challenge is upheld, the game shall continue with the director or deputy resuming from the corrected count. If the claimant's scoresheet is responsible for the wrong count, two minutes shall be added to the remaining unused time of the claimant's opponent. If the director/deputy count was wrong, there shall be no time adjustment.
- f. The director may insert a clock with a move counter that shows the remaining time of both players, set the move counter to zero, and order play to resume. When the clock indicates that both sides have completed 50 further moves, either player may claim a draw. If this method is used, the director should inform the players that if a move is erroneously not counted or double counted, the players should stop the clock and notify the director.

14G. Both flags down in sudden death.

The game is drawn if both flags are down in a sudden death time control and either player points this out. If a player whose flag is still up claims a win on time but does not stop the clock in time to prevent the flag from falling, the game is drawn, unless the flag fall was observed by a director or independent witness. **See also** [14G2, Players apparently unaware of situation](#); [15H, Reporting of results](#); [16T, Both players exceed time control](#); and [16Y, Assisting players with time management prohibited](#).

TD TIP: Remember a [14G draw claim](#) is first a draw offer ([Rule 14, The Drawn Game](#)).

TD TIP: An increment time control of 30 seconds or more is not considered sudden death; therefore, [14G](#) does not apply.

14G1. Checkmate and both flags down.

In a sudden death control, if a player points out that both flags are down prior to a checkmate, the game is drawn. After considering all available evidence, including testimony by the players and any witnesses, a director who is unable to determine whether the claim of both flags down occurred first shall deny the time claim and rule the checkmate valid.

14G2. Players apparently unaware of situation.

If a sudden death game continues with both flags down, the director may rule it a draw. This exception to the standard rule that only players may call flags down is justified by the need to avoid delaying the tournament. [See also 14J, Draw declared by director; 16T, Both players exceed time control; 16Y, Assisting players with time management prohibited; 18G, Adjudications; and 21D, Intervening in games.](#)

***TD TIP:** An increment time control of 30 seconds or more is not considered sudden death; therefore, 14G does not apply.*

14H. Claim of insufficient losing chances in sudden death.

No claim of insufficient losing chances in sudden death will be allowed.

Variation 14H. Claim of insufficient losing chances in sudden death.

This variation need not be announced in advance publicity.

14H1. Explanation.

This procedure is not available for games in which a clock is being used with either the time delay or the increment properly set, whether the game begins with such a clock or one is added during the game ([14H2a](#)). If such a clock is not being used, or such a clock is being used without the time delay or increment feature in operation, the following procedure is available.

In a sudden death time control, a player on the move with two minutes or less of remaining time may stop the clock and may make a claim of insufficient losing chances.

14H2. Resolution of Variation 14H claim.

When ruling, the director should not consider the ratings of those playing. A low-rated player who claims a draw vs. a Master should obtain the same ruling as a Master with the same position who claims a draw vs. a low-rated player. The director should also not consider the times on the clocks. [See also 14H3, Conferring with players.](#)

The director has four possible ways to resolve the claim.

***TD TIP:** Except for rule [5F5](#) there is no rule allowing players to ask for a properly set delay clock to be placed on their game, which would replace an analog clock or a non-delay digital clock. For delay capable clocks not set with delay, see rule [16P1](#). Only the TD can initiate placing a clock with time delay capabilities on a game after a Variation 14H claim has been made and the steps of 14H2 have been applied. As a result, the player wishing to place a time delay clock on the game must first make a Variation 14H claim.*

***TD TIP:** Remember a Variation 14H draw claim is first a draw offer ([Rule 14, The Drawn Game](#)).*

14H2a. The claim is unclear and a delay clock is available for the game.

A director who believes the claim is neither clearly correct ([14H2c](#)) nor clearly incorrect ([14H2d](#)), but is instead uncertain as to the correctness of the claim, may place a delay clock on the game, setting it as follows: The claimant gets half of the claimant's remaining time (rounded to the nearest second); the opponent's time is unadjusted; the time delay is set for the standard delay announced at the start of the tournament. After the claimant's clock is started, the Variation 14H draw request by the claimant becomes a draw offer under [14B3, Draw offer before moving](#). Penalties for rule infractions remain standard. The claimant may win, lose, or draw the game.

14H2b. The claim is unclear and a delay clock is not available for the game.

A director who believes the claim is neither clearly correct (14H2c) nor clearly incorrect (14H2d), but is uncertain as to the correctness of the claim, and does not have a delay clock available, may:

1. Deny the claim while inviting a later re-claim. There is no adjustment of either player's time. After the claimant's clock is started, the Variation 14H draw request by the claimant becomes a draw offer under 14B3, [Draw offer before moving](#). Penalties for rule infractions remain standard. The claimant may win, lose, or draw the game.
2. Watch the game while reserving judgment on the claim. The director should make every effort to resolve the claim before the flag of either player falls (5G). There is no adjustment of either player's time. After the claimant's clock is started, the Variation 14H draw request by the claimant also becomes a draw offer under under 14B3, [Draw offer before moving](#). Penalties for rule infractions remain standard. The claimant may win, lose, or draw the game.

14H2c. The claim is clearly correct.

A director who believes the claim is clearly correct should declare the game drawn. The draw shall be awarded if the director believes that a Class C player would have little chance to lose the position against a Master with both players having ample time. The exact losing chances of any position cannot be calculated, but a director wishing a more precise standard may consider little to mean less than 10 percent. A director unsure whether a position meets the above standard should use option 14H2a or 14H2b. **See also** 14I, [Advice on claims of insufficient losing chances in sudden death under rule Variation 14H](#).

14H2d. The claim is clearly incorrect.

A director who believes the claim is clearly incorrect should deny the claim and may subtract up to one minute from the claimant's remaining time. After the claimant's clock is started, the Variation 14H draw request by the claimant also becomes a draw offer under 14B3, [Draw offer before moving](#). Penalties for rule infractions remain standard. The claimant may win, lose, or draw the game. **See also** 14I, [Advice on claims of insufficient losing chances in sudden death under rule Variation 14H](#).

TD TIP: *If a director chooses to resolve the claim by enforcing 14H2a, The claim is unclear, a delay clock is available for the game, or 14H2b, The claim is unclear, a delay clock is not available for the game, then the director should inform the claimant and opponent that when the claimant's clock is started that rule 14B3, Draw offer before moving, is in effect. The opponent has the right to ask the claimant to make a move before the draw offer is rejected or accepted by the opponent; however, if the claimant makes a checkmating (13A) or stalemating (14A) move, the game is over.*

TD TIP: *Applying rule 14H2a, The claim is unclear, a delay clock is available for the game, is the preferred method of resolving a Variation 14H claim for directors who wish to ensure the result of the game is determined by the players, rather than any outside influence.*

14H3. Conferring with players.

A director who is unsure how to rule may confer privately with either player or with both players separately regarding the player's plans. The director should be careful not to say anything that might assist the player if the game is resumed.

14H4. Player with fallen flag may not claim.

A player whose flag is down (5G) may not claim insufficient losing chances.

14H5. Delay Clock, a clock with time delay capabilities, or Increment clock, a clock with increment capabilities.

If either a properly set Delay Clock (5F) or a properly set Increment Clock is used, [Variation 14H](#) and 14I are not in effect; i.e., no claim of insufficient losing chances may be made. The reaction time provided for by the delay or the added increment time for each move is likely to be sufficient for a player with insufficient losing chances to hold the position.

14I. Advice on claims of insufficient losing chances in sudden death under Rule Variation 14H.

14I1. Consulting strong players.

If the director is unsure about how to rule on a [Variation 14H](#) claim, the director may consult a Master or near-Master who has no stake in the outcome of the game in question. The director should be careful to explain the conditions of [Variation 14H](#) to such a player.

14I2. Types of positions.

In complex positions often neither side has a valid claim, while in simple positions both sides may have one. For instance, with much material on the board a Master may be down a piece without compensation but still has better than a small chance to beat a C player. But in endings such as described in [14I3](#), even a player behind in material should sometimes be awarded the draw.

14I3. Opposite-colored bishop endings.

In some opposite-colored bishop endings (one player having a light-squared bishop and the other player a dark-squared bishop) with most or all pawns fixed, a Master, even if a pawn or two ahead, may have little chance to outplay a C-player; these positions should be ruled draws.

14I4. Queen vs. queen, rook vs. rook.

With no pawns and queen vs. queen or rook vs. rook, the draw should be awarded unless it is one of the rare positions in which there is a quick forced win. If the claimant has additional material and the opponent does not, the ruling should still ordinarily be a draw.

14I5. Bishop or knight vs. rook, rook vs. rook and knight, queen vs. queen and bishop or knight.

With no pawns the player behind in material should not be awarded a draw, but it may be appropriate for the director to apply [14H2a](#) or [14H2b](#).

14I6. King vs. king, rook pawn, and possibly bishop.

A player with a lone king should be awarded a draw vs. king and rook pawn, or king, rook pawn, and bishop controlling squares of the opposite color than the promotion square, if the claimant's king can stop the pawn from promoting. As in [14I4](#) and all other such cases, if the claimant has additional material, the ruling should still ordinarily be a draw.

14I7. Rook vs. rook and bishop.

With no pawns, unless there is an immediate win of material or an unusual problem position, a draw claim with a rook vs. opponent's rook and bishop should be denied in accordance with [14H2d](#). The claim is clearly incorrect.

14J. Draw declared by director.

On rare occasions the director may encounter a situation in which a ruling is required and a decision in favor of either player would be unfair to the opponent (for examples see [20E2d](#) and [20E2h](#)). In such situations the director may rule a draw on the grounds that this is more equitable (i.e., less inequitable) than any other ruling. A draw may also be ruled in cases like [19E, Sealed move envelope missing](#), if the director recalls that the position was about equal but does not remember the exact position or clock times. **See also** [1C2, Director discretion](#); [14G2, Players apparently unaware of situation](#); [16T, Both players exceed time control](#); [16Y, Assisting players with time management prohibited](#); [18G, Adjudications](#), [21D, Intervening in games](#); and [21K, Use of director's power](#).

14K. Director declares draw for lack of progress.

If one or both of the following occur(s) then the TD may declare the game drawn:

1. The same position has appeared, as in [14C](#), for at least five consecutive alternate moves by each player.
2. Any consecutive series of 75 moves have been completed by each player without the movement of any pawn and without any capture. If the last move resulted in checkmate, that shall take precedence

15. The Recording of Games

15A. Manner of keeping score.

In the course of play each player is required to record the game (both the player's and the opponent's moves), move after move, as clearly and legibly as possible, on the scoresheet prescribed for the competition. Algebraic notation is standard, but descriptive or computer notation is permitted. The player must first make the move, and then record it on the scoresheet. The scoresheet shall be visible to the arbiter (tournament directors) and the opponent throughout the game. **See also** Chapter 3, Chess Notation; 13C3, Filling in moves with flag down; 13I, Refusal to obey rules; 35F6, Scorekeeping options; and 43, Scoresheets.

TD TIP: While the rule's wording indicates making the move first and keeping the scoresheet (paper or electronic) visible at all times, it brings US Chess in alignment with FIDE procedures and soothes many of the fears surrounding electronic scoresheets—see Rule 43—it is a huge change for many players. TDs are advised to first (and possibly second and third) issue warnings to players that do not comply with this revised rule before enforcing any time penalties (1C2a. prescribes adding two minutes to the opponent's unused time).

15A. (Variation I) Paper scoresheet variation.

The player using a paper scoresheet may first make the move, and then write it on the scoresheet, or vice versa. This variation does not need to be advertised in advance. The scoresheet shall be visible to the arbiter (tournament directors) and the opponent throughout the game.

TD TIP: TDs may penalize a player that is in violation of 20C, *Use of notes prohibited* if the player is first writing the move and repeatedly altering that move on their scoresheet before completing a move on the board.

TD TIP: When TDs enforce the “visible scoresheet” portion of this rule they are advised to first warn players that do not make their scoresheet (or score keeping device) visible to the TD and their opponent.

15A1. Players unable to keep score.

- Players determined by the director to be unable to keep score due to physical handicaps may have assistance in scorekeeping as described in 35F, *Rules for visually impaired and disabled players*, and should be excused from scorekeeping if such assistance is unavailable.
- Players determined by the director to be unable to keep score for religious reasons may be excused from scorekeeping or permitted to have assistance as in 35F, *Rules for visually impaired and disabled players*, at the director's discretion.
- Beginners who have not learned to keep score may be excused from scorekeeping, at the director's discretion.

Players excused from scorekeeping are not entitled to make claims that require scoresheets; those who have assistance retain such rights.

TD TIP: Directors often deduct time from the clocks of players at the start of the game whom they excuse from keeping score (the most common example would be that of a player excused from keeping score for genuine religious reasons). Their opponents will need to give up thinking time in order to keep score, which the excused player need not do. A good rule of thumb is to deduct 5% of the total game time allotted for each individual player, up to 10 minutes, from the player's clock that is excused from keeping score. Unless a clock is being used that can be set with seconds as well as minutes and hours (usually a digital clock), partial minutes should be rounded to the nearest minute. For example, in a 20/60 SD/30 contest the player excused from keeping score would lose 5 minutes ($5\% \times 90 \text{ minutes} = 4.5 \text{ minutes}$, rounded to 5 minutes) on an analog clock and 4.5 minutes on a digital clock with that capability. In a 30/60 SD/60 game that same player would lose 6 minutes ($5\% \times 120 \text{ minutes} = 6 \text{ minutes}$) on both an analog and digital clock. In a G/45 contest that same player would lose 2 minutes ($5\% \times 45 \text{ minutes} = 2.25 \text{ minutes}$, rounded to 2 minutes) on an analog clock and 2.25 minutes on a digital clock with that capability. A 40/120 20/60 game can exceed 200 minutes of playing time, as long as 20 moves are made every hour after the first

time control; therefore, that same player would lose no more than 10 minutes ($5\% \times 200 \text{ minutes} = 10 \text{ minutes}$ or $5\% \times 300 \text{ minutes} = 15 \text{ minutes}$, which is rounded to 10 minutes because it exceeds the 10 minute maximum limit).

15B. Scorekeeping in time pressure, non-sudden death time control.

If either player has less than five minutes remaining in a non-sudden death time control and does not have additional time (increment) of 30 seconds or more added with each move, both players are excused from the obligation to keep score until the end of the time control period. Doing so, however, may make it impossible to claim a draw by triple occurrence of position (14C) or the 50-move rule (14F) or a win on time forfeit (13C). Scorekeeping by both players must resume with the start of the next time control period, and missing moves should be filled in (15F).

***TD TIP:** Only players in games with increment time controls of 30 seconds or more and using properly set increment capable clocks are required to keep score at all times, even in the last five minutes of any time control period. Players using improperly set increment clocks or non-increment capable clocks, even those clocks adjusted for an increment time control, are regulated by Rule 15B*

15C. Scorekeeping in time pressure, sudden death time control.

If either player has less than five minutes remaining in a sudden death time control and does not have additional time (increment) of 30 seconds or more added with each move, both players are excused from the obligation to keep score. A scoresheet is not required to win on time in a sudden death control (13C).

***TD TIP:** Only players in games with increment time controls of 30 seconds or more and using properly set increment capable clocks are required to keep score at all times, even in the last five minutes of any time control period. Players using improperly set increment clocks or non-increment capable clocks, even those clocks adjusted for an increment time control, are regulated by Rule 15C.*

15D. Use of opponent's scoresheet for assistance.

A player who has an incomplete scoresheet (13C7) and wishes to consult the opponent's scoresheet for assistance may ask to borrow it from the opponent under the following conditions:

15D1. Clock times.

Both players have at least five minutes remaining in the current time control.

15D2. Borrower's clock runs.

The clock of the player making such a request is running and shall continue to run until the scoresheet has been returned.

15D3. Compliance.

The opponent is urged to comply with such a request, but this is not mandatory. If the opponent denies the request, the player may stop both clocks and see a director. A director who agrees that the request is appropriate shall instruct the opponent to lend the player the scoresheet. The opponent may not refuse as all scoresheets belong to the organizers. **See also 15G, Ownership of scoresheets.**

15D4. Excessive requests.

Repeated requests of this type may be deemed by the director to be inappropriate, and the offender may be penalized under 20G, [Annoying behavior prohibited](#).

15E. Borrowing not needed.

A player who is able to read the opponent's scoresheet without borrowing it is free to use the information gained for assistance in keeping score.

15F. Reconstruction after time control.

After the end of a time control, if the next control is not sudden-death, each player must make all efforts to fill in any missing moves on that player's scoresheet.

15F1. Reconstruction of scoresheet by one player.

After the completion of a time control, a player who alone has to complete the scoresheet must do so before making another move, and with that player's clock running if the opponent has made a move. An additional set and board may be used.

15F2. Reconstruction of scoresheets by both players.

After the completion of a time control, if both players need to complete their scoresheets, the clocks should be stopped until they are completed. Additional chess sets and boards may be used. This does not apply if the director rules that it is unnecessary. **See also 15F4, Reconstruction when the next time control is sudden death.**

15F3. Reconstruction impossible or unnecessary.

If it is impossible or unnecessary to reconstruct the moves as prescribed above, the game shall continue. The players should make a clear diagram of the position reached, and the next move played will be considered the first one of the following time control unless the players agree that a later move number has been reached.

***TD TIP:** For example: in a 40/90 20/30 game both players were in time trouble in the first time control and blitzed off many moves. Both players agree that they made time control but cannot reconstruct the game to reach the current board position. The position is diagrammed and the players continue from that position with the next move by White being move number 41 (or another move number greater than 40 if both players agree). The scoresheet from that point forward is considered complete (13C7) in order to make any claim including a draw by triple occurrence of position (14C) or the 50-move rule (14F) or a win on time forfeit (13C).*

15F4. Reconstruction when the next time control is sudden death.

Upon making the time control, if the next control is sudden death, it is less important to fill in the missing moves. The director has the option of waiving the requirement of reconstructing.

15G. Ownership of scoresheets.

The scoresheets of all games in a tournament are the property of the sponsoring organization(s). If the organizer requires that a copy of each game score be submitted by the players, duplicate scoresheets must be provided, and players who fail to submit scoresheets may be penalized.

15H. Reporting of results.

When a game is completed, the result must be immediately reported in the manner required by the director. Both players, not just the winner, are responsible for registering the result. If they do not do so, they may each be penalized. **See also 29H, Unreported results.**

15I. Results reported incorrectly.

If the director learns of the correct result for any just-completed round either before or just after pairings have been made for the next round, the director should correct the pairings if this can be done without disturbing too many games already in progress. The correction may either be based on the correct result or on treating the incorrectly reported result as an unreported result (29H), at the director's discretion. Whichever of these is chosen, the result must be corrected before pairing subsequent rounds, if any, and the corrected result shall be used for prize purposes.

If the error occurred in an earlier round, other than the round described above, the director shall still proceed as above, but has discretion as to whether to use the correct result or the incorrect result for prize purposes. This decision should be based on how much earlier in the tournament the error occurred and how many pairings were affected.

***TD TIP:** Sometimes errors occur in the reporting of game results. Those errors need to be corrected immediately. Fortunately the same methods used to correct unreported game results also work very well for incorrectly reported game results. The difficulty arises when incorrectly reported results do not come to the director's attention until after several rounds, or even the end of the tournament. As long as there is no chance of a prize being involved, correcting the results is easy. When prizes or a chance to win a prize are involved the director should take care. Correcting incorrectly reported results that cause a player, paired in easier score groups for many rounds, to*

suddenly qualify for a prize seems unfair. It is the player's responsibility to check the wall charts for errors. While there is no question that such an incorrect result should be rated, the director needs to decide on a case-by-case basis whether or not to allow the new correct results to affect the awarding of prizes.

16. The Use of the Chess Clock

16A. Allowable time controls.

The US Chess office maintains a list, available on request, directly from the US Chess office or at www.uschess.org, of the currently allowable time limits for different types of tournaments. **See also** [5C, Ratable time controls](#).

16B. How to set clocks.

16B1. Analog clocks.

Clocks should be set so that each unit will register six o'clock when the first time-control period expires. If there is a second time control of any length of one hour or less it should expire at seven o'clock (even if that requires that the clocks be reset), a third such control at eight o'clock, etc. **See also** [5F1a, Increment capable clock not available](#); [5F2a, Delay capable clock not available](#); [35F5, Special Clock](#).

16B2. Digital clocks.

Time delay or increment clocks should be set according to the manufacturer's directions so that any visual device used to indicate that a player's time has been exhausted for all time control periods is activated. Such mechanisms may include one or more of a light, a display of all zeros, or a display of a flag. Players should explain the flag fall mechanism and the clock's operation to their opponents. The time delay or increment should be set according to the director's instructions, with the time delay or increment in force starting at move one ([5E1](#)) unless the time control specifies otherwise. Clocks equipped to do so should be set for a Bronstein or a delay mode for delay controls or for Fischer, added time, or increment mode for increment time controls.

TD TIP: *Not all digital clocks correctly give the increment for move one when you set increment on the clock. For clocks that don't, the increment time in seconds should be added manually to the base time, if possible, so each player gets the increment for move one. For example, for G/3;inc2, each player gets 3.02 (three minutes and two seconds) to complete move one. If the clock only gives 3.00 for each player's first move when the clock is set—with a base time of three minutes and increment of two seconds—then, if possible, two seconds should be added to each player's base time when setting the clock. If a game is started without the increment applied for move one, it is recommended that the TD not allow the clock to be subsequently adjusted to add the increment for move one. This failure to adjust the clock initially should not be allowed as grounds to contest a later time forfeit claim.*

16B2a. Sound.

Digital clocks must be set to produce no sound. This includes, but is not limited to: beeping when a player has run out of time in the final time control; beeping when a player reaches the end of any time control; warning beeps to indicate a player is approaching the end of a time control; and beeping when a player presses the clock. A digital clock that can be set to produce no sound is preferable to a clock that cannot.

16B2b.

Clock of player not out of time continues to run. If possible, digital clocks must be set so that when one player runs out of time in a time control, the opponent's clock continues to run normally. This capability is variously called "halt on end," "claim mode," or "freeze." A digital clock that can be set to satisfy the requirement of this rule is preferable to a clock that cannot.

16B2c.

Players are responsible for setting clock correctly. Players are responsible for knowing how to set their own clocks to conform to rule [16B2](#). Players should be prepared to explain the clock's operation to the opponent before the start of the game. This includes how the clock indicates a player has run out of time and how to pause both clocks if necessary to summon a director. **See also** [5F7, Players responsible for knowing how to set the clock](#).

For more information on delay or increment clocks see [Chapter 4, Equipment Standards](#); [5F, Standard Timer](#); [35F5, Special clock](#); [42B, Digital clocks](#); [42D, Delay clock preferable](#); and [42E, Increment clock preferable in increment time controls](#).

TD TIP: Directors are not expected to know how to set all digital clocks ([5F](#)).

TD TIP: Some players due to incapacity or due to religious reasons cannot use some types of clocks such as electric, electronic or with digital displays. After a director determines that such conditions are genuine, an analog clock is permissible. Some players for the same reasons cannot use a clock at all. In such cases, the opponent may be asked, but not required, to press the clock on behalf of both players, a method that some TDs report has worked well. The TD may also require such a player to provide an assistant, or may help such a player find an assistant among spectators or players with byes. Directors often deduct time from the clocks of players excused from setting and pressing the clock. See also the TD TIP after [15A1, Players unable to keep score](#).

16C. Removing a player's hand from clock.

Players must remove their hands from the clock button after depressing the button and must keep their hands off and away from the clock until it is time to press it again. See also [5H, Pressing the clock](#).

16C1. Using the clock.

Each player must operate the clock with the same hand that moves the pieces.

16C2. Picking up clock.

Each player is forbidden to pick up the clock.

16D. Special rules for time pressure.

See [11D1, Illegal move in time pressure](#); [15B, Scorekeeping in time pressure, non-sudden death time control](#) and [15C, Scorekeeping in time pressure, sudden death](#).

16E. When flag is considered down.

The flag is considered to have fallen when either player points this out. See also [5G, The flag](#) and [13C1, Only players may call flag](#).

16F. Evidence provided by flag.

In the absence of an evident defect in the clock or flag mechanism, the fallen flag ([5G](#)) is considered as proof that the time-control period has ended or that time has run out for that time period. See also [16G, Premature flag fall](#) and [16H, Apparent flag fall can cause forfeit](#).

16G. Premature flag fall.

- a. With an analog clock, if a clear white space shows between the right side of the minute hand of the clock and the left side of the 12 marker on the clock's face, the flag is considered to have fallen prematurely.
- b. With a delay clock, if the device used to indicate that a player's time is exhausted is activated, due to an incorrect or defective move counter, an incorrect setting, or a defect ([16O](#)) of any kind, the flag is considered to have fallen prematurely. Since the move counters, on clocks equipped with them, may not be used as the only evidence in claiming that the prescribed number of moves were not completed in the allotted time ([13C](#)), both players' scoresheets may be used as evidence of an incorrect or defective delay clock.

If either [16Ga](#) or [16Gb](#) occurs, the director should deny the claim of a time forfeit ([13C](#)) and the game is continued, with a different clock, if possible. A later time-forfeit claim ([13C](#)) in that control by either player is still allowed.

16H. Apparent flag fall can cause forfeit.

- a. Analog clock: even though it may seem that the flag ([5G](#)) fell early, if the clear white space described in [16Ga](#) is not apparent, the player's time has expired.

TD TIP: For instance, if the right side of the minute hand is touching the left side of the hour marker, even though it may not reach to the center of that marker, the time has been used up. Players should realize that this possibility exists and should refrain from using all their apparent time if not essential.

- b. Delay clock: because each delay clock manufacturer applies the delay and flag fall procedures in slightly different ways, it may then appear that the flag fell early as described in [16Gb](#); however, the player's time has expired.

16I. Starting the clock.

At the time determined for the start of the game, after the board and pieces are set up, the clock of the player with the white pieces is started. During the game, each of the players, having moved, stops the player's clock and starts that of the opponent. **See also** [5H, Pressing the clock](#) and [16N, Beginning the round](#).

16J. Black not present.

If Black is not present for the start of the game, White shall start his own clock, make his move on the board, and start Black's clock.

TD TIP: *If a director observes that White has started Black's clock without moving, the director should remind White to make a move immediately. If, upon arriving, Black observes that White has started Black's clock without moving, Black may immediately start White's clock or stop the clock and make a claim. Either way, if the clock has a move counter, it may be necessary to adjust it before the game commences. The director may assess the standard penalty ([1C2A](#)), or other penalties if appropriate, against the player who improperly started Black's clock without moving.*

If White makes a move before the clock is started, the move counter may be off by a half-move. If White starts Black's clock without moving, the counter may be off by a half-move or a full move. The director should, at an early stage in the game, verify the setting of the move counter, and ask the players to correct it if necessary.

16K. Both players late.

If both players arrive late, the first to arrive must split the elapsed time before starting the opponent's clock. For example, if the first player to arrive is 40 minutes late, the clocks should be set to reflect 20 minutes of elapsed time on each side. **See also** [13F, Late arrival by both players](#); and [13D, Late arrival for game](#).

16K1. Elapsed time not reflected.

If the first late player to arrive fails to do this and instead sets the clocks to reflect no elapsed time on either side, this setting stands unless corrected by a director or changed by agreement between the two players.

16K2. Elapsed time incorrectly reflected.

If the first late player to arrive sets the clocks to give the opponent a disadvantage, such as charging the opponent with all the elapsed time, and this is noticed by or pointed out to the director, the improper times shall be corrected and the player responsible for them penalized at the director's discretion.

16L. Possible stipulations.

The director may require that clocks face a certain direction or that Black or White sit on a particular side of the table. In the absence of such a requirement, unless Black is late arriving for the start of the game ([39A1](#)), Black determines which side of the board the clock is on, and the player arriving at the chessboard first may choose either side of the table to sit on. **See also** [39A1, Black player late](#).

16M. Equipment needed to start clock.

Except for splitting the elapsed time if both players are late or lack equipment, no player may subtract time from a late opponent except by starting a clock. A late opponent's clock may not be started until the board and pieces are in place. If equipment becomes available only after the round has started, the elapsed time from the beginning shall be divided equally between the two players. **See also** [13F, Late arrival by both players](#) and [13D, Late arrival for game](#).

16N. Beginning the round.

With the exception of games rescheduled by the director, all clocks should start promptly at the time specified for the round. If feasible, the director should give a warning and then announce that play must begin. In a tournament where it is impractical for the director to announce that play should start, players should be urged in advance to begin games promptly and informed that no permission is needed to start clocks at the specified time if the pairings are posted. **See also** [5H, Pressing the clock](#); [6A, The first move](#); and [16I, Starting the clock](#).

16O. Defective clocks.

Every indication given by a clock is considered to be conclusive in the absence of evident defects. A player who wishes to claim any such defect must do so as soon as aware of it. A clock with an obvious defect should be replaced, and the time used by each player up to that time should be indicated on the new clock as accurately as possible.

The director should use judgment in determining what times shall be shown on the new clock. A director who decides to subtract time from one or both players shall leave that player(s) with the greater of either five minutes to the time control or at least one minute for each move the player still needs to meet the time control.

16P. Erroneously set clocks.

An erroneously set clock should be handled in the same fashion as a defective clock. As in 16O, the director should use judgment in deciding whether to make time adjustments. The most common situation of this type involves an analog clock set to expire at 7:00 rather than the correct 6:00. This is best handled by pointing out to both players that the time control expires at 7:00. Clocks can also be reset for the correct time controls and the correct elapsed time for each player.

Sometimes this hour difference is not pointed out and there is an eventual time claim. Even though the clock may show 6:00 with a flag down, or the signaling device on a delay or digital clock indicates a flag fall, if the total elapsed time shown for both players is about an hour more than possible, considering when the game started, the player should not be forfeited, and should be given the hour in question.

***TD TIP:** Often digital and delay clocks are a challenge to set properly. The director should use judgment in deciding if a digital or delay clock was set improperly deliberately, or inadvertently. Adding two minutes to the injured player's unused time should penalize deliberate incorrect settings. In either case the error(s) should be corrected. If the players cannot adjust the digital or delay clock properly then an analog clock with the proper settings may be used instead. A few common errors in setting digital and delay clocks: (1) using the "Fischer" instead of the proper "Bronstein" setting, (2) secondary sudden death time controls that are set improperly or not at all, and (3) inaccurate move counters.*

***TD TIP:** Directors are encouraged to intervene in the game to correct an incorrectly set clock without requiring a player to make a claim first. Incorrectly set clocks can cause multiple problems for the entire tournament. This intervention is best done early in the game.*

16P1. Delay or increment not set.

If a delay- or increment-capable clock is used at an event with a delay or increment time control and the delay or increment is not set, this is handled in the same fashion as an erroneously set clock. The delay or increment should be set for the remainder of the game. The director should use his or her best judgement when determining the clock settings.

16Q. Interruption of game.

If the game is to be interrupted for some reason beyond the control of the players, such as a defective clock, disruption of the pieces, re-establishing the position after an illegal move, making the claim of a draw or win or a rules violation, or for any other reason that assistance by the tournament director may be required both clocks should be stopped by one of the players. When doing so, the player must state the reason for stopping the clocks, and see the director if necessary to resolve the situation. [See also 5I, Stopping the clock; 13C6, Claimant's clock; 21F, Player requests for rulings; and 21F1, Timing of requests.](#)

16R. Illegal Moves

[See 11A, Illegal move during last 10 moves; 11D, Illegal move; and 16Q, Interruption of game.](#)

16S. Priority of agreed result over time-forfeit claim.

A resignation or an agreement to draw remains valid even when it is found later that the flag of one side had fallen. **See also** [13B, Resignation](#); [14B, Agreement](#); and [19G1, Agreed draw and invalid move](#).

16T. Both players exceed time control.

If both players exceed the time control, no claim of time forfeit is possible. In a non-sudden death control, the game continues. In a sudden death control, the game is drawn. **See also** [13C6, Claimants clock](#); [13C13, Player out of time cannot claim](#); [14G, Both flags down in sudden death](#); [14G2, Players apparently unaware of situation](#); and [16Y, Assisting players with time management prohibited](#).

***TD TIP:** An increment time control of 30 seconds or more is not considered sudden death, therefore if both players should exceed time control, the clocks should be reset to the “next” time control of the time increment (e.g. 30 seconds) per move.*

16U. Avoiding the need to reset clocks.

It is recommended for analog clocks that secondary and subsequent time controls allow one hour per player so that the minute hand will be at twelve (12:00) and the flag will fall when the player’s time expires. This avoids the need to reset clocks and the problems sometimes caused by resetting. The latter include questions or disputes about player resetting, directors being diverted from other duties to reset, time shortage situations with no flags when players forget to reset, and players whose flags have just fallen resetting the clock before the opponent claims a forfeit win. Check the manufacture’s manual for instructions on properly setting a delay clock to reset automatically after the end of the first time control. **See also** [16B, How to set clocks](#) and [16W, resetting clocks when necessary](#).

16V. One vs. two controls when time is limited.

If there is not enough time for a second control of an hour per player, it is recommended the tournament have only one control unless the organizer believes the players would prefer otherwise. For instance, if games must end in two hours, G/60 should be preferred to 30/30 followed by SD/30 unless players have indicated a preference for the latter.

16W. Resetting clocks when necessary.

When using an analog clock, if a period of less than one hour is used for a second or later control period, when both players complete the number of moves required of the previous time-control period, the players should reset both clocks by moving them forward one hour minus the length of the next time-control period. The director may specify alternate procedures. With a few exceptions, properly set digital clocks usually reset automatically. **See also** [16B, How to set clocks](#) and [16U, Avoiding the need to reset clocks](#).

16X. Extra minute not added.

The old rule permitting an extra minute on each side of a mechanical (analog) clock to compensate for possible inaccuracies is no longer in effect.

16Y. Assisting players with time management prohibited.

No one, except a player’s opponent, may call that player’s attention to the fact that a flag is down, the opponent has moved, or the player has forgotten to press the clock after moving. These prohibitions also apply to the director. For a rare exception regarding calling flags in sudden death, see [14G2, Players apparently unaware of situation](#). **See also** [1C2, Director discretion](#); [11I, Spectators](#); [13CI, Only players may call flag](#); [14J, Draw declared by director](#); [18G2, Director declares game over](#); [20E2, Unsolicited advice](#); [20M5, Spectators cannot make claims](#); [21D, Intervening in games](#); and [21K, Use of director’s power](#).

17. Scheduling

17A. Determination of game times.

All games must be played in the tournament rooms at the times designated by the organizers unless the director specifies otherwise. For example, a player whose game ends late or is adjourned may be granted additional time to

eat or rest (a half hour is common), or a first-round game may be scheduled for play before the start of the tournament. **See also** [23B, Determination of game times](#).

17B. Delayed games.

If the director grants a player a late start, the opponent may not start the player's clock until the time specified by the director.

17B1. Informing opponent of new time.

The director should inform the opponent of a player allowed a delayed start of the revised starting time, either by writing the new time on the pairing sheet or by telling the player involved.

17B2. Opponent not informed of new time.

If the director fails to provide the notice described in [17B1](#), the opponent presumably will start the player's clock at the originally scheduled time. In such cases, the opponent will eventually be required to reset the clocks to reflect the revised starting time and grant the player the time promised by the director.

17C. Changes in round times.

Changes in starting times of rounds should be made only in the event of an emergency. It is especially undesirable to make rounds earlier than previously scheduled, as players may forfeit or lose time as a result.

18. The Adjournment of the Game

18A. Description.

If a game is not finished at the end of the time prescribed for play, the director may indicate that it is time for adjournment or accept the request of either player to adjourn. At that point the player on move, after deciding which move to make, does not play that move on the board but instead writes it in unambiguous notation on the scoresheet, puts the scoresheet and that of the opponent in the sealed move envelope ([18D](#)), seals the envelope, stops both clocks, and then records the remaining time on the outside of the envelope.

Until stopping both clocks the player retains the right to change the sealed move. If the player who is told to adjourn makes a move on the chessboard, for whatever reason, that move becomes the sealed move and cannot be changed. **See also** [9A, Transfer to a vacant square](#).

If either player is recording the game in a scorebook, the director may take possession of the entire score book or allow the sealed move to be written on a separate piece of paper and sealed in the envelope.

18B. Sealing a move early.

In tournaments in which the adjournment time is fixed beforehand, normally after the full period of the first time control, a player who has completed the number of moves required may ask the director for permission to seal early. Such a player absorbs the time remaining before the scheduled adjournment by having his or her remaining time decreased by the amount of time remaining in the session. Such requests are ordinarily granted during the last hour of the session.

18C. When to adjourn.

Unless announcing in advance that all games will adjourn at a specific time, the director has discretion as to when to adjourn any game after the first time control. The wall clock shall control the duration of all playing sessions, but the director should refrain from adjourning a game in which one or both players are in serious time trouble. This situation could arise, for example, if the game was started late and half the elapsed time before the start was not deducted from each clock.

18C1. Adjournment despite time pressure.

If it is necessary for the start of the next round, a game may be adjourned in a secondary time-control period in which one player is short of time but the other has a large amount. The director should be aware that despite the time pressure of one player, the game might not end soon, delaying the start of the next round.

18C2. Allowing breaks.

In tournaments with more than one round per day, it is customary to allow a player whose game has just been adjourned a standard amount of time to eat or rest (a half hour is common) before beginning the next game. On occasion, this may require the next round opponent to start that game after the regularly scheduled starting time. **See also** [17A, Determination of game times](#).

18D. The sealed move envelope.

The following should be indicated on the sealed move envelope: names and colors of the players, position immediately before the sealed move, time used by each player, name or color of the player who sealed the move and number of that move, date and time for resumption, and the signatures of both players, indicating they verify and understand the information written on the envelope.

18E. Custody of sealed move envelope.

The director is responsible for custody of the envelope.

18F. Problems of the next-to-last round.

Substantial effort should be made to complete all unfinished games, especially those involving prize contenders, from previous rounds before the last round begins. This must, however, be balanced by the need to start the final round as close to the scheduled time as possible.

18F1. Considerations.

When deciding whether to adjourn games in such cases, the director must weigh the harm to other contenders that might ensue if one of the players loses the final game and then decides to resign the adjourned game, either because a long delay in resumption seems likely or for unethical reasons. On the other hand, delaying the last round for many hours can cause immense player dissatisfaction; some in contention may even withdraw rather than wait.

18F2. Pairing players unaffected by result.

A director who does not wish to adjourn a long game may seek private assurances from both players that they will not withdraw and will play the last round regardless of the result of the long game. This would allow all players to be paired except those whose pairings would be affected by the result of that game.

18F3. Sudden-death.

Widespread use of sudden-death time controls has minimized the problems associated with last-round pairings. **See also** [28Q, Pairing unfinished games](#) and [29F, Last-round pairings with unfinished games](#).

18G. Adjudications.

Only under emergency circumstances may a director permanently adjudicate a game; that is, declare a result based upon best play by both sides. When used in other than emergency situations, this fact must be clearly specified in all tournament publicity and posted and announced at the site. **See also** [14G2, Players apparently unaware of situation](#); [14J, Draw declared by director](#); [16Y, Assisting players with time management prohibited](#); and [21D, Intervening in games](#).

18G1. Example of emergency.

An *emergency* situation could arise, for example, if a player with substantial time remaining and a poor position disappears for more than 15 minutes or is present but shows little interest in considering the position. Such behavior is unsportsmanlike and the director is encouraged to adjudicate, possibly after a warning. **See also** [1C2, Director discretion](#); [20H, Long absence during play](#); [21F, Player requests for rulings](#); and [21K, Use of director's power](#).

18G2. Director declares game over.

[18G](#) does not prevent a director from declaring the result of a game that has ended without the players noticing this. For example, if the game has been decided by checkmate ([13A](#)), late arrival for game ([13D](#)), late arrival for adjournment resumption ([13E](#)), stalemate ([14A](#)), or insufficient material to continue ([14D](#)), the director may declare the game over. **See also** [1C2, Director discretion](#); [13C1, Only players may call flag](#); [14G2, Players apparently](#)

unaware of situation; 14J, Draw declared by director; 16Y, Assisting players with time management prohibited; 21D, Intervening in games; 21F, Player requests for rulings; and 21K, Use of director's power.

19. Resumption of the Adjourned Game

19A. Setup.

When the game is resumed, the position immediately before the sealed move shall be set up on the chessboard, and the times at adjournment shall be indicated on the clocks.

19B. Opening the envelope.

The envelope (18D) shall be opened only when the player who must reply to the sealed move is present. The director then opens the envelope, makes the sealed move on the chessboard, and starts the player's clock.

19C. Opponent of sealing player absent.

The clock of an absent player who must respond to the sealed move shall be started at the beginning of the adjournment session, but the envelope containing the sealed move shall be opened only when the player arrives.

19D. Sealing player absent.

If the player who has sealed the move is absent, the player responding to the sealed move is not obliged to play a move on the chessboard. Such a player has the right to record the move in reply on the scoresheet, seal it in an envelope, and press the clock (5H). The envelope should then be given to the director and opened on the opponent's arrival.

19E. Sealed move envelope missing.

If the envelope (18D) containing the move recorded in accordance with 18A has disappeared, the game shall be resumed from the position at the time of adjournment with the clock times as they were at the time of adjournment.

If it is impossible to reestablish the position, the game is annulled, and a new game must be played unless the director determines either that it is impractical to do so or another solution offers greater equity. If the time used cannot be reestablished, the director must decide how to reset the clocks. **See also** 1C2, Director Discretion; 14J, Draw declared by director; and 21K, Use of director's power.

19F. Sealed move ambiguous.

A director who feels an ambiguous sealed move has two or more reasonable interpretations may allow the sealer's opponent to choose among the possibilities. The sealer's opponent's clock will run while considering which to choose. **See also** 13H, Sealing of invalid move.

19G. Sealed move invalid.

If the envelope contains no sealed move or the sealed move is illegal and the director finds there is no reasonable interpretation of it, the player who sealed the move loses the game. **See also** 13H, Sealing of invalid move.

19G1. Agreed draw and invalid move.

If the players agree to draw and then find that an invalid move was sealed, the draw stands. **See** 14B, Agreement.

***TD TIP:** In the cases of an agreed draw or resignation, both players should notify the director. The director should be alert to the possibility that players may have reached agreement without notifying the director.*

19G2. Resignation and invalid move.

If a player resigns (see 19J) and then finds that the opponent sealed an invalid move, the resignation stands. **See also** 13B, Resignation.

19G3. Loss on time and invalid move.

If the opponent of the player who sealed loses the game due to failure to appear in time for its resumption and then finds that the sealed move was invalid, the loss on time stands. **See** 13C, Time forfeit.

19H. Game resumed with wrong times on clock.

If, upon resumption, the times have been incorrectly indicated on either clock, the error must be corrected if either player points this out before making a move. If the error is not so established, the game continues without any correction, unless the director determines that another solution offers greater equity.

19I. Game resumed with incorrect position.

If, upon resumption, the position is set up incorrectly, this is considered an illegal move. If discovered within ten moves of resumption, the position must be corrected. The clock times are not adjusted. **See also** [11E, Incorrect adjourned position](#).

19J. Agreed result of adjourned game.

If both players agree on the result of an adjourned game before resumption, both players must notify the director. **See also** [14B, Agreement](#).

***TD TIP:** Sometimes the sealed move is mate or stalemate, so the sealed move ends the game; however, this is considered unsportsmanlike behavior on the part of the player that knowingly sealed such a move. This kind of behavior may be fined or punished.*

20. Conduct of Players and Spectators

20A. Conduct of players.

Players shall participate in the spirit of fair play and good sportsmanship, and must observe the US Chess Code of Ethics. **See also** Chapter 6: [US Chess Code of Ethics](#).

20B. Use of recorded matter prohibited.

During play, players are forbidden to make use of handwritten, printed, or otherwise recorded matter. While the penalty is at the discretion of the director, a forfeit loss is usually ruled if the material is relevant to the game, while a lesser penalty or warning is common otherwise. For example, a player on move five of a King's Indian Defense would usually be forfeited for reading a book on the King's Indian but given a warning or time penalty for reading one on rook endings. **See also** [1C2, Director discretion](#) and [21K, Use of director's power](#).

***TD TIP:** Often players will use headphones to listen to material unrelated to the game. This is not a violation of Rule [20B](#); however, a director may inspect the listening device(s) used to make sure that the material is indeed unrelated to the game.*

20C. Use of notes prohibited.

The use of notes made during the game as an aid to memory is forbidden, aside from the actual recording of the moves, draw offers, and clock times, and the header information normally found on a scoresheet. This is a much less serious offense than [20B](#); a warning or minor time penalty is common, with more severe punishment if the offense is repeated. **See also** [1C2, Director discretion](#); [15, The Recording of Games](#); and [21K, Use of director's power](#).

20D. Use of additional chessboard or computer prohibited.

A player who analyzes a game in progress on another chessboard or consults a computer about the position is guilty of a serious violation of the rules. Though the director still has discretion, the usual penalty is loss of the game. **See also** [1C2, Director discretion](#); [21K, Use of director's power](#); and [36H, Consultation](#).

20E. Soliciting or using advice prohibited.

During play the players are forbidden to make use of any notes, sources of information or advice (solicited or not), or analyze on another chessboard. **See also** [1C2, Director discretion](#); [20N, Electronic communication devices](#); and [21K, Use of director's power](#).

20E1. Solicited advice.

This is a serious violation and a forfeit loss is often ruled. **See also** [1C2, Director discretion](#) and [21K, Use of director's power](#).

TD TIP: *The director has the right to require that cell phones and other communication devices be turned off in the tournament room.*

20E2. Unsolicited advice.

Ruling on unsolicited advice can be difficult. The giver deserves a penalty, but what of the recipient? The director's task is to prevent a player from benefiting from advice but also not unduly penalize the player for another's offense. There is sometimes no good solution to this problem, but here are a few examples of possible rulings.

- a. A Class D player suggests a winning move to a Master. If, as is likely, the director feels the Master would probably find the move without recourse to the advice, no penalty should be imposed.
- b. A Master suggests a winning move to a Class D player. If the director feels the D player would probably not find the move without help, the ruling may be that the D player is prohibited from making the move.
- c. A move is suggested, and the director is not sure if it is a good one. The recipient seems to have other acceptable moves. The ruling might be that the player must play a different move, as this seems least likely to cause injustice.
- d. A winning move is suggested. All other moves seem to lose and the director believes it unclear whether the player would have likely found the move without help. This situation is especially difficult. If the move is allowed, the opponent will feel cheated by the spectator. If it is not permitted, the player will feel cheated, claiming he or she would have found it without help.

Neither ruling is incorrect, but perhaps fairer would be to rule the game a draw (see [14J](#)) or to show the position to several players of similar rating to the one involved, who are unaware of and have no stake in the dispute, to help determine whether a player of that strength is likely to find the move.

- e. A weak move is suggested. No need to penalize the recipient.
- f. A player with five moves to make in ten minutes and an unclear position forgets to press the clock and this is pointed out by a spectator 30 seconds later. The director may only guess whether the player would have noticed the clock before the flag fell, and if so, how much time would have elapsed. A time penalty of a few minutes might be appropriate.
- g. The situation is identical to f above except that nine of the ten minutes have elapsed before the spectator's intervention. The director must consider that having not noticed for nine minutes, the player may well not have pressed the clock in the last minute either. A forfeit is unfair as the player might have noticed in the final minute, but not taking strong action may be even more unfair to the opponent.

Imposing a time penalty on a player already surprised to have only a minute left may be reasonable. It is unclear whether the player would be helped or hurt by the spectator's intervention and a subsequent decision by the director to take away most of the last minute.

- h. The situation is the same as g above except that the player who forgot to press the clock has an easy win and will have no problem making the last five moves in a few seconds if necessary. To give the player even a few seconds would mean defeat for an opponent who had good chances to win on time before the spectator interfered.

Leaving any time for the negligent player would be unfair to the opponent, but ruling a time forfeit would be unfair to the negligent player. The *lesser of evils* solution might be to declare the game a draw in accordance with [14J](#).

- i. In all such situations, if the unsolicited advice comes from a relative, close friend, teammate, or coach, the director may impose a more severe penalty than otherwise and may consider the advice solicited.
- j. In a team or individual/team event, if unsolicited advice is given by a teammate or coach, the director has the option of forfeiting the game for team purposes but allowing it to continue for individual purposes and US Chess rating, possibly with a further penalty.

See also [1C2, Director discretion](#); [11I, Spectators](#); [13CI, Only players may call flag](#); [14G2, Players apparently unaware of situation](#); [16Y, Assisting players with time management prohibited](#); [20M5, Spectators cannot make claims](#); [21D, Intervening in games](#); and [21K, Use of director's power](#).

20F. Analysis in the playing room prohibited.

No analysis is permitted in the playing room during play or during adjourned sessions. **See also** [1C2, Director discretion](#); [21F, Player requests for rulings](#); and [21K, Use of director's power](#).

20F1. Adjournment help outside playing room allowed.

While a game is adjourned, a player may receive help outside the playing room from any source, including other players, books, or computers. A prohibition on such help would be unenforceable and would penalize only those honest enough to observe it.

20G. Annoying behavior prohibited.

It is forbidden to distract or annoy the opponent in any manner whatsoever. A director, upon a complaint by the opponent, has discretion to determine whether any particular behavior is in violation of this rule and to impose penalties. **See also** [1C2, Director discretion](#); [21F, Player requests for rulings](#); and [21K, Use of director's power](#).

20G1. Inadvertent annoying behavior.

Sometimes a player's actions, though annoying to the opponent and possibly others, are clearly unintentional. For instance, a player may occasionally cough. While the director has the right to invoke rule [20G](#), this is quite harsh if the player's actions are involuntary. A partial solution is to assign such a player to a board in another room or far away from other games.

***TD TIP:** What is annoying to one person is perfectly acceptable to another. That is why the director decides what is and is not annoying. Uncommon and obtrusive activity is more likely to also be annoying activity. Often if a director just makes players aware that their activity is annoying, the activity stops; however, if that and a warning do not prevent the annoying activity, then stronger penalties can be imposed at the discretion of the director.*

20H. Long absence during play.

Players with games in progress should not leave the playing room for more than 15 minutes without permission from the director. A first offense usually does not warrant a forfeit unless there is additional evidence suggesting a further rules violation during the absence. **For further information** see [18G1, Example of emergency](#).

20H1. Quitting without resigning.

It is rude and unsportsmanlike to abandon a lost position without resigning. Any player with a bad position who is absent without permission for over 15 minutes risks having the game adjudicated. **See also** [18G1, Example of emergency](#) and [20H, Long absence during play](#).

20I. Discussion of games.

Players should not discuss their games in progress with anyone; this may lead to penalties under [20E, Soliciting or using advice prohibited](#). The director has the option of banning all talking in the tournament room, even if not loud enough to be disturbing. **See also** [1C2, Director discretion](#); [20K, Penalties](#); [21F2, Facts are agreed upon](#); and [21K, Use of director's power](#).

20J. Last round discussion.

Especially in the last round, it is improper for contenders paired against each other to engage in discussions about the game or its outcome before or during the game. **See also** [1C2, Director discretion](#); [20K, Penalties](#); [21F, Player requests for rulings](#); and [21K, Use of director's power](#).

20K. Penalties.

Infractions of these rules may incur penalties, including time penalties, loss of the game, expulsion from the tournament, or other penalties or combinations of penalties. **See also** [1C2, Director discretion](#); [13I, Refusal to obey rules](#); [21F, Player requests for rulings](#); and [21K, Use of director's power](#).

20L. Manipulating results.

Collusion to fix or throw games, whether before or during the game, in order to manipulate prize money, title norms, ratings, or for any other purpose is illegal and may result in severe sanctions, including revocation of US Chess membership. Such agreements include arrangements to split prize money no matter what the result of the game. **See also** [US Chess Code of Ethics](#).

20M. Behavior of spectators.

20M1. Spectators have no special privileges.

Spectators not playing in the tournament have no special privileges. For instance, if a player complains that a particular spectator's presence near his or her game is disturbing, rather than investigate the complaint to determine its validity, it may be correct for the director to simply require the spectator to move away from that game. If more complaints are received about the same person, the director may ask that spectator to leave the premises. If the spectator has paid an admission fee, it may be appropriate to refund this fee.

If a player repeatedly complains about various spectators for no apparent reason, the director may choose to disregard such complaints, informing the player that spectators are allowed at the tournament.

20M2. Spectator is player with game in progress.

If the offending spectator is a player in the tournament, especially one with a game in progress close to the complaining player, the situation is less clear. More consideration should now be given to the merits of the complaint, as it is reasonable for an entrant to expect to be able to watch nearby games while playing his or her own game, and this may be impossible without provoking the complaint. But if in doubt, the director should still consider the rights of players to be preeminent over those of spectators.

20M3. Ongoing problems.

Occasionally there may be an ongoing situation in which a player complains that another player's presence is disturbing, or each complains that the other is disturbing. One way to deal with this problem in future rounds is to assign the players to special boards far away from each other or in different rooms. **See also** [1C2, Director discretion](#); [21F, Player requests for rulings](#); and [21K, Use of director's power](#).

20M4. Prohibitions.

It is highly improper, and warrants ejection from the premises, for any spectator to discuss a player's position or time management with that player, to point out that it is the player's move, or to talk in a loud enough voice to be heard by a player with a game in progress. **See also** [1C2, Director discretion](#); [21F, Player requests for rulings](#); and [21K, Use of director's power](#).

20M5. Spectators cannot make claims.

Spectators, including parents and coaches, may point out irregularities to the director in a manner neither heard nor noticed by the players, but have no right to make claims of any kind on behalf of players. If a problem arises during play, a player of any age should understand that he or she should promptly stop both clocks and see a director. A spectator who makes a claim may be ejected. **See also** [1C2, Director discretion](#); [11I, Spectators](#); [13C1, Only players may call flag](#); [14G2, Players apparently unaware of situation](#); [16Y, Assisting players with time management prohibited](#); [20E2, Unsolicited advice](#); and [21K, Use of director's power](#).

20M6. Spectator visibility.

To minimize claims of illegal assistance, if a relative, close friend, or coach of a player is permitted to stand near that player during play, that spectator should stand behind that player rather than in front, so the spectator is not visible to the player. **See also** [1C2, Director discretion](#); [21F, Player requests for rulings](#); and [21K, Use of director's power](#).

20N. Electronic communication devices.

Players are not allowed to leave the playing venue without permission from the arbiter. The playing venue is defined as the playing area, rest rooms, refreshment and smoking area, adjacent hallways and other places as designated by the arbiter/TD.

Without the permission of the arbiter/TD a player is forbidden to have a mobile phone or other electronic means of communication in the playing venue, unless they are completely switched off.

TD TIP: “Permission of the director” allows for maximum flexibility. No specific penalty is prescribed. In the absence of announced rules for a specific event, the standard penalties apply (see [20N1](#)). Organizers are free to announce whatever penalty is appropriate for their event. This rule addresses possession of a communications device. In practice, the device ringing or making some other sound may be the only practical way to detect a cell phone—but this rule is not aimed at penalizing the noise; it is aimed at penalizing the possession of a communications device.

20N1. Disturbing noise or disruption of games.

Audible disruptive noises such as a cell phone ring tone, pager beep, alarms and other noises cause a disruption in the playing hall. These noises are often very loud and disturb the entire room. The following are guidelines for penalizing such disturbances:

- a. First offense standard penalty is to subtract 10 minutes or half the remaining time from a player’s clock, whichever is less. *Variant: Depending on the importance of the event the standard penalty may be up to immediate loss of the game in progress. If a variant is used, it must be announced at the opening remarks for the event and posted prominently in the playing hall and at all entrances.*
- b. Second (and subsequent) offense for the same player during the same event is loss of the game currently in progress.
- c. If the incident occurs in the playing hall, but after the offender’s game for the round is completed while other games are still in progress, then the above penalties apply to the subsequent round. In the case of a loss (e.g. second offense), that player is not paired for the next round.
- d. If the incident occurs after the game for the last round is complete while other games are still in progress, the offender is treated like a non-participating spectator and is ejected from the playing hall. *Variant: Depending on the importance of the event and the disturbance created, the player may receive a ½ point total score penalty for prize distribution.*

21. The Tournament Director

21A. The chief tournament director.

Responsible for all play, the tournament director must see that the rules are observed. The director is bound by the official rules of chess, by US Chess tournament rules and code of ethics, and by all US Chess procedures and policies.

21B. Duties and powers.

The chief tournament director’s duties and powers normally include the following: to appoint assistants as required to help in the performance of his or her duties; to accept and list entries; to provide suitable conditions of play; to familiarize players with the playing facility and other tournament conditions; to prepare pairings; to display wall charts; to rule on disputes and enforce such rulings; and to collect scores, report results, and forward US Chess and membership applications, tournament results and fees to the sponsoring organization and for the official record. See also [1C2, Director discretion](#); [21F, Player requests for rulings](#); and [21K, Use of director’s power](#).

21C. Delegation of duties.

The chief director may delegate any duties to assistants, but is not thereby relieved of responsibility for performance of these duties.

21D. Intervening in games.

The director's intervention in a chess game shall generally be limited to the following:

21D1. Answering rules questions.

Answering rules and procedural questions.

21D2. Correcting illegal moves observed.

Correcting any illegal moves observed, unless time pressure exists (11D1) or Variation 11H1 is used (the director does not correct illegal moves unless asked by a player).

21D3. Warning players.

Warning players about or penalizing players for disruptive, unethical, or unsportsmanlike behavior. **See also** [1C2, Director discretion](#); [13I, Refusal to obey rules](#); [21F, Player requests for rulings](#); and [21K, Use of director's power](#).

21D4. Settling disputes.

Settling disputes, including those regarding time forfeits and claims of draws.

21D5. Informing players.

Informing players about opponents' late arrivals or about opponents' leaving the room for an extended period.

21D6. Fees.

Collecting fees.

See also [1C2, Director discretion](#); [11I, Spectators](#); [11J, Deliberate illegal moves](#); [13C1, Only players may call flag](#); [14G2, Players apparently unaware of situation](#); [14J, Draw declared by director](#); [16Y, Assisting players with time management prohibited](#); [18G, Adjudications](#); [18G1, Example of emergency](#); [18G2, Director declares game over](#); [20E2, Unsolicited advice](#); [20M5, Spectators cannot make claims](#); [21F, Player requests for rulings](#); and [21K, Use of director's power](#).

21E. The playing director.

A tournament director must not only be absolutely objective, but must also be able to devote full attention to directing duties; for this reason, a director, on principle, should not direct and play in the same tournament. In US Chess National Events, the director cannot be a playing director.

However, in club events and others that do not involve substantial prizes, it is common practice for the director to play. A director may also serve as a house player ([28M1](#)). Those who choose this double role should be especially careful to maintain objectivity. If possible, a playing director should appoint another director to make rulings involving his or her own games.

A playing director who must devote time to a dispute in another game may stop his or her own clock during this period. While the clock is stopped, the director should not look at the position of his or her own game, but the director's opponent is permitted to do so.

21F. Player requests for rulings.

A player has the right to stop both clocks to ask the director to rule upon a point of law, procedure, or conduct. The director must first establish the facts without disturbing other games. Extended discussions between director and player(s) is inappropriate in the tournament room; a hallway or headquarters room is more desirable. **See also** [5I, Stopping the clock](#); [13C6, Claimant's clock](#); and [16Q, Interruption of game](#).

21F1. Timing of requests.

A player with a valid claim or complaint of any type should immediately stop both clocks ([5I](#)) and see a director. In most cases, the player who defers such a claim waives the right to make the claim. However, a delayed claim may still be in order if it is based on evidence not previously available, such as the testimony of a witness, or if the situation causing the claim remains in existence. **See also** [13C6, Claimant's clock](#) and [16Q, Interruption of game](#).

21F2. Facts are agreed upon.

If the facts are agreed upon, the director should rule as follows:

- a. If no penalty is prescribed by the rules and there is no occasion to exercise the director's discretionary power to penalize, the players should be directed to proceed with play.
- b. If a case is clearly covered by a rule that specifies a penalty, the director should enforce that penalty. **See also** [1C2, Director discretion](#); [13I, Refusal to obey rules](#); and [21K, Use of director's power](#).
- c. If an infraction has occurred for which no penalty is prescribed, the director's discretionary power to penalize may be exercised. **See also** [1C2, Director discretion](#); [1C2a, Standard penalty](#); [13I, Refusal to obey rules](#); and [21K, Use of director's power](#).

21F3. Facts are not agreed upon.

If the facts are not agreed upon, the director should proceed as follows:

- a. A director who is satisfied that the facts have been ascertained should rule accordingly.
- b. A director who is unable to satisfactorily determine the facts must make a ruling that will permit play to continue.

See also [1C2, Director discretion](#); [11I, Spectators](#); [11J, Deliberate illegal moves](#); [13C1, Only players may call flag](#); [13I, Refusal to obey rules](#); [14G2, Players apparently unaware of situation](#); [14J, Draw declared by director](#); [16Y, Assisting players with time management prohibited](#); [18G2, Director declares game over](#); [20, Conduct of players and spectators](#); [20E2, Unsolicited advice](#); [20M5, Spectators cannot make claims](#); [21D, Intervening in games](#); [21F2, Facts are agreed upon](#); and [21K, Use of director's power](#)

21G. Evidence.

Unbiased evidence is required to support any claim by a player that the opponent violated a rule.

21H. Appeals.

A director who believes that an appeal of a ruling on a point of fact or the exercise of a discretionary power to penalize might be in order should advise the player of the right to appeal.

21H1. How to appeal.

A player may appeal any ruling made by the chief director or an assistant director, provided that the appeal is made within one-half hour and before the player resumes play, unless additional time is granted by the director. The director may require that the appeal be made in writing. The appeals committee may penalize frivolous appeals. **See also** [21I7, Groundless appeals](#).

21H2. Director may reserve decision.

The director may reserve a decision temporarily and direct that play continues before the appeal is heard. In this case, the appellant must continue play *under protest*, that is, without prejudice to the appeal, regardless of the outcome of further play. If the appellant wins that game, the appeal will be considered moot.

21H3. Response of chief director.

A chief tournament director who believes that the appeal is justified may reverse or modify any decision made by the chief tournament director or another director. A chief director, who believes that the appeal has some merit, but not enough to be upheld, should advise the appellant of the right to pursue the appeal further.

21H4. Appointment of committee or referee.

If a player notifies the director of intent to pursue the appeal further, the director shall appoint a committee (21I) or a special referee (21J) to hear the appeal, unless the orderly progress of the tournament would be disturbed by such action. If the director determines that either appointment would be disruptive, the player may reserve the right to share in the prize fund by requesting to be paired for future rounds as if the appeal were upheld. The player has the same right in the case of intending to appeal a local decision to US Chess.

21I. Appeals committee.

21I1. Composition.

An appeals committee should consist of at least three persons, preferably US Chess-certified tournament directors. A committee of two is sufficient if both are certified at the senior director level or higher. Every attempt should be made to appoint individuals to the appeals committee who have tournament director's certification level equal to or higher than that of the chief tournament director of the tournament. To ensure impartiality a special referee (21J) is preferred over an appeals committee.

21I2. Procedure.

When a committee hears an appeal, all persons except committee members, the director, and both players shall be excluded from the hearing. Witnesses may be called, but only to answer questions from the parties concerned, after which they will be dismissed. The director shall furnish the committee with the current edition of the *Official Rules of Chess* and shall call attention to the rules applicable to the dispute.

21I3. Witnesses.

The committee shall elicit the testimony of witnesses as it sees fit. In hearing the appeal, the committee must give preeminent weight to the director's testimony as to anything said or done in his or her presence.

21I4. Consultation.

The committee may consult a special referee (21J) by phone for advice, or may vote to refer the dispute to a special referee.

21I5. Function of committee (standard of review).

The function of an appeals committee is not to substitute its judgment for that of the director, but rather to overrule the director only if it is clear the latter's ruling is incorrect. The committee should not overrule a proper decision simply because it prefers an alternate proper decision.

21I6. Decision.

After hearing the testimony, the committee members shall deliberate among themselves to reach a decision, which shall be put in writing, signed by all the members (even if one or more members voted against the decision), and given to the chief director. In the event of a tie vote, the director's decision shall stand.

21I7. Groundless appeals.

If the committee finds that the appeal is clearly groundless, it may penalize the player for that reason, or leave the penalty to the director's discretion. In ruling on an appeal, the committee may exercise all powers accorded to the chief director by the rules and other US Chess procedures.

21J. The Special Referee.

A special referee is a director with substantial experience who is available to provide advice or make a ruling by telephone. Phone numbers of special referees can be found currently on the US Chess web page using the TD/Affiliate page and are also occasionally printed in *Chess Life*. To ensure impartiality a special referee is preferred over an appeals committee (21I).

21J1. Usage.

The director may refer any appeal to a special referee, but should keep in mind that unless the facts are agreed upon, or the players' differences easily summarized, substantial delay and phone cost may result. Use of a special referee is most appropriate when the tournament director is certified at a lower level than the referee, and when a director of comparable certification to the referee is not immediately available to serve on an appeals committee.

21J2. Selection.

When selecting the referee to call, and the alternates to call if the original selection cannot be promptly reached, the director should be sensitive to any reasonable objection by either player against the use of a particular referee.

21J3. The phone call.

When placing any call to the referee, the director should invite both players to be present. The director should not inform the referee of the players' names, but refer to them as *White* and *Black*.

21J4. Player contact with referee.

Neither player has an automatic right to speak to the referee. A director who finds such discussion unnecessary may choose not to allow it. It is desirable that both players know in advance what the director will say and agree that it will correctly reflect their viewpoints.

21J5. Validity of referee's decision.

The decision of a special referee carries weight equal to that of an appeals committee. No decision of a special referee may be appealed to an appeals committee, nor may any decision of an appeals committee be appealed to a special referee. However, a special referee who believes the dispute can best be settled on-site may refer it to an appeals committee, which then should be appointed.

21K. Use of director's power.**21K1. Conciliation.**

The director should make every effort to resolve a dispute by informal, conciliatory means before resorting to the exercise of the director's formal discretionary power to penalize. **See also** [1C2, Director discretion](#) and [13I, Refusal to obey rules](#).

21K2. Beware abuse of power.

Tournament directors should realize that the powers given to them under these rules should be used sparingly, to restore equity or to penalize a serious infraction so as to discourage its recurrence. No one's interests are served by what appears to be the arbitrary or high-handed exercise of authority. **See also** [1C2, Director discretion](#) and [13I, Refusal to obey rules](#).

21L. Appeal to US Chess.

Any decision of an appeals committee or special referee, or of the director when an appeals committee or special referee is not appointed, may be appealed to US Chess. **See also** [24B, Appeals to US Chess](#).

21L1. Procedure.

Appeals in writing must be postmarked within seven days of the end of the tournament to the US Chess office. Appeals submitted after the seven-day deadline may be considered at the discretion of the committee hearing the appeal. Appeals may be submitted via e-mail, but the business office or the committee(s) hearing the appeal may require a signed statement. The office will refer an appeal to the appropriate committee(s) but may immediately reject obviously groundless appeals. Most appeals will be referred to the Rules Committee, but some appeals may be more appropriate for the Tournament Director Certification Committee or the Ethics Committee. A good-faith deposit must be included with the appeal. The executive director shall from time to time review and set the required deposit amount in consultation with those committees that handle appeals. The deposit will be returned unless the ruling authority finds the appeal to be groundless and rules that the deposit is to be forfeited. US Chess reserves the right to make final decisions concerning the rules and procedures that govern its competitions. **See also** [24A, Rules Committee](#); and [24B, Appeals to US Chess](#).

TD TIP: *In rare cases a committee(s) ruling is appealed to the US Chess Executive Board. Even more rare would be an appeal of any US Chess Executive Board decision directly to the US Chess Delegates at the annual delegates convention. In order for an appeal to be considered by the delegates many exact rules and regulations must be followed. Contacting an experienced delegate would be advisable if an appeal to the delegates at the convention is to be pursued.*

22. Unplayed Games

22A. Games forfeited due to nonappearance.

A player who does not appear for the game, or appears too late, is given zero points and the opponent is given one point. On pairing sheets (28J) and wall charts (28O), the forfeit is circled or indicated by an *F*. Computer wall charts may use the symbol *X* for the winner and *F* for the loser of an unplayed game. **See also** 13D, [Late arrival for game](#); 13F, [Late arrival by both players](#); and 28P, [Unplayed games](#).

22B. Full-point byes.

If there is an odd number of players for a round, and a suitable house player (28M1) not in the event cannot be found to fill in, one player will receive a full-point (1) bye. **See also** 27A3, [Upper half vs. lower half](#); 28A, [Pairing cards or program](#); 28J, [The first round](#); 28K, [Late entrants](#); 28L, [Full-point byes](#); 28L4, [Full-point byes after half-point byes](#); 28L5, [New players in four-round event](#); 28M, [Alternative to byes](#); 28S, [Reentries](#); and 29C1, [Upper half vs. lower half](#).

22C. Half-point byes.

For the convenience of players, the director may allow half-point (0.5 or ½) byes for missed rounds. **See also** 27A3, [Upper half vs. lower half](#); 28A, [Pairing cards or program](#); 28J, [The first round](#); 28K, [Late entrants](#); 28L, [Full-point byes](#); 28L4, [Full-point byes after half-point byes](#); 28L5, [New players in four-round event](#); 28L, [Full point byes](#); 28M, [Alternative to byes](#); 28S, [Reentries](#); and 29C1, [Upper half vs. lower half](#).

TD TIP: *It is useful to have a bye signup sheet available until the announced cut off time for requesting byes ends. Directors are urged to check this list before making any pairings.*

22C1. Availability.

Half-point byes may be offered during the first half of a tournament or the middle round of a tournament with an odd number of rounds, with or without advance notice. If pre-tournament publicity does not address this subject, players may contact the organizer to inquire about availability.

If half-point byes are allowed for any rounds during the second half of a tournament, they should be mentioned in pre-tournament publicity. An exception may be made in the event of emergency.

22C2. Deadline for bye requests.

All requests for half-point byes should be made at least an hour before the bye round unless the director requires otherwise.

22C3. Byes and class prizes.

It is recommended that if class prizes are likely to be won with even or minus scores, half-point byes should be unavailable or limited to one per player in such classes.

22C4. Irrevocable byes.

If half-point byes are allowed for the final round, players must give irrevocable notice of such byes before beginning their first game, or if the organizer so announces, their second game. The deadline for claiming such byes should appear in pre-tournament publicity. It is recommended that other byes in the second half of the tournament be treated similarly and that notice of all scheduled irrevocable byes be posted on or near the wall charts (28O).

TD TIP: *It is useful for directors to note on bye signup sheets the latest time players can request last round byes. Directors concerned about awarding unearned prize money need to be very careful in allowing players to sign up for half-point byes in the last half of the tournament, especially the last round; therefore, it is common that those bye requests be made well in advance of the start of the second half of the event, especially for the last round.*

22C5. Cancellation of irrevocable byes.

If the director agrees, a player may cancel an irrevocable half-point bye under the condition that if the player wins, the result will be treated as a draw for prize purposes.

22C6. Full-point byes after half-point byes.

A full-point bye should not be assigned to a player who has previously taken or committed to a half-point bye unless all others in the score group have already had a bye or a no-show forfeit win. **See also** [28L, Full-point byes](#).

***TD TIP:** If a director is using a pairings program then it is wise to check the pairings after they have been made to insure that Rule 22C6 has been applied properly, especially in the case where a player has requested a bye in a future round.*

23. Organization and Membership**23A. Responsibilities of organizer.**

Tournaments rated by US Chess must be organized by a US Chess affiliate or by US Chess itself. This organizer is responsible for all financial matters related to the tournament and may select an individual or a committee to handle the physical and financial arrangements. These include finding a playing site, setting a date and the times of the rounds, determining the entry fees and prizes, hiring tournament directors, and advertising the event.

The organizing affiliate must select a chief tournament director (also referred to as *director*, *TD*, or *arbiter*) whose US Chess certification level is appropriate for the type of tournament anticipated. The tournament director is responsible for all decisions in the tournament regarding rules.

23A1. Obligation to pay guaranteed prizes.

An affiliate that guarantees prize money but fails to pay it in full may have its US Chess affiliation revoked, and the individual(s) responsible for that affiliate may be denied the right to affiliate under a different name. **See also** [32, Prizes](#).

If extraordinary circumstances such as extreme weather conditions or civil unrest prevent most potential entrants from playing in a tournament, the organizer may appeal to the US Chess executive director for permission to limit the prizes to 100 percent of entry fees collected.

23A2. Tournament cancellations.

Tournaments announced in *Chess Life* may be canceled only if one of the following conditions exists:

- a. A timely cancellation notice appears in an appropriate issue of *Chess Life*.
- b. Physical conditions, such as closure of site or extremely inclement weather, render the site unusable.

A disappointing number of advance entries is never a valid reason for cancellation. Organizers who cancel a tournament in a non-emergency situation without proper notice will be prohibited from announcing tournaments in *Tournament Life* or elsewhere in *Chess Life* for three years. (Additional penalties are also possible.)

23A3. Advance entry refunds.

Unless otherwise stated in all advance publicity, advance entry fees are refundable to players who give notice of withdrawal before the close of registration for round one.

23A4. No refunds once event starts.

A player who begins play in the first round is not entitled to a refund of the entry fee or any portion of it, even if forced to miss most games due to a medical or other emergency. Variations of this policy are at the discretion of the organizer.

23B. Determination of game times.

The organizer determines game times unless the director makes or accepts other arrangements. **See also** [Rule 17, Scheduling](#).

23C. US Chess membership requirement.

For the inclusive dates of the tournament, each player must be a member in good standing of US Chess, unless US Chess regulations waive this requirement.

TD TIP: This is a tricky task. Often players at registration say they have joined US Chess via various methods that do not produce a receipt such as paying recently by check or credit card (on the phone or web). Sometimes they have a receipt from an organizer or another TD that is unfamiliar to the person processing the registration. Some directors decide on a case-by-case basis whether or not they are convinced of the validity of the renewal.

TD TIP: Some directors strictly enforce Rule [23C](#) by making all players pay a US Chess membership fee if the player's membership cannot be verified with a membership card, in a hard copy or disk rating supplement, or online at the US Chess website. This last approach may upset some players who have recently renewed but cannot verify the renewal; however, the funds collected at registration for those US Chess memberships extend those memberships for an extra year.

TD TIP: Another approach would be for the director to collect a membership fee from players whose memberships are not verifiable and hold onto those funds in escrow until US Chess rates the tournament. If at that point the director is notified by US Chess that those players are not members, then the director can pass along the membership fees being held in escrow directly on to US Chess. A copy of the US Chess non-member notice can be passed along to the players with their membership receipts. All other escrow US Chess membership fees should then be returned to the players that US Chess did not identify to the director as non-members.

24. Interpretation of the Rules

24A. Rules Committee.

US Chess maintains a standing Rules Committee to review questions pertaining to the rules of play. In case of doubt as to the application or interpretation of these rules, the US Chess Rules Committee will examine the case in point and render an official decision.

24B. Appeals to US Chess.

All proper appeals made to the US Chess National Office shall be referred to the appropriate committee(s), which in most cases is the Rules Committee. Occasionally appeals are more appropriate for other committees. A copy of any appeal considered by the committee shall first be furnished to the chief tournament director plus any other appropriate director(s) of the tournament involved, who should respond with a written statement of his or her own position and any other pertinent documentation. Failure to respond may result in disciplinary action. A copy of the decision(s) of the committee(s) shall be sent to all interested parties. **See also** [21L, Appeal to US Chess](#); [21L1, Procedure](#); and Certification Restrictions ([48, Restrictions](#); [49, Due Process](#); [50, Penalties](#); [51, Appeals](#); and [54, Professional Misconduct](#)).

Chapter 2: Official Rules of Chess

Tournament Section

25. Introduction

A player entering a competition has a right and an obligation to know the rules and conditions. What follows, therefore, is an exposition of U.S. tournament procedures as they are now practiced. The most significant features of a tournament should be noted in the advance publicity and posted prominently at the tournament site. These include round times, speed of play, major pairing variations, prizes, and tiebreak procedures. Players should understand, however, that last-minute circumstances can sometimes force revisions of earlier plans, though conscientious organizers and directors do all they can to avoid changes in announced conditions for competition.

The most common types of US Chess-rated tournaments are the Swiss system and the round robin. Rules for their conduct are discussed below.

26. Variations and Exceptions

26A. Notification.

Any variations from these published standards, including variations discussed in this rulebook, should be posted and/or announced at the tournament prior to their use, preferably before the first round.

26B. Major variations.

A variation sufficiently major that it might reasonably be expected to deter some players from entering should be mentioned in any *Chess Life* announcement and all other detailed pre-tournament publicity and posted and/or announced at the tournament.

27. The Swiss System tournament

The Swiss system can accommodate a large number of players in a relatively short time and has therefore become widespread. Although not as accurate as the completed round robin in determining a winner, the ratings-controlled Swiss is more precise than earlier versions. Since its methods are complex, novice directors should learn them by working with an experienced director.

A Swiss tournament should ideally have a number of rounds adequate to reduce the number of players with perfect scores to one. This result can be guaranteed by limiting entries to a number no greater than two raised to the power of the number of rounds ($2^{\text{number of rounds}} = \text{ideal number of players that produce a single winner}$). For example, a three-round Swiss will produce no more than one perfect score for up to eight players ($2^3=2\times2\times2=8$), a four-round Swiss can handle up to sixteen players ($2^4=2\times2\times2\times2=16$), a five-round up to thirty-two players ($2^5=2\times2\times2\times2\times2=32$). **See also 28R, Accelerated pairings in the first two rounds.**

In practice, however, these numbers are only guides due to the unpredictable number of draws. A properly paired Swiss system usually produces no more than one perfect score from at least double the theoretical number of players. It cannot, however, guarantee a clear winner, nor can it assure that competitors for the same awards will face opposition of similar strength.

It is both a weakness and strength of the Swiss system that slow starters will tend to have faced weaker fields than players who do well in the early rounds but finish with the same end result. While this situation has an element of inequity, it tends to keep more players in the running for a longer time, making Swiss tournaments competitive and exciting.

27A. Basic Swiss system rules.

The following rules are listed in order of priority from 27A1 for the highest priority to 27A5 for the lowest. If it is not possible to adhere to all rules in making pairings, the director should generally follow the rule with the higher priority. However, there are cases in which 27A4, [Equalizing colors](#), or 27A5, [Alternating colors](#), have priority over 27A3, [Upper half vs. lower half](#), (see 29E5, [Colors vs. ratings](#)) and even a variation in which 27A4, [Equalizing colors](#), can have priority over 27A2, [Equal scores](#) (see 29E5f, [Colors in a series](#); 29E5f1, [Last round exception](#); and 29E5h, [Priority of equalization over ratings](#)).

27A1. Avoid players meeting twice (highest priority).

A player may not play the same opponent more than once in a tournament. Even this most basic of all pairing rules must be violated when the number of rounds is greater than or equal to the number of players. If it is necessary for players to play each other twice, then top priority should subsequently be given to having them face each other no more than twice. If two players were paired against each other earlier in the tournament, but the game was forfeited due to the nonappearance of one, they may be paired against each other again.

27A2. Equal scores.

Players with equal scores are paired whenever possible. Note that if accelerated pairings (28R) are used, pairings for round two disregard this rule. For exceptions to the priority of this rule see 29E5f, [Colors in a series](#); 29E5f1, [Last round exception](#); 29E5h, [Priority of equalization over ratings](#); and 28S1, [Reentry playing opponent twice](#).

27A3. Upper half vs. lower half.

Within a score group, i.e., all players who have the same score, the upper half by ranking (28A) is paired against the lower half. **See also** 28J, [The first round](#); 29C1, [Upper half vs. lower half](#); and 29E2, [First-round colors](#). For exceptions to the priority of this rule see 29E5, [Colors vs. ratings](#).

27A4. Equalizing colors.

Players receive each color the same number of times, whenever practical, and are not assigned the same color more than twice in a row. In odd-numbered rounds, the objective is to limit the excess of one color over the other to one. **See also** 29E, [Color allocation](#); 29G, [First round colors](#); 29E3, [Due colors in succeeding rounds](#); 29E4, [Equalization, alternation, and priority of color](#). For exceptions to the priority of this rule see 29E5, [Colors vs. ratings](#); 29E5f, [Colors in a series](#); 29E5f1, [Last round exception](#); and 29E5h, [Priority of equalization over ratings](#).

27A5. Alternating colors.

Players receive alternating colors whenever practical. **See also** 29E, [Color allocation](#); 29E3, [Due colors in succeeding rounds](#); 29E4, [Equalization, alternation, and priority of color](#). For exceptions to the priority of this rule see 29E5, [Colors vs. ratings](#); 29E5f, [Colors in a series](#); 29E5f1, [Last round exception](#); and 29E5h, [Priority of equalization over ratings](#).

28. Swiss System Pairings, Procedures

28A. Pairing cards or program.

Before the first round, the tournament director prepares a pairing card (Figure 2) for each player, or uses a computer program to enter each player. The player's name, rating, and US Chess ID number are written on the card or entered into the program. For scholastic tournaments, the school or team is also included. Directors who want states or cities on their wall charts add this information as well. **See also** 28C, [Ratings of players](#).

***TD TIP:** To verify a player's ID number and rating you can check the US Chess rating list (imported to the hard drive) and the Internet at www.uschess.org. To save a lot of time at registration, check the manuals for the pairings programs to see if they can directly import player information from the data downloaded to a hard drive from the US Chess rating list or the US Chess web site. Contact US Chess for more information.*

***TD TIP:** At scholastic events, pairing by hand or with a pairing program, it is useful to give each school team and each of the team members the same school code. This will prove helpful in both preventing team members from being accidentally paired against each other (28N2) and producing team reports. Team codes can be recorded on the pairing cards or in a manner indicated by the pairing software.*

If cards are used, they are placed in order of rank, from the highest rated to the lowest. Unrated players and players with the same rating are ranked in random order, with the unrated players being placed at the bottom of the group. The director then numbers the cards, giving the highest-rated player number 1, the second highest number 2, and so on until all the cards are numbered. That number is the player's *pairing number*, which will be used throughout the tournament.

Some directors prefer to assign an arbitrary rating of 1200 or 1300, for pairing purposes only, to all unrated players. Such assignments usually place them at or near the bottom, causing pairings similar to those that would result if they were paired as unrated. One major difference is that in a score group with an odd number of players the lowest rated player drops, but not an unrated player. An unrated player who is scoring well in the tournament would often be the highest-rated player in the score group if all games played up to that point had already been rated.

TD TIP: When assigning a rating to any player (including unrateds) for pairing purposes, directors should make sure they use the pairing numbers, and not the ratings of players, when prioritizing the basic Swiss System rules. Most pairings programs have a separate entry field to perform this task. Consult your pairings program manual to find out more information on how to handle director-assigned player ratings.

The pairing cards are used to prepare the wall chart (280) and to pair each round. Computer programs also do both, as well as the sorting and numbering described above, all automatically.

| PAIRING NO. _____ | | | | RATING _____ | | | |
|-------------------|-------|---|--------------|--------------|-------|-----------|---|

Figure 2

28B. Numbering late entrants.

Players who enter after pairing numbers have been assigned are issued the next available unassigned pairing numbers. These numbers should be accompanied by a symbol such as an asterisk to serve as a reminder that rating and not pairing number should be considered when ordering them in their score groups.

Some directors assign an intermediary pairing number such as 12A for a player rated below player 12 but above player 13. Directors need to take care to ensure that this will not cause problems or confusion with the wall chart. The intermediary numbers may not be used in the ratings report sent to US Chess; therefore, directors must renumber each of the players assigned an intermediary pairing number on the wall chart, remembering to also cross reference this new pairing number with all their opponents' pairings information (see illustration). **See also** [28K, Late entrants](#).

A director using a computer program is able to automatically insert the late entrants in their proper places with other player numbers being appropriately and automatically revised.

Other useful information such as address, fees paid, membership expiration date, etc., may also be recorded on the pairing card or in data fields in pairing programs. US Chess sells standardized pairing cards as well as pairing programs for Swiss system tournaments.

28C. Ratings of players.

The rating entered on a player's card is the last-published US Chess rating in the rating list specified in the *Tournament Life* section of *Chess Life*, unless use of a different rating list was specified in the advance publicity for the tournament, or the director has assigned a player a rating. Note that an assigned rating ([28E](#)) used for a tournament may or may not be used for future tournaments. **See also** the first *TD TIP* for [28A](#).

TD TIP: *Players sometimes show the director a US Chess crosstable, or their rating from the US Chess web page. It is common practice to allow players to use those ratings if those ratings are higher than their last published rating ([28E1](#)).*

28C1. Multiple US Chess ratings.

If a player is mistakenly assigned more than one US Chess rating, the director should try to combine these ratings. Two examples:

- a. If the ratings are 1900/5 (1900 based on 5 games) and 1700/4 (1700 based on 4 games), the rating used should be 1811, calculated as follows: $1900 \times 5 = 9500$, $1700 \times 4 = 6800$, $9500 + 6800 = 16300$, $16300 / 9 = 1811$.
- b. If a player with an old established rating of 1900 is erroneously started over as 1700/5 (1700 based on 5 games), the rating used should be that of a 1900 player who draws 5 games vs. 1700 player, or 1860. See the chapter on [The US Chess Rating System](#).

28C2. Foreign or FIDE ratings.

A foreign or formerly foreign player with a foreign or FIDE rating or category is required to disclose such a rating or category when entering a tournament, if any of the following circumstances exist:

- a. The player lacks an established US Chess rating.
- b. The player's US Chess rating has not been published during the past two years.
- c. The director requests this information.

If a player fails to disclose such a rating as required and plays in the tournament, the director may withhold any rating-based prize or unrated prize the player may win. Directors have the right not to accept entries from players who fail to disclose rating information.

TD TIP: *Often a director can find a player's FIDE rating by checking a recent or old Informant or the official FIDE web site.*

28D. Players without US Chess ratings.

Players without official US Chess ratings are eligible only for place (or top non-class) prizes and prizes for unrated players unless alternate procedures are used to assign ratings (28E), such as the following recommendations:

28D1. Non-US Chess ratings verified.

Players who are known to have ratings or categories of other types, such as foreign, FIDE, regional, or US Chess Quick (or if a Quick tournament, US Chess regular), which can be verified.

It is recommended that such players not be considered unrated and that their ratings be used, adjusted if necessary to be consistent with the US Chess rating scale. If a player has more than one non-US Chess rating, the highest should be used.

Currently, the following adjustments are believed to be roughly appropriate. Changes are likely in the future and will be announced in US Chess rating supplements.

- a. Bermuda, Jamaica, Canada, and US Chess Quick (or US Chess regular at Quick tournament): No adjustment needed.
- b. Quebec (FQE): Add 100 points.
- c. FIDE: The following three formulas are provided for guidance:
 - (1) $\text{US Chess} = \text{FIDE} + 50$
 - (2) $\text{US Chess} = 0.895 (\text{FIDE}) + 367$
 - (3) $\text{US Chess} = \text{FIDE} + 100$

Formula (1) represents an average conversion. This means that 50 percent of the time the FIDE-rated player will be stronger than his or her converted US Chess rating would indicate. This becomes important for prize considerations when the FIDE rating is in the low 2100s; i.e., FIDE players between 2100 and 2149 will remain in the US Chess Expert class after their ratings are converted with this formula. By using formula (2), the FIDE-rated player will be stronger than his or her converted US Chess rating only 10 percent of the time, thus providing a degree of protection for the players with established US Chess ratings. Formula (3) provides a great degree of protection for players with established US Chess ratings without compromising the integrity of the FIDE player's strength compared to their new converted US Chess estimate rating. The above is for players with FIDE ratings but no US Chess ratings.
- d. England: Multiply the 3-digit rating by 8 and add 700.
- e. Germany (Ingo System): Multiply by 8, and subtract answer from 2940. Lower Ingo numbers reflect greater strength.
- f. Most nations not named: Add 200 points.
- g. Ratings or categories of the former Soviet Union or of the Philippines: Add 250 points. If a category, use the midpoint—for instance, a Russian Candidate Master should be $2100 + 250$ or 2350.
- h. Brazil, Peru, Colombia, or possibly other nations' ratings: These have proved highly unreliable. Players from these countries should not be considered eligible for prizes for classes below 2200 based on such ratings.

28D2. Non-US Chess ratings claimed without verification.

Players who state they have a rating, as listed in [28D1](#), which cannot be verified.

Directors may assign ratings ([28E](#)), but they should not be under 2200 if this would make the player eligible for a class prize.

28D3. US Chess label or printout ratings.

Players who have unofficial initial US Chess ratings on labels or printouts that have not yet appeared in a rating supplement, and who are believed to have no foreign ratings or categories.

Directors are encouraged to use such ratings without adjustment. Players with fewer than four career games, though, are unrated.

28D4. Director-calculated ratings.

Players who have played in one or more US Chess-rated events from which their approximate strength may be calculated but do not yet have even unofficial ratings, and who are believed to have no foreign ratings or categories.

Directors may calculate and use such ratings, but if their calculation puts the player within 100 points of a higher prize category, the assignment (28E) should be raised to put the player in the higher category. Players with fewer than four career games are unrated.

28D5. Assignments based on nonrated activity.

Players lacking known results in US Chess-rated tournaments and believed to have no foreign ratings or categories, but whose strength may reasonably be approximated from other play, such as nonrated club activity, tournaments, or speed games.

Directors may assign ratings (28E), but they should not be under 2200 if this would make the player eligible for a class prize.

28D6. No information on player available.

There are players with no known results, ratings, or categories of any kind.

These players are unrated and should be indicated by *NEW* on the pairing and wall chart. They should not be assigned ratings for prize purposes. If assignments are used for pairing purposes, these should not appear on the wall chart.

28D7. Improperly assigned ratings.

If a director assigns a player rating (28E) that is in violation of any part of 28D, and this is pointed out before prizes are awarded, that player shall not be eligible for prizes based on the assigned rating.

28E. Assigned ratings for rated players.

The director may assign a rating to any rated player.

28E1. Rating level.

The assigned rating shall not be lower than the player's last published US Chess rating, or its foreign or FIDE equivalent, adjusted if necessary, if the player lacks a US Chess rating.

28E2. Cause for assignment.

A rating may be assigned only for reasonable cause, including, but not limited to, the following:

- a. The player has shown significant superiority to those in a particular class.
- b. The player has demonstrated a tendency to achieve much better results when significant prizes are at stake than when they are not.
- c. The player's rating has recently dropped into a lower class due to results that are statistically highly unlikely.
- d. The player's moves, time management, statements, or other actions during play in a previous tournament have caused the director to conclude that the player did not make a reasonable effort to avoid losing games.

28E3. Notification.

The director should notify a player assigned a rating, in advance of the tournament if possible, so the player will have this information when deciding whether or not to enter. However, such notification is not always possible, since the cause for assignment may not be evident to the director until the late-registration period, or even during the tournament.

28F. Validity of wall-chart ratings.

A properly assigned rating that appears on the wall chart without disclaimer is valid for both prizes and pairing purposes unless it is erroneous and a correction appears on a subsequent wall chart.

Directors who wish to use an assigned rating (28E) for pairing purposes but not prize eligibility should include a disclaimer on or near the wall chart next to the player's rating to explain that the rating is not valid for prize purposes.

28G. Old ratings.

Old ratings of inactive players are still valid. If an old rating cannot be located or confirmed from memory by a reliable person, the director should allow the player to receive a class prize only after confirmation of the old rating.

28H. Revising ratings after tournament begins.

The director for reasonable cause may revise the rating of any player at any time. If this results in a player being ineligible for the section he or she is playing in, the following procedures, 28H1-28H3, shall apply:

28H1. Removal.

The player shall be removed from that section.

28H2. Reassignment.

The director may offer the player the opportunity to continue in the tournament in an appropriate section, with half-point byes for games missed.

28H3. Entry fee refund.

- a. If the erroneous rating assignment is due to false, misleading or incomplete information provided by the player, including failure of the player to disclose a rating, the director is not required to refund the entry fee.
- b. If the erroneous rating assignment is primarily a mistake by the director or tournament staff, the entry fee should be refunded. If the player is given the option of continuing in a higher section, it is still appropriate to refund all or part of the fee if the player has missed sufficient rounds to substantially reduce prize chances.

28I. Opponents of expelled players.

If a player is removed from an event or section because of being made ineligible by a corrected rating (28H), the following adjustments shall be made to that player's opponents:

28I1. Expulsion before last round of tournament is paired.

Use the same procedure outlined in Rule 28I2.

28I2. Expulsion after last round of tournament is paired.

Earlier opponents of the expelled player shall have their results adjusted for tournament scoring purposes (see also 28I3) as follows:

- a. A player who lost to the expelled player shall instead receive a half-point bye.
- b. A player who drew the expelled player shall instead receive a win by forfeit.

28I3. Extra rated games

The actual results of each opponent vs. the expelled player shall be transferred to an "extra rated games" chart for US Chess rating purposes (28M4).

28J. The first round.

The director (or computer) flips a coin to decide who will play white on the first board, the higher- or lower-rated player. After ordering all the players by rating, the director divides the cards into two equal sized groups, pairing the highest player in the upper half against the highest player in the lower half, the second-highest in the upper half against the second-highest in the lower half, etc. Pairing programs do this automatically. **See also** 22B, Full-point byes; 22C, Half-point byes; 27A3, Upper half vs. lower half; 28A, Pairing cards or program; 28K, Late entrants;

28L, Full-point byes; 28M, Alternative to byes; 28S, Reentries; 29C1, Upper half vs. lower half; 29D, The odd player; 29E2, First round colors..

TD TIP: Directors often number the cards once they are in rating order. They then proceed to remove all requested byes; if there is, at that point, an odd number of players, the card for the lowest rated player, who will be assigned a bye, is removed. The cards are then divided into halves as described above.

Colors are alternated down through each half. If the coin toss determined that the higher-rated player on board one would receive white, the higher-rated on board two receives black, and so on. If there is an odd number of players, the lowest-rated player, but not an unrated player, receives a one-point bye. **See also** 22B, Full-point byes; 28L, Full-point byes; and 28M, Alternative to byes.

TD TIP: When using a pairing program make sure that it is set up not to give a bye to an unrated player or to players that have requested a bye in a future round.

The boards are numbered in the playing hall and the individual or team pairings are posted on pairings sheets (Figure 3), which indicate each player's or team's opponent, board number, and color. It is customary to assign the highest-rated player or team in the top score group to board one, the second-highest in that group to board two, etc. The director may modify the pairings somewhat, especially in the early rounds, in order to avoid pairing family members, close friends, or members of the same club against one another.

TD TIP: Consult the pairing software manual for information on how to set up the program to avoid unwanted pairings and for information on producing an alphabetical list of players, their opponents, their board numbers, and their colors. Many players find an alphabetical list more convenient than a board-by-board pairing list.

TD TIP: It is useful to post more than one set of pairings in large events; however, to prevent confusion regarding where game results are to be posted, remove all sets of extra pairings about 15 minutes into the round.

| Pairings for Round 5 | | | | |
|----------------------|--------|--------------------|--------|-----------------|
| Bd | Result | White | Result | Black |
| 1 | | Enpassant, Edwin | | Attack, Allen |
| 2 | | Bishop Barbara | | Files, Fred |
| 3 | | Goodplayer, Gordon | | Chesser, Curtis |
| 4 | .5 | Defender, Donald | .5 | Helpmate, Harry |

Figure 3

28K. Late entrants.

The director may accept and pair entrants after the announced closing time for registration, but late entrants shall forfeit any round missed if it is inconvenient or too late to pair the players for play, or may take a half-point bye (22C) if the tournament offers them for that round. **See also** 28B, Numbering late entrants and 28S, Reentries.

28L. Full-point byes.

28L1. Explanation and display.

In any round in which the total number of players in a tournament or section of a tournament is uneven, one player is given a full-point bye. The player's score is posted as a win on the wall chart, but circled to indicate that the game was not played. Wall charts generated by computer may print *bye*, or circle the score. **See also** 22B, Full-point byes and 28M, Alternatives to byes.

28L2. Determination.

In the first round, the bye is given to the player with the lowest US Chess rating but not to an unrated player or a late entrant. In subsequent rounds, it is given to the lowest-rated player in the lowest score group but not to an unrated player. If there are no rated players eligible for the bye in the lowest score group, it is given to an unrated player who

has played in a US Chess-rated tournament too recently to obtain a published rating. If this, too, is impossible, a new player may be assigned the bye. New players should be indicated by *NEW* on the pairing card and wall chart. **See also** [28J, The first round](#); [28S, Reentries](#); and [28L4, Full-point byes after half-point byes](#).

Variation (unannounced) 28L2a. Giving the bye to a higher rated player.

Give the bye to a higher rated player if doing so improves the overall color allocation for the lowest score group, subject to the limits specified in rules 29E5a and 29E5b. **See also** [29E5a, The 80-point rule](#); and [29E5b, The 200-point rule](#).

28L3. Players ineligible for full-point byes.

A player must not be given a full-point bye more than once, nor should one be awarded to a player who has won an unplayed game due to the opponent's failure to appear.

***TD TIP:** Not all pairing software takes care of this task automatically; therefore, directors should check the software manual to determine the correct setting(s) to ensure that [28L3](#) is in force. Directors may also check software pairings each round to ensure that [28L3](#), as well as all other pairing rules, are being enforced.*

28L4. Full-point byes after half-point byes.

A full-point bye should not be awarded to a player who has previously taken or committed to a half-point bye unless all others in the score group have already had a bye or a no-show forfeit win. **See also** [22C, Half-point byes](#).

***TD TIP:** Not all pairing software takes care of this task automatically; therefore, directors should check the software manual to determine the correct setting(s) to ensure that [28L3](#) and [28L4](#) are enforced. Directors may also check computer pairings each round to ensure that [28L3](#) and [28L4](#), as well as all other pairing rules, are being enforced.*

28L5. New players in four-round events.

Directors should try to ensure that new players play at least four games in their first tournament in order to obtain official ratings. In a four-round event, if only new players are available for byes in the bottom score group, the bye may be given to a player one score group above. This should not be done if the player receiving the bye has a substantial chance for a prize. It is preferable to use [28M, Alternatives to byes](#), than to assign a bye to a new player. **See also** [22C, Half-point byes](#).

28M. Alternatives to byes.

Awarding byes may be necessary for the smooth progress of a tournament, but they deprive a player of an expected game. To avoid this, several methods have been used successfully. Directors are encouraged to provide games for players who do not want byes. These methods may be combined. **See also** [22B, Full-point byes](#); [22C, Half-point byes](#); [27A3, Upper half vs. lower half](#); [28A, Pairing cards or program](#); [28J, The first round](#); [28K, Late entrants](#); [28L, Full-point byes](#); [28S, Reentries](#); and [29C1, Upper half vs. lower half](#).

28M1. The house player.

Sometimes a spectator will agree to play a game against a player who would otherwise expect a bye. It is desirable that this spectator has a rating approximately within the range of the lowest score group, but this is not required. The player is voluntarily giving up a free point to play, so no one can legitimately claim the opponent is too weak.

Sometimes the player would rather play an unusually strong opponent than receive a bye. This also is acceptable, but if the strong opponent is rated too high for the section, the director may consider retaining the original bye and listing both players for a rated game in a higher section or an *extra rated games* section. **See also** [28M4, Extra rated games](#).

***TD TIP:** Directors have found it useful to first ask the player receiving the bye if they would like to keep the bye or play a house player. Some players prefer to take the bye to rest for the next round or ensure that they will not be assigned a bye in future rounds. Directors and organizers who require the odd player to essay a game against a house player, rather than give the player the choice, would be wise to announce this policy in pre-tournament publicity and at the site. A popular alternative, described below, is to use a permanent house player, not eligible for prizes, who is paired normally, not necessarily against the odd player who would have received the bye.*

If a permanent house player is available, this is the best solution. Such a player is paired normally whenever there is an odd number, not paired when there is an even number, and may even receive half-point byes if the tournament allows them.

TD TIP: *Directors using pairing software find it best to award the permanent house player byes for all rounds and then remove those byes if the house player is needed. This technique prevents the pairing program from automatically pairing the house player, leaving the decision in the hands of the director round by round.*

It is not required that a house player be paired against the player who would otherwise receive the bye. Sometimes it is more appropriate to insert a relatively strong house player into a higher score group. In this case, neither the player paired against the house player nor the one who otherwise would have received the bye has the right to refuse to play.

A US Chess-rated commercially available computer may be used as a house player only if computer participation for the tournament was advertised in advance (36C).

Usually, a player whose full-point bye is replaced by a temporary house player should be assigned no additional full-point byes in the tournament. An exception may be appropriate if the house player was strong and the player is competing for a class prize against others who have received full-point byes.

28M2. Cross-round pairings.

The player who expects the bye is asked to wait until one of the games in the lowest score groups has finished. The loser of that game is then asked to play the next-round game early, after a brief rest. The director then pairs the two players and marks the pairing and the result in the appropriate round boxes for each player: for the player who would have received the bye, in the current round; for the opponent, in the next round. This sometimes has the advantage of eliminating the need for a bye in the following round.

Cross-round pairings work best in scholastics and events for low-rated players (e.g., under 1400), because the bottom boards in such events usually play very quickly. If a cross-round pairing is planned and there is a significant delay before the game starts, the director may offer the option of such a pairing only if both sides start with time elapsed from their clocks. Either player may refuse, which may lead to the cross-round pairing being abandoned and the original bye reinstated.

The use of cross-round pairings should be specially indicated on the US Chess rating report. When using a pairing program see the manual for information on how to set the software to perform this task

28M3. Cross-section pairings.

In a tournament with multiple sections, there may be more than one section with a bye for a particular round. In this case, a cross-section pairing may be more desirable than a cross-round pairing, as the game can begin immediately. The player in the lower of the two sections involved retains the bye, but is added to the pairings and wall chart of the higher section for a rated game. The player in the higher section has a game that counts for both score and rating purposes, rather than a bye. Such a player should not subsequently be assigned a full-point bye or a bye alternative.

28M4. Extra rated games.

Directors may accommodate players who wish to play a rated game without giving up a full-point bye by placing both players in an *extra rated games* section with its own wall chart. This section is also used by directors to report correct results of games to US Chess that remain uncorrected (for pairing and prize purposes) in other sections. **See also 15H, Reporting of results; 15I, Results reported incorrectly; 28I3, Extra rated games; and 29H3, Double forfeit of unreported game.**

28N. Combined individual-team tournaments.

Scholastic events are often held as individual Swiss systems, with both individual and team awards. Players are paired individually and team standings are determined by adding the scores of each school's top scorers, usually the top four. The director should try to avoid pairing teammates against each other, but an absolute prohibition of such pairings can give an unfair advantage in the individual standings to players on strong teams, who may be "paired

down” against players with a lower score rather than facing each other. **See also** [28A, Pairing cards or program](#) and [31A, Combined individual-team tournaments](#).

28N1. Plus-two method.

- a. If a score group can be paired among itself without players from the same team facing each other, this should always be done.
- b. For score groups of less than plus two (*plus two* means at least two more wins than losses), if there is no way to pair the score group without players from the same team facing each other, these players should be raised or lowered into the nearest appropriate score group to avoid pairing teammates.
- c. For score groups of plus two or greater (at least two more wins than losses), players should not be removed from their score group in order to avoid playing those from the same team.

Variation 28N2.

Players from the same team should never be paired against each other unless it is the last round, one is in first place, and if this leader is not paired against a teammate he or she will have to play someone with a lower score.

Variation 28N3.

[Rule 28N1](#) may be modified to use a score other than plus two as the point at which teammates will not be paired out of their score group to avoid facing each other.

Variation 28N4.

The director may decide when it is appropriate to pair players from the same team against each other to maximize fairness in individual or team standings.

28O. Scoring.

The tournament director records the results of the games on the pairing cards or enters them into the computer. These results should also be posted, as quickly as convenient, to wall charts that are prominently displayed (Click on [Figure 4](#) or go to next page.)

| # | Name/Rtng/ID | Rd 1 | Rd 2 | Rd 3 |
|---|-------------------|------|------|------|
| 1 | Allen Attack | B 5 | W 4 | B 2 |
| | 2000 11111111 | 1 | 2 | 2 |
| 2 | Barbara Bishop | W 6 | B 3 | W 1 |
| | 1950 22222222 | 1 | 2 | 3 |
| 3 | Curtis Chesser | B 7 | W 2 | B 5 |
| | 1900 33333333 | 1 | 1 | 1.5 |
| 4 | Donald Defender | W 8 | B 1 | W 7 |
| | 1850 44444444 | 1 | 1 | 2 |
| 5 | Edwin Enpassant | W 1 | B 8 | W 3 |
| | 1800 55555555 | 0 | 1 | 1.5 |
| 6 | Fred Files | B 2 | W 7 | B 8 |
| | 1750 66666666 | 0 | 0 | 0 |
| 7 | Gordon Goodplayer | W 3 | B 6 | B 4 |
| | 1700 77777777 | 0 | 1 | 1 |
| 8 | Harry Helpmate | B 4 | W 5 | W 6 |
| | 1650 88888888 | 0 | 0 | 1 |

Figure 4

TD TIP: Directors may want to prepare a handout to explain to new tournament players how to interpret the information that appears on wall charts. For example: In this illustration Allen Attack is rated 2000 and is first on the list because he is the highest rated player in the tournament. Information about what color he played against which opponent is indicated in round one as Black against player number 5, Edwin Enpassant (B 5). He won the game (each win = 1 point, each draw = 0.5 points (or ½), and each loss = 0 points). In round two he played white against player 4 (W 4) and won again (indicated by a 2: round one score of 1 + the win in round two = 2). In round three Allen played Black against player number 2 (B|2); he lost that game (2 = round two cumulative score of 2 + round three score of 0 for losing).

2801. Computer wall charts.

An advantage of using a computer is that it can print updated wall charts each round. In a large event, avoiding the need to enter the color and opponent of each player on the wall chart saves considerable time.

However, it is still recommended that the scores of each player be manually updated as soon as possible. It may be tempting to wait so that the computer can print out all or many scores, but making the players wait for hours to learn results may make the tournament less enjoyable.

28P. Unplayed games.

If a player fails to appear within one hour of the start of the round or by the end of the first time control, whichever comes first, the game is scored as a forfeit loss for the player and a forfeit win for the opponent. That player is then dropped from the tournament unless he or she presents an acceptable excuse to the director. The player's subsequent games are also scored as zero. A player may also withdraw from the tournament by notifying the director, in which case the remaining games are scored as zero.

The scores of unplayed games, including byes, are marked with an *F* or circled on the pairing cards, on the wall chart, and on the rating report. Unplayed games are not US Chess rated. Note that a game in which both sides make moves is always rated, even if a player forfeits on time or for an infraction of the rules; this type of forfeit is never marked with an *F* or circled. **See also** [13D, Late arrival for game](#); [13F, Late arrival by both players](#); and [22, Unplayed Games](#).

TD TIP: Directors using pairing software should consult the software manual for details on how the program handles this procedure.

28Q. Pairing unfinished games.

If at all possible without imposing unreasonable delay in the start of the next round upon the other players, all games from one round should be finished before the next round is paired. If this is not possible, the director has several options (**see also** [18F3, Sudden death](#)):

28Q1. Modified Kashdan system.

The director may approach a game in progress, instruct the player on move to seal ([18A](#)), and inform both players that either player who offers a draw and so informs the director before pairings for the next round begin will be paired as having drawn, and that either player who does not do so will be paired as having won. The director should stop both clocks before this intervention and restart the clock of the player who is to seal at its conclusion.

This modified method, probably the best way to handle adjournments, has several advantages over the original Kashdan system, in which the director privately asked each player what result he or she was seeking. It is much quicker, does not pressure players to respond immediately, and makes it clearer to the players that the draw offer may be accepted at any time during adjournment.

TD TIP: If both players indicate they are playing for a draw, the director can declare the game over with a result of a draw for both players.

28Q2. Temporary adjudications.

The director can adjourn the unfinished game(s) and either pair the players as having drawn, having won and lost, or having won and drawn. The latter might be appropriate if one player has winning chances and the opponent has drawing chances. If necessary, the director may consult strong players whose own pairings are not affected for help. **See also** [18F, Problems of the next-to-last round](#) and [29F, Last round pairings with unfinished games](#).

28R. Accelerated pairings in the first two rounds.

In a tournament where the number of players far exceeds the number two raised to the power of the number of rounds (**see** [27, The Swiss System Tournament](#)), more than one perfect score is possible, and top contenders may not play each other. The director has pairing options that have the effect of adding an extra round or two to the tournament without any additional games being played.

Accelerated pairings are most effective in a one-section tournament, an Open Section, or a section in which no more than about half the players are in the same 200-point rating class. Accelerated pairings may fare poorly in a primarily one-class section, as an accelerated pairing for round two will pit the lower-rated 1-0 against the higher-rated 0-1; thus, decreasing the odds (instead of the intended increasing of the odds) that the higher rated player will win.

[28R2, Adjusted rating method](#), is more effective but more complicated than [28R1, Added score method](#), while the little-tested [Variation 28R3, Sixths](#), is intended for events with an especially small ratio of rounds to players and large rating differences.

28R1. Added score method.

Before the first round, the players are numbered, ordered by rank, byes removed, the odd player assigned a bye, if any, removed, and the remaining players are divided into two equal sized groups. The director notes the top number in the lower half and, for the first two rounds, mentally adds one point to the scores of all players ranked above that number, for pairing purposes only. The director divides the players accordingly and pairs normally.

TD TIP: Pairing software usually has an option to do accelerated pairings.

The effect, in the first round, is to have the top quarter play the second quarter and the third quarter play the fourth quarter. For the most part, the effect in the second round will be to have the top eighth play the second eighth, the second quarter play the third quarter, and the seventh eighth play the last eighth. This method decreases the number of perfect scores.

28R2. Adjusted rating method.

Before the first round, after the bye, if any, is issued, the players are arranged in the normal order, top rated to lowest rated. Then the field is divided from top to bottom into four groups (A1, B1, C1, and D1) as close to the same size as possible, and paired as follows:

A1 vs. B1 and C1 vs. D1. These first-round pairings are the same as in Variation 1.

For the second-round pairings, the players are regrouped as follows:

1. A2: Winners from A1 vs. B1. If there is an odd number of players, the lowest-rated drops to the top of C2.
2. B2: Non-winners from A1 vs. B1, with players who drew having a temporary 100 points added to their ratings. If there are more players in B2 than C2, the lowest-rated losers from B2 are dropped to the top of D2, until B2 has the same number of players as C2. If there are fewer players in B2 than C2, the highest-rated players from D2 are raised to the bottom of B2 until B2 has the same number of players as C2.
3. C2: Non-losers from C1 vs. D1, with players who drew having a temporary 100 points subtracted from their ratings.
4. D2: Losers from C1 vs. D1.

Each of these groups is arranged in rating order, including the temporary adjustments for first-round performances. Then each group is paired as follows:

1. A2: This group is divided into halves. The upper half plays the lower half according to basic pairing methods.
2. B2 and C2: These groups play each other, with the top player in B2 facing the top in C2, etc., according to basic pairing methods. This will result mostly in players with different scores playing—1 vs. 0, 1 vs. 0.5, or 0.5 vs. 0—though an occasional 0.5 vs. 0.5 is also possible. Whenever the players have different scores, the one with the lower score will be higher-rated.
3. D2: This group is divided in half. The upper half plays the lower half according to basic pairing methods.

For the third and subsequent rounds, the temporary rating adjustments are ignored and the pairings are made according to the basic system.

This variation of accelerated pairings produces only about half the number of perfect scores achieved with the basic system. It therefore decreases the likelihood of multiple perfect scores, and causes the final standings to be more dependent on games between the top-rated players.

Variation 28R3. Sixths.

Apply the same principles as 28R2, but divide the field into sixths in the first round and pair the first sixth vs. the second, third vs. fourth, and fifth vs. sixth. In round two, pair the winners of 1 vs. 2 against each other, the non-winners of 1 vs. 2 against the winners of 3 vs. 4, the non-winners of 3 vs. 4 against the winners of 5 vs. 6, and the non-winners of 5 vs. 6 against each other.

28S. Reentries.

Tournaments with alternate schedules allowing players a choice of starting times for the early rounds often permit reentry, in which the player abandons or takes byes in the earlier-starting schedule in order to enter the later-starting

schedule. For example, there may be a three-day schedule with round one at 8:00 p.m. Friday and a two-day schedule with round one at 10:00 a.m. Saturday, with the two schedules merging for round two starting Saturday afternoon. A player who loses or draws on Friday night may choose to *start fresh* by reentering the two-day schedule, in which case the Friday game, while still rated, would not damage the player's chances for prizes. **See also** 22B, Full-point byes; 22C, Half-point byes; 27A3, Upper half vs. lower half; 28A, Pairing cards or program; 28J, The first round; 28K, Late entrants; 28L, Full-point byes; 28M, Alternative to byes; and 29C1, Upper half vs. lower half.

TD TIP: *Whether the director is pairing a tournament by hand or using pairing software, it is wise to note reentered players by adding a RE (for reentered) at the end of their name to distinguish the reentries from their original entries.*

28S1. Reentry playing opponent twice.

If one player has reentered and the other has not, they should not be paired against each other for a second time (27A1). Even though the reentry is considered a new entry, from the standpoint of the opponent who did not reenter it is the same player.

28S2. Reentries playing each other twice.

If two reentries have already faced each other while each was playing his or her original entry, they are both considered a new entry and may be paired against each other for a second time, since neither new entry has faced the other new entry.

28S3. Reentry colors.

Reentries are treated as having no color history; the colors from their original entries are disregarded. **See also** 29E, Color allocation.

28S4. Reentry with half-point byes.

Players sometimes reenter the same schedule with half-point byes replacing games missed. 28S1, 28S2, and 28S3 all apply to such reentries as well.

28S5. Reentry scores.

Unless the organizer states otherwise prior to the beginning of the first round, a player who reenters carries the better score, or the best score in the case of multiple reentries, into the later rounds. In the case of equal scores, the latest score must be used. The color and opponent history of the entry carried forward accompanies it in all cases. The organizer, however, has the option of declaring in advance that a reentry must abandon all recourse to the earlier entry(ies), in which case the latest score and color history are carried forward, regardless of comparison to all earlier results. **See also** 32C5, Reentry prizes.

28T Variation. Players may request a non-pairing against each other.

Individual players may request that they not be paired against each other in any tournament. Due to the pairing problems involved, the director may not be able to honor this request.

TD TIP: *Honoring requests of players to not be paired against each other can present serious pairing difficulties for the director, especially in small events and in the later rounds in any tournament; however, sometimes players who often play against each other outside of the tournament do not enjoy traveling to a tournament to simply play against each other again. Some directors honor the player's request for the first half of the tournament only. Directors may automatically "not pair" players from the same family, club, team, area, etc. without a request from the players; however, if at all possible those directors might want to consider consulting with those players first. After all, those players may not mind being paired against each other.*

29. Swiss System Pairings, Subsequent Rounds

29A. Score groups and rank.

The words *score group* and *group* refer to players having the same score, even if there is only one player within a group. The players in each such score group are paired against each other (27A2) unless they have already faced each other (27A1) or are odd players (29D) or must play odd players paired from another score group (29D). In a

combined individual and team tournament, players are sometimes paired out of their score groups to avoid facing teammates (28N). Individual rank is determined first by score (the greater the number of points, the higher the rank within the tournament) and then by rating within a score group (the higher the rating, the higher the rank).

TD TIP: *Score group determines rank when players are paired outside of their score group. Rating determines rank within a score group. For example: the lowest-rated player in the 4 point score group is rated 1991. The highest-rated player in the 3.5 score group is rated 2105. The 1991 player is ranked higher (the 4-point score group) than the 2105 player (the 3.5 score group). This ranking may be important when determining colors.*

29B. Order of pairing score groups.

In general, the director pairs the groups according to rank, starting with the highest and working down. If games within some score groups are still unfinished shortly before the scheduled start of the next round, the director may wish to modify this order and pair around the groups with games still going on, taking care to provide for any *odd players*. It may be worthwhile to ask the players involved in a long game to confirm that they are playing the next round, as notice to the contrary after the game would be too late and would affect the odd player situation.

It may be helpful to make a quick table beforehand, listing the different score groups in descending order and the number of players in each group, and drawing arrows to show where players must be dropped (in the case of the odd player) to play someone from the group below.

TD TIP: *Instead of a chart, some directors have been successful placing little sticky notes, drawing arrows and/or noting the number of players in each score group, on the top of a pile of pairing cards for that score group. Pairing programs take care of this task automatically.*

29C. Method of pairing score groups.

In the second and subsequent rounds, the players are paired as follows:

29C1. Upper half vs. lower half.

If there is an even number of players within a group, they are placed in order of rank (rating), divided in half, and the upper half is paired against the lower half, in as close to consecutive order as possible (e.g., in a group with 20 players, the first ranked would play the eleventh ranked, the second the twelfth, and so on). **See also** 22B, Full-point byes; 22C, Half-point byes; 27A3, Upper half vs. lower half; 28A, Pairing cards or program; 28J, The first round; 28K, Late entrants; 28L, Full-point byes; 28M, Alternative to byes; 28S, Reentries; 29D, The odd player; 29E2, First round colors; 29E3, due colors in succeeding rounds; 29E4, Equalization, alternation, and priority of color; and 29E5, Colors vs. ratings.

29C2. Other adjustments.

Transpositions are made in order to avoid pairing players who have already played each other and to give as many players as possible their equalizing or due colors. To this end it is also permissible to make an interchange between the bottom of the upper half and the top of the lower half. **See also** 27A1, Avoid players meeting twice; 29E, Color allocation; 29E3, Due colors in succeeding rounds; 29E4, Equalization, alternation, and priority of color; and 29E5, Colors vs. ratings.

29D. The odd player.

Pairing players out of score group.

There will often be situations where some players cannot be paired within their score group. This will always be true if there is an odd number of players with a given score, and can also happen when players within a score group have already played each other, or are otherwise restricted (family members, same scholastic team, requested non-pairs, etc.) from playing. At least one, and possibly more, players will have to be dropped to play in a lower score group. In such situations, the first priority (other than avoiding restricted pairings) is to have players play as close to their score group as possible.

29D1. Determination.

- a. In the case of an odd number of players, the lowest-rated player, but not an unrated player, is ordinarily treated as the odd player and is paired with the highest-rated player he or she can play in the next lower group. Care must be taken in doing this that the odd player can be paired in the next score group, that the remaining members of both affected score groups can be paired with each other, that the odd player has not played all the members of the next lower group, and that the color consequences are acceptable (29E, 29E3). **See also** 28S3, *Reentry colors*; 29E4, *Equalization, alternation, and priority of color*; and 29E5, *Colors vs. Ratings*.
- b. If the conditions in (a) cannot be met, then try treating the next lowest rated player as the odd player, or pairing the odd player with a lower ranking player in the next score group. In deciding whether to make a switch of either the odd player or the opponent, you should look only at the rating difference of the players being switched. There is no rating limit on the permitted switch if it is needed to keep the score groups intact. However, switches to correct colors should stay within the appropriate limits (29E5). **See also** 28S3, *Reentry colors*; 29E, *Color allocation*; 29E3, *Due colors in succeeding rounds*; 29E4, *Equalization, alternation, and priority of color*.
- c. If the entire score group is unrated, then an unrated player must be designated as the odd player and dropped.

29D2. Multiple drop downs.

It is sometimes necessary to jump over an entire score group to find an appropriate opponent for an odd player.

A pairing which drops a player down for one or more score groups should be chosen over a pairing which drops two or more players down for one or more score groups (This can be relaxed in low score groups if necessary to allow the bottom score groups to be paired legally). It is acceptable to pair the player against a somewhat lower-rated player to equalize or alternate colors, but only within the rules for transposition as explained in 29E5, *Colors vs. ratings*.

The odd player is normally paired with the highest-rated player he or she has not met from the next lower group. It is acceptable to pair the player against a somewhat lower-rated player to equalize or alternate colors, but only within the rules for transposition as explained below.

Examples:

1. **One odd player:** If Group 1 has only one player with a perfect score, who has already played the only two members of Group 2, then the player from Group 1 must play the highest-rated player in Group 3 that he or she has not yet played in the tournament, provided that this allows the remaining members of Groups 2 and 3 to be paired.
2. **Two odd players:** If the only two players in Group 1 have already met, they would both be odd players. It is desirable for them to be paired with the highest-rated players in Group 2 whom they have not played before. The higher-rated player from Group 1 should be paired with the highest-rated player in Group 2, and the lower-rated player from Group 1 should be paired with the next-highest rated player in Group 2, provided that this allows the remaining members of Group 2 to be paired.
3. **Two odd players from two different score groups:** There is only one player in Group 1. There is only one player in Group 2. These players have already played each other. In this example we have a player dropping down more than one score group. The player being dropped from the higher score group is considered to be the higher-ranked and is paired first.

TD TIP: *Dropping an odd player over multiple score groups just to improve color allocation is an unacceptable practice. Applying 28S3, *Reentry colors*, 29E, *Color allocations*, 29E3, *Due colors in succeeding rounds*, 29E4, *Equalization, alternation, and priority of color*; and 29E5, *Colors vs. Ratings* is more proper. If applications of*

those rules do not solve the color allocation problems, then the possibility of selecting a different odd player may be more equitable.

29E. Color allocation.

The director assigns colors to all players. The objective in a tournament with an even number of rounds is to give white and black the same number of times to as many players as possible; in an event with an odd number of rounds, each player should receive no more than one extra white or black above an even allocation.

In addition to the task of equalizing colors, the director, after the first round, tries to alternate colors, by giving as many players as possible their due (*correct* or expected) color, round by round. The due color is usually the color a player did not have in the previous round, but not always. For example, a player who had white in rounds one and two and black in round three has a due color of black in round four, as equalization has priority over alternation. **See also** [27A4, Equalizing colors](#); [27A5, Alternating colors](#); [28J, The first round](#); [29E2, First round colors](#); [29E3, Due colors in succeeding rounds](#); [29E4, Equalization, alternation, and priority of color](#); [29E5, Colors vs. ratings](#); and [29M, Recommendations](#).

29E1. Unplayed games.

Unplayed games, including byes and forfeits, do not count for color.

29E2. First-round colors.

[22B, Full-point byes](#); [22C, Half-point byes](#); [27A3, Upper half vs. lower half](#); [28A, Pairing cards or program](#); [28J, The first round](#); [28K, Late entrants](#); [28L, Full-point byes](#); [28M, Alternative to byes](#); [28S, Reentries](#); [29D, The odd player](#); [29E3, due colors in succeeding rounds](#); [29E4, Equalization, alternation, and priority of color](#); [29E5, Colors vs. ratings](#); and [29M, Recommendations](#).

TD TIP: *Example: After the coin toss, the number one player in the top section of a class tournament was assigned to play white. All other top boards in all other sections are assigned white based on this one coin toss. In each of the sections the other players are assigned colors according to [29E2](#). Pairing programs do this automatically.*

29E3. Due Colors in succeeding rounds.

As many players as possible are given their due colors in each succeeding round, so long as the pairings conform to the basic Swiss system rules. **See also** [27A, Basic Swiss system rules](#); [27A4, Equalizing colors](#); [27A5, Alternating colors](#); [29C2, Other adjustments](#); and [29M, Recommendations](#).

29E3a. Due colors defined.

A player who has had an unequal number of whites and blacks is due the color that tends to equalize the number of whites and blacks. A player who has had an equal number of whites and blacks is due the opposite color to that he received in the most recent round. Colors assigned in games won or lost by forfeit do not count in deciding due color. A player who has played no games is due neither white nor black.

29E4. Equalization, alternation, and priority of color.

Equalization of colors takes priority over alternation of colors. First, as many players as possible are given the color that tends to equalize the number of times they have played white and black. After that is accomplished, as many players as possible should be given the color opposite to that which they played in the previous round. **See also** [27A, Basic Swiss system rules](#); [27A4, Equalizing colors](#); [27A5, Alternating colors](#); [29A, Score groups and rank](#); [29C2, Other adjustments](#); and [29M, Recommendations](#).

TD TIP:

Example 1. A player who has had BWB is due white (equalization of colors).

Example 2. A player who has had BW is due black (alternation of colors).

Example 3. A player who has had WWB is due black (equalization takes priority over alternation).

Example 4. A player who had white in round one, then won by forfeit in round two, is due black in round three regardless of which color he had been assigned in the unplayed round two game.

Pairing players due the same color. Whenever it is necessary to pair two players who are due the same color the following rules apply:

1. If one player has had an unequal number of whites and blacks, while the other has had equal colors, the player who has had unequal colors gets due color. Example: WBW gets black over BxW, where x denotes any unplayed game—full-point bye, half-point bye, forfeit win, forfeit loss, etc.
2. If both players have had an unequal number of whites and blacks, the player with the greater total color imbalance gets due color. Example: WWBW gets black over xWBW.
3. If both players have had an equal number of whites and blacks, or both are equally out of balance, and if they had opposite colors in the previous round, the players should be given colors opposite to that which they played in the previous round. Example: WWB gets white over WBW.
4. If both players have had an equal number of whites and blacks, or both are equally out of balance, and if they had different colors in one or more prior rounds, priority for assigning color should be based on the latest round in which their colors differed. One or both players should be assigned the color opposite to that which they played in that round. Example 1: WBWB gets white over BWWB, because the first player had black in round two, the latest round in which colors differed. Example 2: BWxBW gets white over BWBxW, because the first player had black and the second had no color in round 4, the latest round in which colors differed.
5. If both players have had the same color sequence, the higher-ranked player gets due color. The higher-ranked player is the player with the higher score. If the players have the same score, the higher-ranked player is the higher-rated (*rank* is defined in [29A](#)).

TD TIP: Rule 5 takes effect only if rules 1-4 do not decide the issue. Unless the players have had identical color sequences, rules 1-4 should be used.

Variation 29E4a. Priority based on plus, even, and minus score groups.

When applying rule 5 above, the higher-ranked player in plus and even score groups receives priority for color allocation, while the lower-ranked player in minus score groups receives priority. This variation minimizes color problems in the very low score groups, as well as the very high, which are more likely to have color problems in later rounds because these are statistically the smallest groups.

Variation 29E4b. Alternating priority.

When applying rule 5 above, if two players within a score group are both due the same color, the higher-rated player receives due color. But if several such situations exist within the group, the first higher-rated player receives due color, the second does not, the third does, and so on, alternating entitlement from higher- to lower-rated player. This applies both to equalizing and alternating colors.

Variation 29E4c. Priority based on lot.

When applying rule 5 above, in the last round of a tournament, the director may choose to let opponents with equal entitlement to colors choose their own colors by lot, but only after making all the pairings necessary to come closer to equalized and alternate allocations. For example, if after four rounds both players had received WBWB, for the fifth and final round the director might choose to let the players choose for colors rather than assign them automatically by using one of the procedures outlined above. If this system is adopted, it must be used for all such cases without exception. **See also** [29E5f1, Last-round exception](#) and [29I, Class pairings](#).

Variation 29E4d. Priority based on rank.

Rule 4 above does not apply. If both players have had an equal number of whites and blacks (or both are equally out of balance), and if they have had the same colors in each of the preceding two rounds, then the higher-ranked player gets due color.

TD TIP: Variation [29E4d](#) was the old main rule in the 4th edition of this rulebook; therefore, it is possible that it is still used by some directors and pairing programs. It is recommended that, when this variation is used, written notice be posted before the start of the tournament.

29E5. Colors vs. ratings.

Correct Swiss pairings should consider both colors and ratings, so a tournament director should exercise care not to distort either unduly. To improve colors a director may use either a transposition or an interchange of players. **See also** [27A, Basic Swiss System Rules](#); [27A3, Upper half vs. lower half](#); [27A4, Equalizing colors](#); [27A5, Alternating colors](#); and [29C2, Other adjustments](#).

A transposition is the practice of changing the order of players within the upper half or lower half of a group. An interchange involves switching a player from the bottom of the upper half with a player from the top of the lower half. **For more information** and examples see [29E5e, Comparing transpositions to interchanges](#) and [29E7, Examples of transpositions and interchanges](#).

***TD TIP:** Sometimes pairings get switched more than once. Directors switch players if they have faced each other before, are teammates, or are family members. Excluding those reasons, sometimes transpositions and interchanges occur more than once with the same player for any particular round. The arithmetic for interchanges and transpositions applies only to the first natural pairing (or the pairing after the aforementioned switches are made by the director) before any transpositions or interchanges are made compared to the final pairing after all transpositions and interchanges have been made.*

Transpositions and interchanges should be limited as follows:

29E5a. The 80-point rule.

Transpositions and interchanges for the purpose of maximizing the number of players who receive their due color should be limited to players with a pre-tournament rating difference of 80 points or less.

Example: WB vs. WB. To give one of these players a second straight black in round three is only moderately undesirable and does not justify a switch of over 80 points. **See also** [29E5b, The 200-point rule](#); [29E5c, Evaluating transpositions](#); [29E5d, Evaluating interchanges](#); [29E5e, Comparing transpositions to interchanges](#); [29E5h, Priority of equalization over ratings](#); and [29E7, Examples of transpositions and interchanges](#).

29E5b. The 200-point rule.

Transpositions and interchanges for the purpose of minimizing the number of players who receive one color two or more times more than the other color should be limited to players with a pre-tournament rating difference of 200 points or less. **See also** [29E5a, The 80-point rule](#); [29E5c, Evaluating transpositions](#); [29E5d, Evaluating interchanges](#); [29E5e, Comparing transpositions to interchanges](#); [29E5h, Priority of equalization over ratings](#); and [29E7, Examples of transpositions and interchanges](#).

***TD TIP:** It has been observed by experienced directors that there are fewer concerns from players paired to play the white pieces in violation of [29E5b](#) than when the situation is reversed and they are paired to play the black pieces in violation of this same rule*

Variation 29E5b1.

Transpositions and interchanges for the purpose of minimizing the number of players who receive black two or more times more than white should be limited to 200 points.

Example: BWB vs. BWB. To give one of these players black for the third time in round four is highly undesirable, justifying a switch limit of 200 points.

29E5c. Evaluating transpositions.

All transpositions should be evaluated based on the smaller of the two rating differences involved. For example:

2000 WB vs. 1800 WB

1980 BW vs. 1500 BW

These would be correct third-round pairings were it not for the color problems. Unless a switch is made, there will be a color conflict on each board.

To trade the 1800 for the 1500 is apparently a 300-point switch, which would violate 29E5a, The 80-point rule. But this is not really the case. The same pairings may be achieved by trading the 2000 for the 1980, only a 20-point switch. However, when manipulating pairing cards the actual interchange takes place by switching the cards in the lower half of the score group.

The resulting pairings, 2000 white vs. 1500 and 1800 white vs. 1980, are considered to require only a 20-point switch and thus satisfy the 80-point rule.

In larger groups, the situation is sometimes more complicated, as a permissible transposition may generate numerous additional transpositions, not all of which satisfy the limits for allowable transpositions. This is especially common when some of the otherwise-desirable pairings are impossible because the players have already faced each other.

In such situations, the director may strictly observe the limits for transpositions or may be flexible. If colors in the group are substantially improved, it is acceptable for the limits to be exceeded somewhat.

See also 29E5a, The 80-point rule; 29E5b, The 200-point rule; 29E5d, Evaluating interchanges; 29E5e, Comparing transpositions to interchanges; and 29E7, Examples of transpositions and interchanges.

29E5d. Evaluating interchanges.

For an interchange, the director need only consider one rating difference rather than the smaller of two. The difference between the two players switched is the relevant difference; there is no need to look at the other switch that would produce the same pairings.

While interchanges are theoretically acceptable if the rating difference of the switch is within the limits set forth in by 29E5a, The 80-point rule, and 29E5b, The 200-point rule, interchanges do violate basic principle 27A3, Upper half vs. lower half, and so tend to catch players by surprise, causing them to express their concerns. While interchanges are sometimes necessary, they should not be used if adequate transpositions are possible. See also 29E5d, Evaluating interchanges; 29E5e, Comparing transpositions to interchanges; and 29E7, Examples of transpositions and interchanges.

TD TIP: Experienced directors have observed that players in contention for prizes tend to express their concern about interchanges more often than players not in contention for prizes.

29E5e. Comparing transpositions to interchanges.

A transposition that satisfies 29E5a, The 80-point rule, should be preferred to any interchange, provided it is at least as effective in minimizing color conflicts.

If pairing a round in which 29E5b, The 200-point rule, is used because, for instance, many players have had more blacks than whites, an interchange involving a smaller rating switch than a transposition should be preferred to the latter unless the transposition satisfies the 80-point rule.

Example 1:

2050 WBW vs. 1850 WBW
1870 BWB vs. 1780 BWB

These fourth-round *natural pairings* should be switched to improve color allocation. The interchange of trading the 1870 with the 1850 is only a 20-point switch, while the transposition of switching the 1850 with the 1780 is a 70-point change, the smaller number of 70 (1850–1780=70) and 180 (2050–1870=180). However, since the interchange is only a 20-point switch while the transposition, which meets the requirement of 29E5a, The 80-point rule, is a 70-point change, use of the interchange is not necessary, and the pairings should be 1780-2050 and 1870-1850.

Example 2:

2050 WBW vs. 1850 WBW
1870 BWB vs. 1750 BWB

This is almost the same situation as in Example 1, except the bottom player of the group (1750) is now rated 30 points lower. In this case, transposing the 1850 with the 1750 would be a 100-point switch. This is allowed, as we are trying to avoid assigning two more blacks than whites to someone on board two, so 29E5b, The 200-point rule, applies. But even though it is permitted, it does not meet the requirement of 29E5a, The 80-point rule, and thus does not have priority over an interchange.

The interchange of switching 1870 and 1850, a 20-point switch, is preferred, and the pairings should be 1870-2050 and 1750-1850.

29E5f. Colors in a series.

No player shall be assigned the same color three times in a row, unless there is no other reasonable way to pair the score group or unless necessary to equalize colors.

Variation 29E5f1. Last-round exception.

Except for the last round, when it may be necessary to pair the tournament or class leaders, players shall not be assigned the same color in three successive rounds. **See also** 27A, Basic Swiss system rules; 27A3, Upper half vs. lower half; 27A4, Equalizing colors; 27A5, Alternating colors; 29E, Color allocation; 29E3, Due colors in succeeding rounds; 29E4, Equalization, alternation, and priority of color; 29E4c, Priority based on lot; 29I, Class pairings; and 29M, Recommendations.

29E5g. Unrateds and color switches.

If a player is switched to or from an unrated opponent to improve color allocation, this is not in violation of the 80 or 200-point rules for transpositions and interchanges.

Variation 29E5h. Priority of equalization over ratings.

Equalization of colors has priority over rating differences; 29E5a, The 80-point rule, and 29E5b, The 200-point rule, do not apply.

***TD TIP:** This variation has been more successful at club and local events than at large state or national tournaments.*

29E6. Color adjustment technique.

The order in which pairings are switched to improve colors can make a difference, both in the final pairings and in the time it takes to arrive at them. Two methods that have been commonly used are the *Look Ahead* method and the *Top Down* method. The *Look Ahead* method is more accurate and easier to use.

***TD TIP:** Directors using pairing programs should consult the software manuals on choosing how to implement the desired method.*

29E6a. The Look Ahead method.

The director counts to see if more than half the group is due for the same color (29E3). If not, he or she starts with the top pairing and works down, correcting as many color conflicts (games in which both players are due for the same color) as possible. Unless there is a problem with 29E5a, The 80-point rule, or 29E5b, The 200-point rule, or too many players have already faced each other (27A1), all colors will balance. **See also** 29E4, Equalization, alternation, and priority of color.

If more than half the group is due for the same color, the objective is to *avoid pairings in which neither player is due for that color*. This will maximize the number of pairings in which both sides receive their due color.

Note that *neither due for that color* could mean *both players due for the other color*, *both players due no color* (for instance, both players in round two having played no game in round one), or *either player due for the other color while the opponent is due for no color*.

***TD TIP:** In a score group that has color assignment problems such as those described here, it is best to avoid pairings where neither player is due for the color that is causing a color-assignment problem in a score group. The*

best use for each of those players would be to pair them using 29E5a, The 80-point rule, and 29E5b, The 200-point rule, against players that must play a particular color based on rules like 29E, Color allocation, and 29E4, Equalization, alternation, and priority of color.

A player may be due based only on alternation while most in the group are due based on equalization. For example, if pairing round four and most in the score group have had two blacks, a player with one of each color and an unplayed game is due for neither color based on equalization. Alternation is not an issue, as equalization has priority (29E4), so the player is due for neither color.

Assume most players in a group are due for white. The director examines the *natural pairings*. Any pair of players who have already faced each other are changed (27A1) by the switch involving the minimum rating change described in 29E5a, The 80-point rule, and 29E5b, The 200-point rule, while also avoiding pairings in which neither player is due for white.

The tentative pairings are checked for games in which neither player is due for white (or could be assigned either color). If there are none, the pairings are final. If such pairings exist, as many of such pairings as possible are changed by making switches to higher or lower boards, involving the minimum possible rating differences.

Color conflicts are now minimized and pairings stand. While no direct attempt was made to avoid pairings of both players due for white, these were held to a minimum. **See also 29E7, Examples of transpositions and interchanges.**

Variation 29E6b. The Top Down method.

Using this method, the director, after adjusting to avoid pairing players who have already played (27A1), first considers the color situation on board one of the score group, the board involving the top-rated player in the group. If both players are due for the same color, the pairing is changed by moving up the highest-rated player in the lower half whose color fits, and exchanging that player with the one in the pairing on board one from the lower half, providing the pairing does not violate 29E5a (80-point rule) or 29E5b (200-point rule).

The director then moves down to board two, then board three, etc., correcting any color conflicts encountered in the same manner.

Eventually, the number of color conflicts should be the same as in the *Look Ahead* method. But the pairings are often inferior, and time may be wasted making adjustments that do not reduce the number of color conflicts. **See also 29E7, Examples of transpositions and interchanges.**

29E7. Examples of transpositions and interchanges.

For definitions of the terms *transpositions* and *interchanges* see 29E5, Colors vs. ratings. In each case, we start by looking at what the pairings would be were there no color problems. (See Example 1 on next page.)

Example 1:

2300 BWB vs. 2040 BWB
 2220 BWB vs. 1990 WBW
 2180 BBW vs. 1980 WBW
 2050 BWB vs. 1950 WBW

Using the *Look Ahead* method, the director finds five players due for white, three due for black. Thus, pairings in which neither player is due for white should be avoided. But there are no such pairings, so the above pairings stand. Note that the 2180 is due for white because equalization has priority over alternation (29E3).

The *Top Down* method runs into real problems here. First, the director *corrects* the colors on board one and pairs 2300 vs. 1990. Then, he or she does likewise on boards two and three, resulting in 2220 vs. 1980 and 2180 vs. 1950. This leaves a bizarre pairing on board four: 2050 vs. 2040. When the director is asked why two players with ratings so close are playing each other in a group of eight, the response might be *to improve colors*. Let's hope no one will notice that the colors for this strange pairing are wrong, too!

The remaining examples will show only the *Look Ahead* method.

Example 2:

2320 WBWB vs. 1980 WBWB
 2278 BWBW vs. 1951 WBWB
 2212 BWBW vs. 1910 BWBW
 2199 WBWB vs. 1896 BWBW
 2178 WBWB vs. 1800 WBWB

The director's count shows six players out of ten overall due for white. This means pairings in which neither player is due for white should be avoided.

The only pairing in which neither is due for white is 2212 vs. 1910 (both are due black). There are two options for correcting this.

- a. The first possibility is 2320 vs. 1910. This would require a 70-point transposition in the lower half ($1980-1910=70$) or a 108-point transposition in the upper half ($2320-2212=108$), so we count the switch as 70, the smaller number.
- b. The second option for correcting the colors is 1800 vs. 2212. This is a 110-point transposition in the lower half ($1910-1800=110$) but only a 34-point transposition in the upper half ($2212-2178=34$), and so is preferable to option a.

The resulting pairings:

| White | Black |
|-------|-------|
| 2320 | 1980 |
| 1951 | 2278 |
| 1800 | 2212 |
| 2199 | 1896 |
| 2178 | 1910 |

Example 3 shows a different way to pair this same score group on the last three boards. This method is not better or worse, just different. It has both advantages and disadvantages, which are explained below. The director should pick either the method in Example 2 or the one in Example 3 and use it consistently throughout the tournament.

Example 3:

2320 WBWB vs. 1980 WBWB
 2278 BWBW vs. 1951 WBWB
 2212 BWBW vs. 1910 BWBW
 2199 WBWB vs. 1896 BWBW
 2178 WBWB vs. 1800 WBWB

The director's count shows six players out of ten overall due for white. This means pairings in which neither player is due for white should be avoided.

The only pairing in which neither is due for white is 2212 vs. 1910 (both are due black). There are two options for correcting this.

- c. The first possibility is 2320 vs. 1910. This would require a 70-point transposition in the lower half ($1980-1910=70$) or a 108-point transposition in the upper half ($2320-2212=108$), so we count the switch as 70, the smaller number.
- d. The second option for correcting the colors is 1800 vs. 2212. This is a 110-point transposition in the lower half ($1910-1800=110$) but only a 34-point transposition in the upper half ($2212-2178=34$), and so is preferable to option c.

When transposing the 1910 and the 1800, though, there is an intermediate player, 1896. While it is not incorrect to simply swap the 1910 and the 1800 and leave the 1896 undisturbed, it is considered more correct to do a three-way swap, as follows: the 1800 moves up two boards, the 1910 shifts down one, and the 1896 shifts down one. In this way, an additional player moves down a board, but the ratings change of each of the downward moves is not as large.

The resulting pairings:

| White | Black |
|-------|-------|
| 2320 | 1980 |
| 1951 | 2278 |
| 1800 | 2212 |
| 2199 | 1910 |
| 2178 | 1896 |

Example 4:

| | |
|--------|--------------|
| 2210 B | vs. 1900 B |
| 2200 B | vs. 1830 B |
| 2150 W | vs. 1820 W |
| 2120 B | vs. 1790 B |
| 2080 B | vs. 1500 B |
| 1920 W | vs. 1350 bye |

Eight players are due for white, three for black, and one for neither, so pairings in which neither player is due for white should be corrected. We can quickly see that 2150 vs. 1820 and 1920 vs. 1350 are the problems. The 1350 player who received a bye in the first round is considered not due for white.

Switching (transposing) 1820 up a board is a 10-point change ($1830-1820=10$) on one side, 50 points ($2200-2150=50$) on the other. The lower number is used, so it is a 10-point transposition. Moving 1820 down a board is a 30-point transposition on both sides ($2150-2120$ or $1820-1790=30$). The 10-point change is selected and board two and three pairings are switched.

The two bottom boards may be paired as 2080 vs. 1350 and 1500 vs. 1920. The smaller of the two switches is 150 points ($1500-1350=150$), permissible under the 200-point rule to avoid two extra blacks for a player on the fifth board (29E5b).

However, there is a better way. An interchange between 1920 and 1900 also corrects the colors, and is a switch of just 20 points ($1920-1900=20$). An interchange has priority if it involves a smaller switch than a transposition, and the transposition requires a switch of over 80 points (29E5a).

The resulting pairings:

| White | Black |
|-------|-------|
| 2210 | 1920 |
| 2200 | 1820 |
| 1830 | 2150 |
| 2120 | 1790 |
| 2080 | 1500 |
| 1900 | 1350 |

Example 5:

2100 BWB (3 points) vs. 2080 BWB (3 points)
 1990 WBW (3 points) vs. 2050 WBW (2.5 points)
 1980 BWB (2.5 points) vs. 1800 BWB (2.5 points)

Here, an odd player must drop from the 3 point group to the 2.5 point group. The two groups combined will have three pairings, and giving someone three blacks out of four games unfortunately cannot be avoided.

The natural pairings shown above, dropping the low 3 (1990) to face the high 2.5 (2050), are highly undesirable, leaving the colors wrong in all three games.

One way to improve colors would be to switch the 2050 with the second highest 2.5, the 1980. This would be a switch of 70 ($2050-1980=70$) or 190 ($1990-1800=190$), which counts as 70.

The alternative would be to switch the 2080 and the 1990 in the 3-point group. This would be 90 ($2080-1990=90$) or 50 ($2100-2050=50$), counting as 50, and thus slightly preferable.

The resulting pairings:

| White | Black |
|-------|-------|
| 2100 | 1990 |
| 2080 | 2050 |
| 1980 | 1800 |

TD TIP: *All of this is done automatically when the director uses a computer pairing program that is set up properly; however, the director is still ultimately responsible for the pairings and should make it a practice to review the final pairings made by any program.*

29E8. Variation (unannounced) team pairings take precedence over color equalization.

In a combined swiss individual and team tournament, the need to avoid pairing players from the same team shall take precedence over the need to equalize colors.

29F. Last-round pairings with unfinished games.

Every reasonable effort should be made to have all games finished before pairing the last round. If this would unduly delay the start of the last round and inconvenience a large number of people, then last-round pairings can be made and the round begun. In this case, the director must be very watchful of the unfinished games to prevent the results from being arranged to affect the prizes. **See also** [18F, Problems of the next-to-last round](#) and [28Q, Pairing unfinished games](#).

TD TIP: *Unless there is an extraordinary problem, games with sudden-death time controls have no problems with unfinished games by the time the last round needs to be paired.*

29G. Re-pairing a round.**29G1. Round about to start.**

If a player withdraws without proper notice as the pairings are nearing completion, the director must decide whether time permits a complete revision of the pairings, the most desirable solution.

If time does not allow this, one solution is to *ladder down* the pairings. For example, if a player with 2 points withdraws, the opponent faces a player with 1.5 points, that player's opponent faces a player with 1 point, and so on down until a bye is assigned or the original bye is paired.

In doing this, the director should attempt to find opponents within the same rating range and due for the same color. If the original pairings included any odd players, their pairings may be useful to change. For instance, if a player with 2 points withdraws and another 2 was paired against a 1.5, the opponent of the withdrawn player may be paired against the odd player with 2, leaving a 1.5 to be *laddered down* rather than a 2.

The use of an appropriately-rated house player should be considered as an alternative to re-pairing.

If a computer pairing program is used, the round can usually be properly re-paired without significant delay, avoiding need for *laddering* or a house player.

29G2. Round already started.

The director has the right to make changes in the pairings, if necessary, to correct errors or to handle sudden withdrawals, but it is recommended that no game be canceled in which Black's fourth move has been determined.

29G3. Selective re-pairing.

If some games have started and others have not, it is often possible to correct the problem satisfactorily by telling those who have started to continue and the others to wait and re-pairing those waiting as a separate group, using normal methods.

29H. Unreported results.

Occasionally, both players fail to report the result of their game. The result once learned by the director, counts for rating purposes. The result (except for [29H3](#)) may also be counted for prize purposes at the director's discretion if it is reported in a timely manner. The director's decision should be based on how much earlier in the tournament the unreported result occurred and how many pairings were affected. **See also** [15H, Reporting of results](#); and [15I, Results reported incorrectly](#).

TD TIP: See also the TD TIP for rule [15I](#) for further guidance in dealing with unreported and incorrectly reported results.

In a Swiss tournament, if it is time to pair the next round and a result is still unreported, the director has several options and should choose the one that offers the greatest equity:

29H1. Ejection.

One or both players may be ejected from the tournament. This is appropriate only if there have been prior non-reporting problems with the player(s) involved.

29H2. Double forfeit of next round.

Both players may be removed from the following round pairings, and forfeited for that round.

29H3. Double forfeit of unreported game.

Both players may be scored and paired as losses. The real result, when learned, may be recorded as an *extra rated game* ([28M4](#)).

29H4. Half-point byes next round.

Both players may be removed from the following round pairings and given half-point byes for that round, assuming that half-point byes are available in the event for that round.

29H5. Guess the winner.

If there is a great rating difference in the unreported game, the director may pair the higher-rated player as a win and the lower-rated as a loss. Such a *guess* is usually right, as not only is an upset statistically unlikely, but players scoring upsets rarely neglect to report results, while those defeating opponents rated well below them tend to have a higher *non-reporting rate* than average. The TD may have seen the game in progress, and therefore have an idea of who was winning. **See also** [29H9, Results reported after pairings done](#).

29H6. Pair as a win and a draw.

A variation of [29H5](#) is to pair the higher player as a win and the lower as a draw. This has the advantage of penalizing someone for non-reporting but also guarantees a wrong pairing (the penalty is being paired in a higher score group). If the director is not sure whether [29H5](#) or [29H7](#) is the better option, this may be an appropriate compromise. **See also** [29H9, Results reported after pairings done](#).

29H7. Pair as a double win.

The director may pair both players as having won. This has the advantage of generally penalizing the loser, or both players if the game was drawn, with a harder pairing. The disadvantage is that when the loser is paired a full point up in the next round, this may reward the opponent in that round with an inappropriately easy pairing. **See also** [29H9, Results reported after pairings done](#).

This option is more appropriate in a class tournament than one involving mixed classes in the same section; it also works better with even or minus scores than plus scores, and in early rounds rather than late rounds.

29H8. Multiple missing results.

If more than one game is unreported, all players who failed to report may be omitted from the next round pairings, and paired against each other once the results are known. If this method is used, care must be taken not to allow a player with a chance for prizes an unusually easy pairing—in effect a reward for failing to report the result. This method may also be used in combination with other methods.

29H9. Results reported after pairings done.

If the unreported result is reported or discovered after the pairings are posted for the next round, but shortly before the start of that round, and the director used options [29H5](#), [29H6](#), or [29H7](#), it is not generally recommended that the round be delayed by doing all pairings over. However, the director may consider changing some pairings. **See also** [29H10, Computer pairings](#).

- a. If Option [29H5, Guess the winner](#), was used, and the higher player actually lost, the pairings can usually be quickly improved by switching the opponents of the two players who failed to report. Another option, if the director does not fear significant delay, is to re-pair either or both of the two score groups involved.
- b. If Option [29H5, Guess the winner](#), was used, and the game was actually a draw, there may be no simple way to improve the pairings. However, they are probably not that bad (involving just half-point, not full-point, errors), and the director may allow them to stand.
- c. If Option [29H6, Pair as a win and a draw](#), was used, and the higher player actually won or drew, the pairings are even better than in **b**. But if the higher player lost, the situation is similar to **a**, and the director should consider at least transposing the pairings of the two non-reporters.
- d. If Option [29H7, Pair as a double win](#), was used, the pairings generally should not be changed. If this option has caused a serious problem, then it was incorrect to use it. The director facing this dilemma must choose between letting the pairings stand or doing many pairings over and delaying the round.

29H10. Computer pairings.

If a computer makes pairings, delaying the start of the round to correct all the pairings becomes a more viable option, since the computer may be able to do this in a few minutes.

The director of a large tournament should remember that in addition to the time required to re-pair, there may be significant delay if players must leave their boards, find new pairings, go to new boards, and set up again.

29I. Class pairings.

In tournaments with significant class prizes, class pairings may be used in the last round, if announced in advance. This allows prizes to be decided by direct encounters between those competing for them. A major benefit is to avoid games in which a player in contention for a large prize faces a higher-rated opponent who is not, a situation that invites collusion to produce a win for the player in contention.

Class pairings should be used only when it is mathematically impossible for any player in that class to win a place prize that is greater than first in the class. If even one player can win more than first in the class, the system should not be used at all. **See also** [29E5f1, Last round exceptions](#) and [29E4c, Priority based on lot](#).

Class pairings may unfairly affect special prizes, such as top junior or senior, a factor a director may wish to consider.

TD TIP: *This method is not used if a class player is also in contention for a place prize. For example, a 1495 player is in contention for a top prize as well as the “C” prize. If class pairings are used, the 1495 player could be paired against a weaker class “C” opponent instead of the stronger “natural” higher rated opponent, also in contention for a place prize. The “natural” opponent will most likely then be paired against an opponent rated higher than 1495. This unusual pairing may allow the 1495 rated player to win the place prize.*

29I1. Full-class pairings.

The first common method of class pairings simply treats the class as a separate Swiss system tournament, and pairs accordingly. If there is an odd number of players in the class, the bottom player should be paired as normally as

possible outside the class. **See also** [28M1, The house player](#); [29D, The odd player](#); and [29J, Unrateds in class tournaments](#).

29I2. Partial class pairings.

Another system pairs players within a rating class who have a chance for class prizes with each other, and then treats the rest of the field normally. This method can be useful when using a computer program that does not do class pairings, since it can greatly reduce the number of pairings that must be made by hand and entered into the computer.

29J. Unrateds in class tournaments.

In sections or events restricted to players under a specified rating with unrated players also allowed, if there are two or more unrated players with plus scores in the same score group, the director may pair them against each other. This system is most appropriate in events with meaningful cash prizes; it tends to make it more difficult for players to win undeserved prizes. **See also** [28C, Ratings of players](#); [28D, Players without US Chess ratings](#); and [33F, Unrateds](#).

***TD TIP:** Organizers sometimes limit unrated players in class tournaments to their own section with their own prizes. Occasionally unrated players are also given the opportunity to play in the highest section or class with the understanding that they only qualify for the top prizes or a special unrated prize.*

29K. Converting small Swiss to round robin.

A 5-round Swiss with six entries or 3-round Swiss with four entries may be converted to a round robin format. This may be acceptable for a quick one-day tournament, but often works poorly for a two-day or three-day six-player round robin.

Withdrawals are likely to cause many more unplayed games in a round robin than in a Swiss and to distort the results more. The round robin format is also not compatible with late entries or half-point byes. It is true that the Swiss may pair players against each other twice, usually the two leaders in the last round, but most players prefer such a rematch to not playing at all.

29L. Using round robin table in small Swiss.

A better option than [29K, Converting small Swiss to round robin](#), is to maintain an event as a Swiss when there is a small turnout, but to use a round robin pairing table to minimize the possibility of players' facing the same opponents twice.

For instance, if a 5-round Swiss has six players, pair round one as in a normal Swiss. Then assign round robin pairing numbers, which cause the first-round pairings to have been correct for round one of a six-player round robin, using the pairing table in *Chapter 12*. Do not announce that the tournament will be a round robin; it may not be.

As long as there are no dropouts or additions, pair each subsequent round using the round robin table by selecting the round from the table in which the top player in the top score group receives the proper Swiss opponent. Do not use the colors from the table, but assign them according to Swiss rules. If three in a row of the same color is inevitable using a pairing line from the table, there is the option of using the next best line.

***TD TIP:** Here is an example list of six players in a five round Swiss, in Swiss rating order (highest rated through lowest rated), with round robin pairing numbers (generated by the round 1 pairings from table B in Chapter 12: Round Robin Pairing Tables): 1. (2205), 6. (2050), 5. (1803), 2. (1650), 3. (1493), 4. (1402). The pairings for round one: 1. (2205) vs. 2. (1650), 3. (1493) vs. 6. (2050), 5. (1803) vs. 4. (1402). Notice that the pairings are Swiss pairings using the pairings numbers from round 1 located in the round robin pairings table B in Chapter 12.*

If everyone completes the tournament, it will in effect be a round robin, but if there are dropouts or late entries it is possible to switch to Swiss methods at any time. For instance, in the last round if only four players are still in the

tournament, use Swiss methods and pair them against each other even if one or both encounters are rematches. This is far better than sticking to round robin pairings and awarding two byes.

The above method may also be used with slightly more players to avoid rematches. For instance, it may be appropriate in a four-round Swiss with five or six players, a five-round Swiss with six to eight players, a six-round Swiss with seven to ten players, a seven-round Swiss with eight to twelve players, or an eight-round Swiss with nine to fourteen players.

Note that in such small Swisses it is especially important to recruit an appropriately rated permanent house player (28M1) if possible, since otherwise byes will have a more harmful effect than in a larger Swiss. Repeated announcements among spectators offering free entry to such a house player are warranted, with the condition that such a player will be paired only when there would otherwise be an odd number. It is even possible to allow such a house player to be eligible for prizes in the event he or she plays sufficient games to be in contention.

TD TIP: Some directors may find 29L1, *Variation: 1 vs. 2 pairings*, easier to administer than using this combination of round robin and Swiss systems when faced with a small number of players that almost matches the number of rounds in a tournament, especially if the event is longer than one day.

Variation 29L1. 1 vs. 2 pairings.

This pairing system is exactly the same as the Swiss pairing system except that the players in the upper half do not play the players in the lower half in the first or any other round. Instead, in round 1 after the players have been ranked, each odd ranked player is paired with the even ranked player following them on the ordered ranking list; i.e.; 1 vs. 2, 3 vs. 4, 5 vs. 6, etc. In all other rounds the players are ranked in rating order within their respective score groups and paired in groups of two starting with the two top-rated players in the top score group. Odd players should be paired to the player in the next lower score group who closest matches with them in rating, using normal color priorities. Color allocation, transposition, avoiding players meeting twice, byes, late entries, and withdrawals are applied exactly the same way as in a Swiss event.

TD TIP: Because it handles withdrawals and late entries as easily as the Swiss system, this 1 vs. 2 pairing system is easier, for some directors, to administer than 29L. Using round robin table in small Swiss, in events with the number of players almost equal to the number of rounds; however, the 1 vs. 2 pairings system can accommodate many players in any size tournament. This system has seen some popularity at the club and local level. It is a hybrid of the traditional club “ladder” system (where one player challenges another player for their spot on the ladder) and the Swiss System.

29M. Recommendations.

Some disparity in color allocation is inevitable in the Swiss system, as score has priority over color. Tournaments with an even number of rounds cause the most problems, because when a disparity exists, it is larger. Tournaments with an odd number of rounds are therefore apt to keep more players happy, and are easier to pair because it is easier to maintain the expected 3-2 or 4-3 color allocations. **See also** 27A4, *Equalizing colors*; 27A5, *Alternating colors*; 28J, *The first round*; 29E, *Color allocation*; 29E2, *First round colors*; 29E3, *Due colors in succeeding rounds*; 29E4, *Equalization, alternation, and priority of color*; and 29E5, *Colors vs. ratings*.

30. The Round Robin Tournament

30A. Description.

This tournament format is also known as *all-play-all*. Formerly the almost-exclusive format for chess competitions, the round robin is most often used now for important events where time is not a factor, club events with one game per week, and one-day four-player events known as *quads*.

Although it is the fairest-known tournament format when there are no withdrawals, it cannot accommodate many players, and so is used much less than the Swiss system. A round robin tournament is easy to pair. Players are assigned numbers by lot, and the pairings are read from Crenshaw tables, Chapter 12.

30B. Scoring.

Scoring is the usual one/one-half/zero, except that players who withdraw before playing half their scheduled games shall be scored as not having competed at all. Their completed games must still be rated, but they are not considered part of their opponents' records for prize purposes.

30C. Withdrawals.

Dropouts cause major problems in round robins. In special invitationals they may be held to a tolerable level, but in open weekend tournaments and weekly club events serious problems are common. Unlike the Swiss, in which a forfeit affects at most one game, a dropout may generate numerous inequities in a round robin, whether notice is given or not.

30D. Penalties for withdrawals.

Players who withdraw without sufficient reason or who repeatedly withdraw from round robins may be denied entry in future such events, or may be charged a special deposit, which will be refunded upon completion of all games. The latter is in addition to any deposit the organizer may choose to require of all players in an effort to minimize withdrawals.

30E. Effect of withdrawals on colors.

If there is a withdrawal, the Crenshaw-Berger system provides tables for adjustments to equalize colors. **See also** [Round Robin Pairing Tables](#).

30F. Double round robins.

In double round robins, each player or team plays each of the others twice, the second time reversing the original color assignment.

30G. Quads.

Quadrangular tournaments divide the entrants into groups of four in rating order. The four highest-rated players form the first group, etc. These players then play three-game round robins following the Crenshaw tables. **See also** [Chapter 12 Round Robin Pairing Tables](#).

When the total number of entries is not divisible by four, the director may create a 3-round Swiss among the lowest five to seven players. This works well with a field of six, but not with five or seven since a large percentage of the field will receive a bye. The simplest method of evening the field is to seek another player. If more than one player appears, the late players should be informed that only an odd number prepared to enter immediately will be accepted.

A five-player section may be held as a round robin if all players agree. Players should be warned that this may take much longer since each player will have four opponents and a sit-out. This format is most appropriate with lower-rated players.

The preferred pairing table for quads is as follows: (Players' numbers are assigned in order of rating, not randomly as in larger round robins.)

Round one: 1–4, 2–3; round two: 3–1, 4–2; round three: 1–2, 3–4 (colors by toss in this round)

***TD TIP:** Some TDs prefer to randomly assign pairing numbers by lot for Quads.*

30H. Holland system.

The Holland system uses round robin preliminaries to qualify players for finals, which are usually also round robins. There is no standard format, but a typical one might be to divide players into groups of similar strength of about eight to twelve players each, with the winner or top two in each prelim qualifying for the championship finals and others possibly for lower finals.

The Holland system, once the standard U.S. tournament format, was surpassed by the more flexible Swiss system in the 1940s and is used today largely for Blitz (G/5) tournaments, in which the lack of delay for pairings is especially advantageous.

30I. Unbalanced Holland.

A Holland variant used successfully in Blitz events places the top-rated players in the first preliminary section, the next highest rated in the second, etc., rather than balancing the strength of the sections. Prizes are awarded for each prelim, and all plus scores in the first prelim qualify for the finals, along with the top two players from the second prelim and the winners of each other prelim.

31. Team Chess

Many varieties of team chess exist in the U.S. Different leagues, inter-club events, and tournaments have somewhat different rules. The concern here is principally for team tournaments, but the points made may have wider applicability. Except for [31A, Combined individual-team tournaments](#), all comments apply to events with team vs. team pairings.

TD TIP: *Directors are advised to have a team captains meeting before the first round to make sure the special variations on the particular style of team chess for any one event are well understood by the teams involved.*

31A. Combined individual-team tournaments.

As the name suggests, these are not true team tournaments. They are particularly popular as scholastic events because they allow schools to enter any number of players instead of a team with a fixed roster. The tournament is played as a normal Swiss, except that efforts are made to avoid pairing teammates (i.e., players from the same school) with each other. **See also** [28A, Pairing cards or program](#) and [28N, Combined individual-team tournaments](#).

TD TIP: *No large combined individual-team tournament is paired by hand any longer. The amount of detailed paperwork plus keeping track of team members for reports and pairings along with calculating team and individual tiebreaks makes this style of tournament an ideal candidate for pairing by computer.*

31A1 The Rollins (Military) Scoring system for combined events. This system offers a means to determine team and individual champions from a single event (usually a Swiss). The individual champion is determined using the normal rules and announced tie-breaks for the event. The number of eligible team members (for example, 4, 5 or 6) is determined as announced in the event promotion. Eligible teams are then selected by identifying the respective highest scoring players for each team. Based on the total number of players, each player receives a score that is the inverse of his overall placing. Example: The top player in a 100 player event receives 99 points, second place receives 98 points, etc. Individual scores for eligible team members are then combined to derive the team score. The highest team score is declared the Team Champion.

TD TIP: *This method is especially useful for Swiss tournaments where the number of teams is small and the total number of participants is large. See rule [28N](#), and the Scholastic regulations, for the typical scoring method used at individual/team tournaments.*

A WORKING MODEL The following scoring happens in a fictional tournament that is a 6 round Swiss event consisting of 100 players and four teams. In this example, the Top Individual player (determined from the 6 round Swiss tournament) was from the Army and the Army won the Team Championship as well (determined from the standings from the individual tournament). (See table on next page)

| | Army Team | Points | Navy Team | Points | Air Force Team | Points | Marine Team | Points |
|--------------------|-----------|------------|-----------|------------|------------------|------------|-------------|------------|
| Player 1 | 1st | 99 | 3rd | 97 | 2 nd | 98 | 4th | 96 |
| Player 2 | 5th | 95 | 7th | 93 | 8 th | 92 | 10th | 90 |
| Player 3 | 6th | 94 | 9th | 91 | 11 th | 89 | 12th | 88 |
| Player 4 | 13th | 87 | 14th | 86 | 16 th | 84 | 15th | 85 |
| Player 5 | 17th | 83 | 18th | 82 | 22 nd | 78 | 23rd | 77 |
| Player 6 | 19th | 81 | 20th | 80 | 21 st | 79 | 24th | 76 |
| Place/Total | | 539 | | 529 | | 520 | | 512 |

Table 31A.1 Rollins System for Combined Events

** This is the official scoring system of the US Armed Forces Open Chess Tournament.*

31B. Player rankings.

Players on a team are ranked according to rating; the higher-rated players play on lower board numbers. Alternates must be lower-rated than regular team members. Unrated players, unless assigned ratings (28D), must play on higher-numbered boards than rated players.

TD TIP: *The lowest board number is 1 (first position where the highest rated player is seated). This can be confusing since the top players play on this board.*

If a player is missing from the lineup, lower-rated teammates must move up to preserve the order by rating, so that if a team forfeits games, they are always on the last (highest-numbered, lowest-rated) boards. Board assignments must always be made as described in the preceding paragraph.

TD TIP: *Players missing from a team lineup require special care. The director can announce that individual team members should not start play unless all team members for both teams are present. After a very short time, announced by the director, all players missing from the lineup must be replaced by lower-rated teammates as outlined in 31B or any announced and posted variations of 31B. The individual games may then begin.*

A variation on this technique is used in round one, which presents special problems regarding players missing from the lineup. Travel is known to delay a player's arrival. Some directors, if they are confident that the player will arrive in time to complete a game, allow play to start in round one with a player missing from the lineup without enforcing 31B. Those directors often check with site officials, such as the hotel staff, to see if the player has arrived before making this ruling; however, this technique can backfire. For a lot of reasons the missing player may not show up at all. What the director rules at this point has an effect on team match points and team tiebreak points.

Ruling one: The team with the missing player forfeits that board and all boards below it. The actual game result is reported to US Chess for rating purposes but scored as forfeit losses for the team event. This method has a negative impact on the calculation of future tiebreak points.

Ruling two: The team with the missing player forfeits only the missing board. In all future rounds 31B will apply to the team with the missing player. This lessens the negative impact on future calculations of tiebreak points; however, it may cause the team with a full team roster to actually lose the round one match.

Since either ruling directly affects the team with the full roster of players, some directors allow that team to choose which ruling they prefer. Other directors may allow that team to decide before play starts if they prefer the enforcement of 31B or one of the two rulings just outlined here.

31B1. Board prizes.

If individual board prizes are offered, players who play on more than one board are eligible only for the lowest board played. The player's points on all boards combined are credited toward the board prize on the lowest board.

***TD TIP:** If a player plays in positions 1 and 4, the player's combined points would be credited toward the board prize for position 4.*

Variation 31B2. Placement of unrated players in team lineup.

An unrated player may play on any board.

31C. Team ratings.

Teams are ranked in order of the average of individual ratings of the rated regulars, not alternates. Unrated players (28D) do not affect their team's average rating.

Variation 31C1. Unrateds and team ratings.

In calculating the average team rating, an unrated on board four is assigned 50 points below the rating of board three. An unrated on board three is assigned the average of the board two and four ratings. An unrated on board two is assigned the average of the board one and three ratings. An unrated on board one is assigned 50 points above the rating of board two. This system and 31B1 have been used at the Pan-American Intercollegiate.

***TD TIP:** Pairing software can calculate a team's average rating automatically.*

31D. Pairing cards.

Team tournaments use pairing cards similar to those used in individual tournaments, except that there is space to note both match scores and game points. Ideally, a larger pairing card, such as one measuring five-by-eight inches, should be used. These are available from US Chess office.

The front of the pairing card should contain the team name, the team average rating, the round-by-round results of the team, the colors of the team, and the team's opponents. The reverse side should contain the names of the players, their ratings, their US Chess identification numbers, and the name of the team captain, as well as any information about fees and dues paid.

***TD TIP:** Pairing software can take care of these tasks automatically.*

31E. Pairing rules.

Swiss team events should be paired in the same manner as individual events. Teams are grouped by their match points and then ranked within the group by their ratings. Rules governing color allocations apply to the color received by board one. If the first board receives white, for example, so do all teammates on odd-numbered boards, while his or her even-numbered teammates play black. Byes, defaults, lateness, and so forth are treated as in individual tournaments. Scoring is based on match points, without regard to the margin of victory.

In each match of a team tournament, a full match point (1.0) is awarded to the team with the greater game point total, while the opposing team receives no match points (0.0). If the two teams' game point totals are the same, each team receives half a match point (0.5).

***TD TIP:** Typically to win a match point a team's game point total must be at least one-half point more than the opposing team's game point total for that round (to draw the match both teams' game point totals are the same); i.e., the team with the largest total team game score wins the match or if the team game scores are equal draws the match. In the case of a double forfeit on one or more boards, it is possible for a team to win or draw the match even though its game point total seems insufficient to typically win or draw. For example, with 4-player teams, neither team's 4th board shows up. Team A wins on boards 1 and 2 (two game points) while team B wins on board 3 (one game point). Team A wins the match (and scores 1.0 match point) even though its game score is only 2.0 (typically only enough to draw a 4 board team match). Or, if the games on boards 1 through 3 are all draws, and board 4 is a double forfeit, then teams A and B each draw the match (0.5 match points) even though each team's game score is only 1.5 (typically not enough to draw or win a 4 board team match).*

The director or organizer should announce in advance any variation on this procedure, including the minimum number of players (other than a full team) required to be present for a team to be paired or the minimum number of game points required for a team to win or draw a match.

One example variation: in each match of a team tournament, a full match point (1.0) is awarded to the team with the greater game point total only if that game point total is greater than half the available game points for the match; e.g., a team's game point total must be at least 2.5 in a team tournament with four-board teams in order to win. If a team scores exactly half the available game points, then the team receives half a match point (0.5); e.g., a team's game point total must be at least 2.0 in a team tournament with four-board teams in order to draw the match. If a team scores fewer than half the available match points for the match that team receives no game points (0.0); e.g., a team with a game point total equal to or less than 1.5 in a team tournament with four-board teams cannot score a match point.

Under this variation, if two teams with only three players each meet in a four-board match, a game score of 2-1 would lead to one team drawing the match (0.5 match point) and the other team losing the match (0.0 match point), while a game score of 1.5-1.5 would lead to both teams losing the match (0.0 match point).

Note that colors are less important for teams with an even number of boards than they are in an individual tournament, since half the team will have each color in every round.

Variation 31E1. Game point scoring.

Scoring and pairings may be done by game points rather than match points, or by a combination of the two (match points first, then game points if tied).

TD TIP: *This is an ideal task for properly set pairing software.*

31F. Wall charts.

Swiss team events are unique in that two sets of wall charts are needed: team charts to display team results and individual charts for individual results. The latter, in addition to being informative, are needed for tiebreak and rating purposes.

The individual charts are set up by team so that the highest-average-rated team's players would appear as numbers 1, 2, 3, 4, etc., the second-highest-rated team's players next, and so on down to the lowest-rated team's players. Note that a player on a lower-rated team could have the highest individual rating in the tournament but still be placed far down on the wall charts.

A form that combines individual and team entries on a single wall chart is also possible, as is the use of a separate individual wall chart for each board.

31G. Team captain.

The role of the team captain is:

31G1. Registration.

To register the team with all appropriate information.

31G2. Arrival.

To see that the team arrives on time for each match.

31G3. Lineup.

To see that the team plays the correct opponent, in the correct board order, with the correct colors.

31G4. Draw consequences.

To advise the players, if asked, what the likely consequences of a draw would be for the team, and to respond to such a request without looking at the game of the player making the request.

31G4a. Captain may not impose results.

Each player alone is responsible for the result of his or her own game. The team captain may not impose results upon team members.

31G5. Reporting result.

To report the result of the match to the tournament director in the manner required.

31G6. Wall charts.

To check the wall charts for accuracy and to report any discrepancies to the director.

32. Prizes**32A. Announcement.**

Prizes to be awarded and the methods used to allocate them must be announced in pre-tournament publicity if they vary from the standards below. In all cases, these guidelines apply equally to individuals or teams. **See also** [23A1, Obligation to pay guaranteed prizes](#).

32B. Distribution.**32B1. One cash prize per player.**

No winner shall receive more than one cash award. The award may be one full cash prize if a clear winner, or parts of two or more cash prizes if tied with others. Prizes such as *biggest upset*, *best game*, or *brilliancy* are standard exceptions from this rule. Any other special prizes should be announced and designated as such. A clear winner of more than one cash prize must be awarded the most valuable prize. For examples see [32B5, Offering a choice of prizes](#).

32B2. Ties.

Tied winners of place prizes or tied winners in the same class of class prizes shall be awarded all the cash prizes involved, summed and divided equally; but no more than one cash prize shall go into the division for each winner. For examples see [32B5, Offering a choice of prizes](#).

32B3. Ties for more than one prize.

If winners of different prizes tie with each other, all the cash prizes involved shall be summed and divided equally among the tied winners unless any of the winners would receive more money by winning or dividing only a particular prize for which others in the tie are ineligible. No player may receive an amount greater from the division of those prizes than the largest prize for which he would be eligible if there were no tie. No more than one cash prize shall go into the pool for each winner. **For examples** see [32B5, Offering a choice of prizes](#).

***TD TIP:** The number of prizes in the pool to be split may not exceed the number of players in the tie.*

32B4. Priority of identical prizes.

A player who is eligible for both a place prize and a class prize of an identical amount shall receive the place prize. A player who is eligible for more than one class prize of an identical amount shall receive the prize for the highest class involved. A player who is eligible for prizes of identical amounts, with one being a rating-based class prize and the other being a prize for juniors, seniors, etc., shall receive the rating-based class prize. For examples see [32B5, Offering a choice of prizes](#).

32B5. Offering a choice of prizes.

No player shall ever be offered a choice of which cash prize to accept, as this would allow that player to determine which prizes are available to be awarded to others. (See examples on next page)

Example 1:

1st prize = \$200

2nd prize = \$100

3rd prize = \$75

Players 1 and 2 tie for 1st and 2nd with 4.5-0.5, players 3, 4, and 5 score 4-1. No other player has more than 3.5 points.

Players 1 and 2 win \$150 each (equal shares of 1st and 2nd).

Players 3, 4, and 5 win \$25 each (equal shares of 3rd).

Example 2:

1st prize = \$400

2nd prize = \$200

A prize = \$100

B prize = \$50

Players 1, 2, 3 (Masters) score 5-0, players 4 (an Expert), 5 (an A), and 6 (a B) are next with 4-1. No other player has more than 3.5 points.

Players 1, 2, and 3 win \$200 each (equal shares of 1st-2nd).

Player 4 wins no money.

Player 5 wins \$100 (the A prize).

Player 6 wins \$50 (the B prize).

Note: If instead of the A prize of \$100 and B prize of \$50 an *Under 2000* prize of \$100 and *Under 1800* prize of \$50 had been advertised, players 5 and 6 would win \$75 each.

Example 3:

1st prize = \$250

1st A = \$75

2nd prize = \$200

2nd A = \$50

3rd prize = \$150

1st B = \$75

4th prize = \$100

Players 1 and 2 score 5-0. Players 3, 4, 5, 6 score 4.5-0.5, where 4 and 5 are A players and 6 a B player. Player 7 (an A) scores 4-1.

Players 1 and 2 each win \$225 (equal shares of \$250 + \$200).

Players 3, 4, 5, 6 each win \$100 (equal shares of \$150 + \$100 + \$75 + \$75).

Player 7 wins \$50 (second A).

If both monetary and non-monetary prizes are offered, see [33D2](#) and [Variation 33D2a](#) plus the examples following 33D2a.

32C. Payment.

Prizes advertised as guaranteed must be paid promptly and in full. Prize winners may be required to provide ID, social security numbers, tax forms information, etc. before prizes can be issued. Failure to pay guaranteed prizes may result in penalties, including revocation of affiliation or tournament director certification.

32C1. Withdrawals.

Unless the director decides otherwise, players who fail to complete the tournament are not entitled to prizes.

32C2. One player in class.

An announced class prize must be awarded even if only one player in that class completes the schedule, unless otherwise advertised.

32C3. No players in class.

If no player in a class completes the schedule, awarding an advertised prize for that class is not required.

32C4. Based-on prizes.

In tournaments in which prizes are based on entries, if the actual turnout is smaller than the based on turnout, the following rules apply:

32C4a. Proportional payout.

Each prize must be paid at least in proportion to the turnout.

32C4b. 50% minimum.

If the total advertised prize fund is greater than \$500 (all sections combined), at least 50% of each advertised prize must be paid.

32C4c. Multiple-section tournaments.

If separate based-on goals are announced for different sections, then the proportion paid in each section (32C4a) is treated separately. If a common based-on goal is announced for multiple sections, then the proportion paid in these sections is considered together. In either case, 32C4b also applies.

Examples:

1. A tournament advertises \$1,000 in prizes if 100 players enter. Only 30 enter. The organizer is required to pay at least \$500, each prize being at least half the original projection.
2. A tournament advertises \$1,000 in prizes if 100 players enter. Only 70 enter. The organizer is required to pay at least \$700 in prizes, each prize to be at least 70 percent of the amount originally advertised.
3. A tournament advertises \$400 in prizes if 40 players enter. Only 10 players enter. The organizer is required to pay at least \$100 in prizes, each prize to be at least 25% ($10/40 = 25\%$) of the amount originally advertised.

TD TIP: When there are no players eligible for a prize, that prize is simply not awarded. The based-on formula then applies (as it would have been if there were players eligible for all prizes) to the remaining advertised prize money. Directors are not required to redistribute any prize money that players do not qualify for in based-on prize funds; however, be aware that any based-on prize in any tournament that is also a Grand Prix event is subject to review and adjustment by US Chess.

32C5. Reentry prizes.

Unless announced otherwise, reentries (28S) qualify only for prizes calculated by their latest reentry score. **See also** 28S5, Reentry scores and 34H, Reentry tiebreaks.

32C6. Limited Prizes: In general, when a player is allowed to enter a given event or section, that player is eligible for the prizes in that section. However, when a player (e.g. an unrated in a lower section) receives a limited prize, the distribution of the remaining prize is to follow the following priority list.

The total dollar amount of all cash prizes announced or computed by “based on” shall be paid:

1. Within the event.
2. Within the section in which the limit was awarded.
3. Within the prize group (e.g. place, class or under) in which the limit was awarded.
4. Within the point group in which the limit was awarded.

See also 33F Unrateds.

32D. Minimum penalty for violation of 32C4.

The minimum penalty shall be disqualification from advertising in *Chess Life* for one year. Additional penalties may be imposed at the discretion of the Executive Director. If a tournament is affected with extreme adverse events, then the organizer may appeal to US Chess. **See also 21L, Appeal to US Chess.**

Organizers are expected to base their prize funds on estimates of player attendance that can be reasonably achieved. An organizer who repeatedly overestimates tournament attendance may be subject to penalties, at the discretion of US Chess.

32E. Partial guarantees.

Sometimes the overall prize fund is based on entries, but some prize(s), most often first overall, is (are) guaranteed. Organizers should realize that, in such cases, they are guaranteeing more than a proportional payment of prizes, and that if the projected prize fund is more than \$500, they are also guaranteeing more than 50 percent of the projected prize fund under these circumstances.

For example, if projected prizes are \$2,000 based on 60 entries with \$500 guaranteed to first, and 30 players enter, the \$500 first prize must be awarded and the remaining \$1,500 that was projected cannot be lowered below \$750 (as each prize must not be less than half of what was projected). So, the actual total guarantee is \$1,250 (\$500 first place + \$750 minimum based on \$1500 expected payment based on [32C4](#)), not \$1,000.

TD TIP: *The TD should realize that in the unique case of multiple players all finishing the tournament with perfect scores (winning the maximum number of games possible in a tournament), the standard tiebreaking systems would not have the same relevance as they would in outcomes where the players finished with less-than perfect scores, and could have otherwise done better. It is impossible to improve on a perfect score. Therefore, in the special case of more than one player finishing with a perfect score, the TD should make every effort possible to have a playoff among all players with perfect scores, to determine the winner of the event. The playoff does not have to be rated, and the time control can be faster than the time control used for the tournament (but should allow at least five minutes per player). A special playoff to break perfect-score ties does not need to be announced in the tournament publicity, but should be announced to the players at the beginning of the tournament.*

32F. Trophies.

No player should receive more than one individual trophy or plaque, the most desirable to which he or she is entitled. It is recommended that no class, age, or school grade trophy be as desirable as any of the place trophies. A player should not have a choice of trophies, since such a choice would decide which trophies are available to be awarded to others. **See Also 33D1 one non-monetary prize per player.**

32F1. Tiebreaking.

Unless another method has been announced in advance, tiebreaking (see [34, Breaking ties](#)) will be used to resolve ties for trophies.

TD TIP: *One popular announced method is to have a series of speed game playoffs for non-divisible prizes such as trophies. See also 34E12, Speed play-off game(s).*

Variation 32F2. School grade or age trophy and place trophy.

The winner of a school grade or age trophy may also win a place or class trophy. This addresses the common problem of young children who consider any first place better than any lower place regardless of the category. The use of this variation should be posted or announced at the tournament before the first round.

32G. Other non-cash prizes.

No player shall receive more than one non-cash, non-trophy prize, the most valuable to which he or she is entitled. **See Also 33D1 one non-monetary prize per player.**

32G1. Tiebreaking.

Unless another method has been announced in advance, tiebreaking (see [34, Breaking ties](#)) will be used to resolve ties for merchandise, memberships, or free entries, to determine which player wins any title at stake or qualifies to advance into another contest, or for any purpose other than the awarding of money prizes.

***TD TIP:** One popular method is to have a series of speed game playoffs for non-divisible prizes such as trophies. This should be announced in advance. See also [34E12, Speed play-off game\(s\)](#)*

33. Some Notes About Prize Funds

These are recommendations, rather than rules or mandates, but are included since some less-experienced organizers may find them useful.

33A. First prize.

A ratio of about ten to one between first prize and the entry fee is typical for serious tournaments, as opposed to club events or other tournaments organized to provide experience. This ratio should be even greater in an event designed to attract top players.

33B. Place prizes and class prizes.

When there is apt to be a number of players in a rating class competing in an event, it is frequently the case that some sort of class prize is offered. This should be at least as much as the entry fee paid. Generally, place prizes should be higher than class prizes, both to reward the relative excellence of the chess played and to avoid distribution problems.

In major tournaments, the top prizes for classes or rating-based lower sections are often higher than the lower place prizes, but most organizers consider it inappropriate for any class prize or rating-based lower section prize to be as large as the corresponding overall or top section prize.

***TD TIP:** One correct example: 1st = \$1000, 2nd = \$700, 3rd = \$500, Class X = \$400. One problematical example (the class prize equals or exceeds the lowest place prize): 1st = \$1000, 2nd = \$700, 3rd = \$500, Class X = \$600 (or even Class X = \$500).*

33C. Classes.

A common variation on class prizes is the use of *under* prizes for players below a specified rating. There is a difference between a Class A prize and an Under 2000 prize, since only a Class A player may win the former, while a Class A, B, C, D, or E player can qualify for the latter. If a prize is intended for a restricted group, it should be named by the class or by both ratings boundaries, e.g., Class A or 1800-1999.

33D. Non-monetary (indivisible) prizes.

Non-monetary prizes, such as trophies, clocks, medals, and the like are sometimes offered. These are especially popular at scholastic tournaments, where they are offered in place of monetary prizes. In non-scholastic tournaments, these are sometimes offered alone or sometimes with monetary prizes. See Example 4 in [33D2a](#) below, where the A prize is "\$100 + clock."

Indivisible prizes present certain problems because they are, well, indivisible. This often necessitates tie-breaking procedures. See also [34, Breaking Ties](#)

33D1. One non-monetary prize per player.

No winner shall receive more than one non-monetary award. Prizes such as *biggest upset*, *best game*, or *brilliancy* are standard exceptions from this rule. Any other special prizes should be announced and designated as such. A clear winner of more than one non-monetary prize must be awarded the highest-ranked prize (*ranking* is described below).

33D1a. Ranking of prizes.

Ranking prizes becomes important when a player qualifies for more than one non-monetary prize. This often leads to the question of which non-monetary prize should be awarded to the player and which left for someone else. For instance, is second Under 2000 ranked ahead of first Under 1800, or is any first place higher than any second place?

If each of the prizes also has a monetary component, the choice of rankings is easy: The prize with the higher cash award is ranked higher. If monetary components of prizes are equal (e.g., 3rd place, 2nd Under 2000, and 1st Under 1800 each has a \$100 monetary component along with a trophy), the rankings become more difficult. In this situation, it is recommended that all top prizes be ranked first, then all class prizes for the highest class, then all class prizes for the next highest class, etc., but this may be varied. If the rankings are varied from the recommendation, the director should post the actual rankings at the tournament site in advance and include them in pre-tournament publicity if possible. Example: 1st Under 1800 is ranked as a higher prize than 2nd Under 2000.

***TD TIP:** For scholastic tournaments, age- or grade-based prizes are usually considered equivalent to class prizes when determining the rank of a prize.*

33D2. Monetary and non-monetary prizes calculated separately.

If monetary and non-monetary prizes are offered together, such as “\$100 + trophy,” the monetary and non-monetary prizewinners should be calculated separately. In case of ties, monetary prizes should be combined and divided equally, as described in 32B5, while tie-breaking procedures should be used to award non-monetary prizes, as in 33D. No player should receive more than one non-monetary prize, except for the standard exceptions listed in 33D1.

***TD TIP:** As in the TD TIP above, for scholastic tournaments, age- or grade-based prizes are usually considered equivalent to class prizes when determining the rank of a prize.*

Variation 33D2a. Monetary and non-monetary prizes calculated together.

If monetary and non-monetary prizes are offered together, such as “\$100 + trophy,” the non-monetary prize must be awarded to the same person who is awarded the monetary prize, or, if there is a tie for the prize, to the player with the greatest tiebreak points qualifying for the prize. TDs who use this variation should do so consistently and post it at the tournament.

Examples of 33D2 and 33D2a:***Example 1:***

| | |
|-----------------|--------------------------------|
| 1st | \$200 + trophy |
| 2nd | \$100 + trophy |
| 3rd | \$50 + trophy |
| Top A | \$40 + trophy |
| | |
| Player 1 (2250) | 5 points |
| Player 2 (2225) | 4.5 points, 20 tiebreak points |
| Player 3 (1940) | 4.5 points, 18 tiebreak points |
| Player 4 (1865) | 4 points, 16 tiebreak points |
| Player 5 (1990) | 4 points, 14 tiebreak points |

Player 1 gets \$200 and the 1st place trophy.

Player 2 gets \$75 + the 2nd place trophy (\$75 as an equal share of 2nd and 3rd money, plus the 2nd place trophy because 2's tiebreaks are better than 3's).

Player 3 gets \$75 + the 3rd place trophy (\$75 as an equal share of 2nd and 3rd money, plus the 3rd place trophy because 3's tiebreaks are worse than 2's). This assumes that the director has ranked top prizes ahead of class prizes.

Player 4 gets \$20 + the Top A trophy (\$20 as an equal share of the Top A money, plus the Top A trophy because 4's tiebreaks are better than 5's).

Player 5 gets \$20 (\$20 as an equal share of the Top A money; all trophies have been awarded to other players).

Example 2:

| | |
|-----------------|--------------------------------|
| 1st | \$200 + trophy |
| 2nd | \$100 + trophy |
| 3rd | \$50 + trophy |
| Top Under 2200 | \$40 + trophy |
| Top Under 2000 | \$30 + trophy |
| | |
| Player 1 (2250) | 5 points |
| Player 2 (2225) | 4.5 points, 20 tiebreak points |
| Player 3 (1940) | 4.5 points, 18 tiebreak points |
| Player 4 (2375) | 4 points, 16 tiebreak points |
| Player 5 (1990) | 4 points, 14 tiebreak points |
| Player 6 (2125) | 3.5 points, 19 tiebreak points |
| Player 7 (1865) | 3.5 points, 10 tiebreak points |

Player 1 gets \$200 + the 1st place trophy.

Player 2 gets \$75 + the 2nd place trophy (an equal share of 2nd and 3rd money, plus the 2nd place trophy because 2's tiebreaks are better than 3's). This assumes that the director has ranked top prizes ahead of class prizes.

Player 3 gets \$75 + the 3rd place trophy (an equal share of 2nd and 3rd money, plus the 3rd place trophy because 3's tiebreaks are worse than 2's). This assumes that the director has ranked top prizes ahead of class prizes.

Player 4 gets nothing (because player 4 does not qualify for the Top Under 2200 prize or the Top Under 2000 prize).

Player 5 gets \$40 + the Top Under 2200 trophy (\$40 because the money for Top Under 2200 is greater than the money for Top Under 2000, and the Top Under 2200 trophy because Top Under 2200 is ranked higher than Top Under 2000).

Player 6 gets nothing (because the Top Under 2200 prize has already been awarded and 6 is ineligible for the Top Under 2000 prize).

Player 7 gets \$30 + the Top Under 2000 trophy.

Example 3:

| | |
|--------------------------------|----------------|
| (Top prizes – already awarded) | |
| 1st Under 2000 | \$200 + trophy |
| 2nd Under 2000 | \$100 + trophy |
| 1st Under 1800 | \$200 + trophy |
| 2nd Under 1800 | \$100 + trophy |

| | |
|-----------------|-------------------------|
| Player 1 (1650) | 5, 20 tiebreak points |
| Player 2 (1750) | 5, 18 tiebreak points |
| Player 3 (2020) | 4.5, 23 tiebreak points |
| Player 4 (1675) | 4.5, 19 tiebreak points |
| Player 5 (1920) | 4.5, 17 tiebreak points |
| Player 6 (1700) | 4.5, 16 tiebreak points |
| Player 7 (1845) | 4.5, 15 tiebreak points |

Player 1 gets \$200 + the 1st Under 2000 trophy (because 1st Under 2000 is ranked higher than 1st Under 1800).

Player 2 gets \$200 + the 1st Under 1800 trophy.

Player 3 gets nothing.

Player 4 gets \$50 + the 2nd Under 2000 trophy (because 2nd Under 2000 is ranked higher than 2nd Under 1800).

Player 5 gets \$50.

Player 6 gets \$50 + the 2nd Under 1800 trophy.

Player 7 gets \$50.

This example illustrates the difference between Class prizes and Under prizes. If the Under 2000 prizes were Class A prizes instead, they would go to Players 5 and 7, as both 5-pointers and the 4.5-pointers in Class B would be ineligible for the Class A prizes.

Example 4:

1st prize = \$300

2nd prize = \$200

A prize = \$100 + clock

Player 1 (Expert) scores 5-0, player 2 (A) scores 4.5-0.5, player 3 (A) scores 4-1.

Player 1 wins \$300 as a clear 1st place finisher.

Player 2 wins \$200 as a clear 2nd place finisher.

Player 3 wins \$100 as clear winner of the A prize, since the other A player has already taken 2nd prize.

Who wins the clock depends on which rule is being followed. If mainline rule [33D2](#) is being followed, Player 2 gets the clock, as the top finisher in Class A. If Variation [33D2a](#) is being followed, Player 3 gets the clock, as the clock follows the money for the Class A prize.

Example 5:

1st Under 2200 \$100 + trophy

2nd Under 2200 \$50 + trophy

1st Under 2000 \$80 + trophy

Player 1 (1900) 4.5, 20 tiebreak points

Player 2 (2100) 4.5, 18 tiebreak points

Player 3 (2150) 4.5, 16 tiebreak points

Player 4 (1900) 3.5, 23 tiebreak points

Player 1 gets \$80 and a trophy. The \$80 is the 1st under 2000 prize, which is the greatest monetary prize for which Player 1 is eligible. (If all three listed prizes are summed and divided equally, Player 1 would only receive \$76.67.)

Which trophy Player 1 receives depends on which rule is being followed. Under mainline rule [33D2](#), Player 1 gets the 1st Under 2200 trophy, the highest-ranked trophy for which he qualifies. Under Variation [33D2a](#), Player 1 gets the 1st Under 2000 trophy, because the trophy follows the money and Player 1 received the 1st under 2000 money (see above for explanation).

Player 2 gets \$75 and a trophy. The \$75 is an equal share of 1st Under 2200 and 2nd Under 2200 money, as the 1st under 2000 money has already been awarded.

Which trophy Player 2 gets depends on which rule is being followed. Under mainline rule [33D2](#), Player 2 gets the 2nd under 2200 trophy, because the 1st under 2200 trophy has already been awarded and 2's tiebreaks are better than 3's. Under Variation [33D2a](#), Player 2 gets the 1st Under 2200 trophy because this trophy is still available and 2's tiebreaks are better than 3's.

Player 3 gets \$75 and *might or might not get a trophy depending on which rule is being followed*. The \$75 is an equal share of 1st Under 2200 and 2nd Under 2200 money.

If mainline rule [33D2](#) is being followed, Player 3 gets no trophy, because both Under 2200 trophies have already been awarded. If Variation [33D2a](#) is being followed, Player 3 gets the 2nd Under 2200 trophy, because this trophy is still available and 3 has more points than 4.

Player 4 gets no money, as it has all been awarded. If *mainline rule* [33D2](#) is being followed, Player 4 gets the *1st Under 2000 trophy*, as this trophy is still available. If *Variation* [33D2a](#) is being followed, Player 4 gets *no trophy*, as they have all been awarded.

Trophy prizes for Example 5 under the two rules (monetary prizes are the same under the two rules):

| | <u>33D2</u> | <u>33D2a</u> |
|----------|-------------|--------------|
| Player 1 | 1st U2200 | 1st U2000 |
| Player 2 | 2nd U2200 | 1st U2200 |
| Player 3 | | 2nd U2200 |
| Player 4 | 1st U2000 | |

TD TIP: The prize Player 1 received in this example shows how money is taken out of a pool to be split if a player in the tied group would get more money by taking a particular prize, 1st under 2000 in this example, for which others in the tie are ineligible. In this case the \$80 is removed from the pool that is split by the remaining players in the tie (Player 2 and Player 3). *See also* [32B3](#), *Ties for more than one prize*.

33E. Prizes based on points.

Some organizers base prizes on points scored rather than place. Such events often award prizes to all plus scores, a popular feature for players who doubt their ability to win the top-place prizes.

For example, in a 5-round Swiss with an entry fee of \$30, it could be announced that 5 points will win \$100, 4.5 points will win \$50, 4 points will win \$30, 3.5 points will win \$20, and 3 points will win \$10. With a fee of \$60, prizes might be 5 points will win \$300, 4.5 point will win \$150, 4 points will win \$90, 3.5 points will win \$60, 3 points will win \$30. These levels provide relative safety for the organizer, since even with a poor turnout prizes will often be less than entry fees.

Prizes based on points have proven more popular with Experts and below than with Masters, so organizers should consider not using them in top sections. It is desirable to have such events in sections of no more than two 200-point classes each or to offer supplementary prizes for lower classes unlikely to make plus scores. A separate section for each class is ideal if the expected turnout is sufficient.

The based-on-points method has a unique advantage over prizes that are guaranteed or based on entries. The announced prizes are never reduced, but their total varies according to the turnout. This protects the organizer against financial loss without the player disappointment sometimes caused by prize reduction. *See also* [32C4](#), *Minimum prizes in based-on-entries tournaments*.

33F. Unrateds.

Note that many players who are playing in their first US Chess tournament, although they have no US Chess ratings, are by no means beginners. Some have high ratings or categories in other countries, and not all reveal these to

directors as required. Unrated players should generally not be eligible for any prizes of value other than place or unrated prizes. Prizes such as “D/E/Unrated” are not recommended.

When substantial cash prizes are offered in sections for lower-rated players, unrateds are often ineligible to enter or have a prize limit far below that of rated players. *See also 29J, Unrateds in class tournaments.*

34. Breaking Ties

34A. Introduction.

There is no perfect tiebreak system; each has its faults. In some events, especially large ones, ease and speed of calculation is a concern. In other events where time is not pressing, playoffs provide a better alternative to traditional tiebreak systems. Playoffs are often conducted at a faster time control than the tournament; even five-minute games have been used.

34B. Announcement.

When used, tiebreak systems should be posted at the site before the first round. There are several tiebreak systems that provide good and objective methods for directors to break ties for indivisible prizes.

Frequently, one tiebreak method alone will not break the tie, and it is necessary to use a secondary and sometimes even a tertiary method to produce a decision. Thus, at least the first two tiebreak systems should be posted. The director should be prepared to explain how the tiebreak systems work, as time permits.

34C. Monetary prizes.

Tiebreaks are not used for cash prizes, which are divided evenly among the tied players. An exception is a playoff, which may be used to determine cash prizes if notice of this is given in all detailed pre-tournament publicity. *See also 32B, Distribution.*

34D. Choice of tiebreak methods.

Different systems will yield different results, but the systems discussed here are not capricious or random. Each seeks to discover the *first among equals*, the player who has a somewhat better claim to a prize than those who earned the same score based on the strength of his or her opposition. Which system to choose depends on the nature of the tournament, its traditions, and the qualities required for the specific situations and conditions at hand.

34E. Calculating Swiss tiebreaks.

This section deals with various systems that have been used successfully at all levels of play. For team events see [34G, Team tiebreaks](#).

Unless a different method has been posted or announced before the start of the first round, players will expect the following sequence of tiebreak systems to be employed as the first four tiebreakers. Any variation to be used within the various systems should be posted also. These systems (and some additional ones) are explained in detail following the list.

1. Modified Median
2. Solkoff
3. Cumulative
4. Cumulative of Opposition

TD TIP: Pairing software can calculate tiebreaks automatically.

TD TIP: The TD should realize that in the unique case of multiple players all finishing the tournament with perfect scores (winning the maximum number of games possible in a tournament), the standard tiebreaking systems would not have the same relevance as they would in outcomes where the players finished with less-than perfect scores, and could have otherwise done better. It is impossible to improve on a perfect score. Therefore, in the special case of more than one player finishing with a perfect score, the TD should make every effort possible to have a playoff

among all players with perfect scores to determine the winner of the event. The playoff does not have to be rated, and the time control can be faster than the time control used for the tournament (but should allow at least five minutes per player). A special playoff to break perfect-score ties does not need to be announced in the tournament publicity, but should be announced to the players at the beginning of the tournament.

34E1. Modified Median

The Median system, also known as the Harkness system for inventor Kenneth Harkness, evaluates the strength of a player's opposition by summing the final scores of his or her opponents and then discarding the highest and lowest of these scores.

In the Modified Median system, players who tie with even scores (an even score is equal to exactly one half of the maximum possible score), have the highest- and lowest-scoring opponents' scores excluded. The system is modified for players with non-even scores to disregard only the least significant opponents' scores: the lowest-scoring opponent's score is discarded for tied players with plus scores and the highest-scoring for tied players with minus scores.

For tournaments of nine or more rounds, the top two and bottom two scores are discarded for even-score ties, the bottom two scores for plus-score ties, and the top two scores for minus-score ties.

These scores are adjusted for unplayed games, which count a half point each, regardless of whether they were byes, forfeits, or simply rounds not played after an opponent withdrew. So an opponent who won the first two games, lost the third, withdrew and did not play rounds four or five would have an adjusted score of 3 points ($1+1+0+0.5+0.5 = 3$). These adjusted scores are used only to calculate the opponent's tiebreaks. The player's own score is not changed.

If the player involved in the tie has any unplayed games, they count as opponents with adjusted scores of 0.

34E2. Solkoff.

The Solkoff system is the same as the Median system ([34E1](#)) except that no opponents' scores are discarded.

34E3. Cumulative.

To determine cumulative tiebreak score, simply add up the cumulative (running) score for each round. For example, if a player's results were win, loss, win, draw, loss, the wall chart would show a cumulative score round by round as 1, 1, 2, 2.5, 2.5. The cumulative tiebreak total is 9 ($1+1+2+2.5+2.5 = 9$). If another player scored 2.5 with a sequence 1, 2, 2.5, 2.5, 2.5, the tiebreak points scored would be 10.5 ($1+2+2.5+2.5+2.5 = 10.5$). The latter player's tiebreaks are higher because he or she scored earlier and presumably had tougher opposition for the remainder of the event. One point is subtracted from the sum for each unplayed win or full-point bye ([22B](#)); likewise, one-half point is subtracted from the sum for each unplayed draw or half-point bye.

This system is ideal for large events, since it is very fast and easy to use. It also avoids the problem, common in Median and Solkoff, of having to wait for a lengthy last-round game between two non-contenders to end for top prizes to be decided. Another advantage is that last-round scores need not be included in calculating cumulative tiebreak points, since they have no effect on breaking the tie (both tied players will necessarily have the same last round score).

TD TIP: *Cumulative tiebreaks can be calculated after the next to last round or while the last round is in progress.*

Additional systems choose the stronger player by:

34E4. Median system (not modified).

See [34E1](#).

34E5. Result between tied players.

Self-explanatory if two tie, but useful only when they were paired and did not draw. If more than two tie, all results among tied players should be considered, with rank according to plus or minus, not percentage. For example, 3-1 (+2) beats 1-0 (+1).

34E6. Most blacks.

Also self-explanatory.

34E7. Kashdan.

This system rewards aggressive play by scoring 4 tiebreak points for a win, 2 for a draw, 1 for a loss, and 0 for an unplayed game. Note that if players with no unplayed games tie, the one with fewer draws will come out ahead.

34E8. Sonneborn-Berger.

See 34F. The disadvantage of using this system in a Swiss is that losses are disregarded, and a player losing to a strong opponent deserves more credit than one losing to a weak opponent. In a round robin, this problem does not exist, since everyone plays the same field.

34E9. Cumulative scores of opposition.

The cumulative tiebreak points of each opponent are calculated as in 34E3 and these are added together.

34E10. Opposition's performance.

This method averages the performance ratings of the players' opposition. Performance ratings are calculated by crediting the player with the opponent's rating plus 400 points for a victory, the opponent's rating minus 400 points for a loss, and the opponent's rating for a draw. Results of tied players against each other should not be included, since this would give one of the players an unfair advantage. After the performance rating for each tied players' opponents has been calculated, they are averaged. Both this system and 34E11 may be difficult to use when unrated players are in the tournament.

Example: A player who wins against a 1400 and a 1500, draws against a 1600, and loses to a 1700 would have a performance rating of 1650: $(1400+400) + (1500+400) + 1600 + (1700-400) = 6600$; $6600/4 = 1650$.

34E11. Average rating of opposition.

This system averages the ratings of players' opponents, the better tiebreak score going to the person who played the highest-rated average field. It sounds fair but has drawbacks. A tied player rated slightly above another will often have a very slightly higher-rated field and win the tiebreak by a statistically insignificant margin.

34E12. Speed play-off game(s).

The speed playoff, an exciting way to wind up a tournament, has been used as the first tiebreak to determine the title at several major events. See also 32F1, Tiebreaking and 32F, Trophies.

34E13. Coin flip

This breaks all ties.

***TD TIP:** One state chess association that has had a comprehensive list of tiebreaks for many years uses (in order): Modified Median; Solkoff; Cumulative; Result between tied players; Most blacks; Kashdan; Sonneborn-Berger; and Coin flip. Having an ordered list that goes this deep can be useful.*

34F. Round robin tiebreaks.

The most common method is the Sonneborn-Berger system, also known as the partial-score method. For each player in the tie, add the final scores of all the opponents the player defeated and half the final scores of all the opponents with whom the player drew. Nothing is added for the games the player lost, or for unplayed games. If the tie still remains, the results of the game(s) between the players involved in the tie are used.

34G. Team tiebreaks.**34G1. Game (or match) points.**

Since most team events in the United States are scored on match points, the easiest tiebreak is simply the total game points earned by the teams involved. However, it is of questionable value because the teams that face the weakest opposition are more likely to win their matches by large margins. If game scoring is primary, the number of matches won is a simple and fair tiebreak.

34G2. U.S. Amateur Team System.

For each round, the tiebreak points are the final score of the opposing team multiplied by the number of points scored against that team. For example, if Team A scored 2.5-1.5 against Team B, which finished the tournament with 3 match points, Team A's tiebreak for that round is $2.5 \times 3 = 7.5$. This system awards credit for an extra margin of victory without the drawbacks of using straight game points, and is preferable.

34G3. Other systems.

Most of the individual tiebreak systems described in 34E are also suitable for team play, but they have the drawback of making the margin of victory meaningless in match-point scoring. Many players find a team event more exciting when every game can affect the team standings, even after a match has been won or lost.

34H. Reentry tiebreaks.

- a. The reentered player must use the announced tiebreaks for the entry determined by [28S5, Reentry scores](#).
- b. The opponents of reentered players can use only the scores of whichever entry (the original entry or one of the reentries) that they played, when calculating the announced tiebreaks.

See also [32C5, Reentry prizes](#).

***TD TIP:** Due to the complexity of reentry tiebreaks directors and organizers need to consider very carefully the advisability of having both reentries and non-divisible prizes as options at the same event.*

35. Rules for Disabled and Assisted Players**35A. Purpose.**

The purpose of these rules for players with temporary or permanent disabilities is to encourage them to play chess. Bearing in mind that there are many kinds of disabled individuals with a wide variety of challenges, the tournament director enjoys considerable discretionary authority to institute special rules.

35B. Equality of treatment.

Players with temporary or permanent disabilities that prevent them from fulfilling certain conditions of the *Official Rules of Chess* shall have special consideration in meeting those rules. Their opponents shall be offered the same, or equivalent in the judgment of the TD, consideration. The tournament director is responsible for seeing that both opponents know about and understand any special rules for that particular game. No player may refuse to play a disabled or assisted human opponent. For rules regarding computers see [36, Rules and Regulations For Computer Participants](#).

35C. Eligibility for US Chess events.

To be eligible to compete, a player must be able to communicate in some unambiguous manner his or her selection of moves, in a way that does not require prompting of any kind from any person. An interpreter may be employed.

35D. Analogous situations.

When there are doubts concerning provisions to make in the rules for disabled players, the tournament director should consult the following rules for visually impaired players, closely adapted from FIDE's rules for the visually impaired, and apply them analogously. These rules apply when one or both players are impaired.

35E. Access.

US Chess organizers should make every effort to secure sites for their tournaments that are accessible to disabled players and provided with accessible facilities for their comfort.

35F. Rules for visually impaired and disabled players.

TD TIP: *These rules can be applied analogously to any case where a player is disabled. The director might also find it valuable to use these rules as a guide for dealing with cases in which the player has religious, philosophical, or practical concerns. See also 15A1, [Players unable to keep score](#).*

35F1. Special chessboard.

A blind, visually impaired, or disabled player is entitled to use a chessboard with securing apertures or other devices designed specifically for use by disabled players even if a non-disabled opponent prefers to use a normal board simultaneously. In a game between two unsighted or disabled players, each is entitled to individually use a separate board.

In a game involving a single disabled player, such player may use an additional special board, while the non-disabled player uses a normal board. In a game between two disabled players, either is entitled to use a special board, but the game may be played on a single special board if both players agree. In cases where there are two boards in use, the game position is maintained on both. A player or his assistant is responsible for physically moving the pieces on any board used by that player.

35F2. Announcement of moves.

Legal moves shall be announced clearly by the player, repeated by the opponent, and executed on the player's board. Failure to announce moves correctly may be penalized by the addition of two unused minutes to the opponent's remaining time.

TD TIP: *If a move different from that announced and repeated is executed, the TD or his designee must stop the game and determine if the announced or executed move will be designated as the completed move. See Rule 35F8, [Conflict between two positions](#).*

35F3. Touch-move rule.

On the blind, visually impaired, or disabled player's board, a piece shall be deemed *touched* when it has been taken entirely out of the securing aperture or other device on the special chessboard. See also Rule 10, [The Touched Piece](#) and 35F1, [Special chessboard](#).

35F4. Determination of a move.

A move shall be deemed determined ([Rule 9, Determination and Completion of the Move](#)) when all of the following procedures have occurred:

- a. A piece is placed into a securing aperture or other device on a special chessboard (35F1).
- b. In the case of a capture, the captured piece has been removed from the board of the player who is on move.
- c. The move has been announced (35F2).

Only after completing these procedures shall the opponent's clock be started. The move is completed ([Rule 9, Determination and Completion of the Move](#)) when the clock is pressed (5H). Pressing the clock before the move has been determined by these procedures may be penalized by the addition of two minutes to the opponent's remaining time.

TD TIP: *Often players will press the clock after determining the move on their own board but before announcing the move to the opponent. This would violate the procedures outlined in 35F4 and 35F2. The offending player should be penalized.*

35F5. Special clock.

A chess clock made especially for the blind, visually impaired or disabled player shall be admissible for use in that player's game. [Rule 16B2a](#) does not apply to such a clock.

35F6. Scorekeeping options.

An unsighted player or disabled player may keep the score of the game in Braille, by using a tape recorder, or by using any other specially-designed device. See also 35F10, [Optional assistance](#).

35F7. Correction of erroneously stated move.

A slip of the tongue in announcing a move must be corrected immediately and before starting the clock of the opponent.

35F8. Conflict between two positions.

If different positions arise on the two boards during a game, such differences must be corrected with the assistance of the director and with consultation of both players' game scores. In resolving such differences, the player who has recorded or announced one move but has made another one may be penalized by the addition of two minutes to the opponent's remaining time. **See also** [35F2, Announcement of moves](#) and [35F9, Conflict between positions and game scores](#).

35F9. Conflict between positions and game scores.

If discrepancies such as those described in [35F8](#) occur, and the two game scores are also found to differ, the game shall be reconstructed up to the last point of agreement, and the director shall adjust the clocks accordingly.

35F10. Optional assistance.

A blind, visually impaired, or disabled player shall have the right to make use of an assistant, who shall have any or all of the following duties:

- a. to make the moves of the blind or disabled player on the board of the opponent;
- b. to announce the moves of the non-disabled player;
- c. to keep score for the blind or disabled player and to start the opponent's clock;
- d. to inform the blind or disabled player, on request, of the number of moves made and the time consumed by either or both players;
- e. to claim a win on time for the blind or disabled player or inform the blind or disabled player when the opponent has touched a piece without moving it;
- f. to carry out the necessary formalities in cases when the game is to be adjourned;
- g. to pause the clock and summon a tournament director at the request of the blind or disabled player.

If the blind, visually impaired, or disabled player uses such assistance, the non-disabled player is entitled to and must provide his or her own parallel assistance should he or she so desire.

TD TIP: *Though not required to do so, the TD should do everything possible to help both the disabled and non-disabled players (opponents) to secure assistants. Often spectators or players with byes are willing to act as assistants.*

35F11. Assistance for the non-disabled player.

If the blind, visually impaired, or disabled player uses a special chessboard and does not require any assistance, the non-disabled player may make use of an assistant, provided by the non-disabled player, who shall announce either one or both players' moves and make the blind or disabled player's moves on the non-disabled player's board. Note that if acceptable to both players, they may both use the same assistant.

TD TIP: *As in the TD TIP above, though not required to do so, the TD should do everything possible to help both the disabled and non-disabled players (opponents) to secure assistants. Often spectators or players with byes are willing to act as assistants. same as tip above.*

35F12. Certification of visual impairment.

US Chess accepts a state's certification of a person's legal blindness as sufficient evidence of eligibility for tournaments for the visually impaired and for special considerations under these rules except if that person holds a valid driver's license.

36. Rules and Regulations for Computer Participants

36A. Membership.

The originator or the legal owner of a computer program may register the computer program as a member of US Chess. The dues for computers are the same as for regular members. The rights of computer members are: the right to play in US Chess-rated tournaments, subject to possible restrictions; the right to acquire an official US Chess rating; and a subscription to *Chess Life* magazine. Specific identification and registration procedures shall be determined administratively.

36B. Purchase of membership.

Computer program owners may purchase memberships only directly from US Chess office. Owners are required to sign a statement agreeing to specific rules. The memberships are available only for experimental programs, and owners are required to sign a noncommercial-use agreement.

36C. Computer participation must be advertised in advance.

Computers may not participate in rated tournaments unless that participation is prominently advertised in all pre-tournament publicity. Tournament announcements in *Chess Life* must specify that computers are eligible to participate by using the symbol “C” for computer participation. If this symbol does not appear, computers may not enter. Entries must be arranged in advance with the director’s or organizer’s consent.

36D. Player may not object.

A player may not object to being paired against a chess-playing computer program in a tournament that advertised computer participation.

***TD TIP:** Because computer participation must be advertised in advance, players will know before they decide to enter a tournament that there is a possibility that they will be paired against a computer program; therefore, by entering the event they have given their implied consent to being paired against any possible computer program. It would be wise to post this at the site and to give players an opportunity to withdraw from the event if they do not wish to give their consent to such a pairing.*

36E. Computer vs. computer.

Computers shall not be paired against each other unless the event is for computers only.

36F. Prize eligibility.

Computers may win only prizes specifically designated for them. Other prizes shall be distributed as though computers were not entered.

36G. Commercial computers.

Commercially available computers and computer programs may acquire ratings only through US Chess’s Computer Rating Agency. Interested manufacturers should write to US Chess for details.

36H. Consultation.

Players who consult a computer for advice about their games shall be subject to the same penalties that would be imposed for asking advice from another person. *See also 20D, Use of additional chessboard or computer prohibited.*

36I. Rules for play involving computers.

Following are rules for US Chess-rated tournaments in which one player is a computer. In matters not governed by these rules, play is governed by applicable human rules, as interpreted by the director. In the following, the term *computer* refers to a chess program running on a computer. The term *opponent* refers to the computer’s opponent. The term *operator* refers to the person running the computer.

36I1. Parameter settings.

Before play begins, the operator shall do all initial setting up of the computer. At that time, the operator may freely specify any operating parameters, such as rate of play, suggested openings, value of a draw, etc. After play begins, the role of the operator is passive. During the game, the operator is not allowed to alter any parameter settings that might affect the course of the game.

36I2. Communication of moves.

During play, the operator is to communicate the opponent's moves to the computer.

36I3. Execution of moves.

The operator is to execute the computer's specified move on the chessboard. *Touch* rules do not apply to the operator, but excessive handling of pieces may violate other rules, such as those against distracting the opponent. A piece shall be deemed touched by the computer when a move involving that piece has been communicated by the program to its output device, except that displays of moves it is considering shall not be considered communication of a move. A move for the computer shall be deemed completed when the operator, in accordance with normal rules, has executed it on the board.

36I4. The clock.

After the computer's move is executed, the operator is to start the opponent's clock.

36I5. Reconciliation of positions.

If different positions should arise on the playing chessboard and the computer's representation of same, such difference shall be corrected with the assistance of the director. The director may choose either to accept the playing chessboard as official or retrace the moves to the point of departure. If the director chooses to back up the game, then clocks shall be adjusted accordingly. The director shall penalize the computer if the score indicates that the computer or its operator has caused the discrepancy of position.

36I6. Resetting the computer.

If the computer is unable to accept a legal move because of discrepancies, communication trouble, or computer trouble, then the operator may reset the current board position and status on the computer, along with clock times. Other parameters set must be the same as those in effect at the start of the game. The clocks are not stopped during the resetting of the computer nor for any other "down time" (time when the computer is unable to function despite the efforts of its operator).

36I7. Clock times.

There shall be a clock at the chessboard whether or not there is an internal clock in the computer. The operator and the opponent shall use the external clock, which shall be the official timer for the game.

The operator may communicate the clock times to the computer only if the computer initiates the request.

36I8. Memory-unit exchange.

The operator may change or insert memory units when the computer requests this and identifies the unit to be inserted, by description or by generating a coded signal or message with a single, predetermined meaning. Diskettes, disk cartridges, tapes, ROM cartridges ("program modules" in commercial machines), and the like are all considered equivalent forms of memory units.

36I9. Draw offers and resignation.

The operator may offer a draw, accept a draw, or resign on behalf of the computer, either with or without consulting the computer or humans of any playing strength about the decision. Humans so consulted should be disinterested as to the result of the game.

36I10. Time forfeits.

The operator may claim a win on time (13C) if the opponent has exceeded the time limit.

36I11. Adjournments.

The operator shall carry out the necessary adjournment formalities.

36I12. Score.

The operator and/or the computer must keep a score of the game.

36I13. FIDE warning.

An event with a non-FIDE registered computer cannot be FIDE-rated even for humans who are not paired against the computer.

Chapter 11: Blitz Chess

Blitz Chess (also known as Speed Chess, 5-minute Chess, Lightning Chess (2-minute), and Bullet Chess (1-minute)) is a variant defined as a single, sudden death time control from 1 to 10 minutes. Blitz games typically are set at five minutes and do not use time delay. Since each game takes only about 10 minutes, it has long been popular for fun games where time is limited, such as lunch breaks or between rounds of other tournaments. Some clubs will host Blitz events that may have as many as 20 rounds in a single evening.

Information regarding FIDE Blitz chess can be found in the FIDE Handbook: E.01. Laws of Chess appendix B: <http://www.fide.com/fide/handbook.html>

Take note that Blitz is not Quick Chess with a 5 minute time control (which follows standard sudden death rules.)

Editor’s Note: Most of the US Chess rules for regular and quick chess also apply to blitz chess. This chapter covers the rules that are different for blitz and also restates some of the fundamental rules that apply to all three forms of chess and that are important to blitz.

Blitz rating system: Blitz has its own rating system. To be rated, the time controls require from 5 to 10 minutes total playing time, and have a minimum primary time control of 3 minutes. All rounds must use the same time control. Hence G/3 inc/2 is rated under the Blitz system. Currently, Lightning and Bullet are not included in any rating system. *See also 5C. Ratable time controls.*

US Chess Blitz Rules

1.) Each player must make all his moves in the time specified for the game.

1a.) Standard time control (TC) for blitz is G/5 with no delay.

1b.) Time controls, including the use of delay or increment, are to be stated in any advance publicity and must also be announced or posted at the site.

TD TIP: *Non-standard time controls should be set keeping in mind the spirit and intent of Blitz Chess (rapid play, quick, fun chess). Total game time should not exceed 10 minutes per player per game.*

2.) All the clocks must have a special device, usually called a “flag,” either a regular flag or some device on a digital clock that indicates a flag fall.

Standard timer for Blitz chess:

2a.) Whatever timer is used (analog or digital), a standard timer must continue to run for both sides even if one side’s time has expired (See 8c).

2b.) A digital timer (given it meets the requirements of 2a) is preferred over an analog timer due to the precision of setting and the accuracy of timing. If no digital timer is available, then an analog timer may be considered standard.

2c.) The player with the black pieces chooses the standard timer.

3.) Before play begins, both players should inspect the position of the pieces and the setting of the clock, since once each side has completed a move the position on the board and the time on the clock remain as set.

3a.) If the king and queen are set up incorrectly, it is legal to castle short on the queenside and long on the kingside.

3b.) If an illegal position is created or an illegal move made without the opponent making a claim, the position stands and a claim not allowed when the opponent has determined a next move.

4.) Each player must press the clock with the same hand that moves the pieces, using one hand to both move the pieces and to press the clock.

TD TIP: This rule, the use of one hand in all blitz moves, also applies to castling and captures.

5.) The tournament director may state at the start of the event the direction the clocks are to face, and the player with the black pieces then chooses the side of the table on which to sit.

6.) Except for pressing the clock, neither player should touch the clock except:

6a.) To straighten it.

6b.) If a player knocks over the clock a penalty may be assessed.

6c.) If your opponent's clock does not tick you may press his side down and re-press your side; however, if this procedure is unsatisfactory, please call for a director.

6d.) Each player must always be allowed to press the clock after their move is made.

6e.) A player should not keep a hand on or hover over the clock.

7.)

Defining a win: A game is won by the player:

7a.) Who has legally mated his opponent's king.

7b.) Whose opponent resigns.

7c.) Who correctly points out that the opponent's flag has fallen first, at any time before the game is otherwise ended, provided the player has mating material. Mating Material consists of (at a minimum) two minor pieces, a pawn, a rook, or a queen provided it isn't a position where one could claim a draw under rule 8. If a player who claims a time forfeit states the claim with claimant's flag still up, but then fails to stop the clock in time to avoid also exceeding the time limit, the claim will be void, unless the flag fall was observed by a director or independent witness.

7d.) Who, after an illegal move is completed by the opponent, takes the king (if the king is in check) or claims the win and stops the clock, before the player determines a move and provided the player has sufficient mating material as defined in rule 7c. A player who moves his king adjacent to the opponent's king and then attempts to claim a win under this rule based on the opponent's failure to notice the check shall lose the game.

7e.) An illegal move doesn't negate a player's right to claim on time, provided it is made prior to the opponent's claim of an illegal move. If the claims are simultaneous, the player who made the illegal move loses.

8.) Defining a draw. Except as listed here, draw claims allowed under the regular rules are also allowed under the blitz rules.

A game is a draw:

8a.) If one of the kings is stalemated.

8b.) By agreement between the players.

8c.) If the flag of one player falls after the flag of the other player has already fallen and a win has not been claimed, unless either side mates before noticing that both flags are down.

8d.) If one player has insufficient mating material when the opponent's flag falls or makes an illegal move. "Insufficient Losing Chances" (ILC) claims are not allowed.

TD TIP: Blitz tournaments allowing "Insufficient Losing Chances" (ILC) claims should be advertised and announced in advance. The TD should be aware that common practice has shown that in addition to the official Blitz rules that "Insufficient Losing Chances" claims are upheld only:

- 1.) If both players each have just one identical piece and if neither side can show a forced win.
- 2.) In K+bishop vs. K+bishop of opposite colors, with only 1 pawn on the board, provided there is no forced win.
- 3.) K+rook pawn vs. K can be claimed as a draw once the defender is on the rook file in front of the pawn. K+pawn vs. K can be claimed as a draw once the defender is immediately on the square directly in front of the pawn as long as it's not on the 7th rank.
- 4.) K= + rook+rook pawn vs. K+rook is a draw if the pawn is blockaded by the king and there is no immediate win.
- 5.) The claimant has a significant material and positional advantage.

9.) If a player accidentally displaces one or more pieces, they shall be replaced on the player's own time. If it is necessary, the opponent may press the clock without making a move. If the player presses the clock after displacing pieces, then a penalty may be assessed.

10.) If a player touches one piece, then moves another; and presses the clock, the opponent may press the player's clock to force the player to move the piece touched, or may stop the clock to claim a violation. A penalty may be assessed.

11.) In case of a dispute either player may stop the clock while the tournament director is being summoned. In any unclear situation the tournament director will consider the testimony of both players and any reliable witnesses before rendering a decision.

12.) The tournament director shall not pick up the clock except in the case of a dispute when it is necessary to do so in order to assess penalties or adjust time.

13.) Spectators and players in another game are not to speak or otherwise interfere. If a spectator interferes in any way that may affect the result of the game (e.g. calling attention to a flag fall or an illegal move), the tournament director may cancel the game and rule that a new game be played in its stead and expel the offending party from the playing room. If the offending party is participating in the event, penalties at the discretion of the tournament director may be assessed up to expulsion from the event.

14.) A player who has played an illegal move must retract it and make a legal move with the piece touched prior to pressing the clock. If no legal move exists with that piece then he may make any legal move. Illegal moves

unnoticed by both players cannot be corrected afterwards. An illegal move is completed when the player presses the clock.

15.) A legal move is completed when the hand leaves the piece.

16.) If a player is promoting a pawn and the desired piece is not available, the player may stop both clocks in order to locate the piece and place it on the board. It is improper for the player to press the clock to start the opponent's time with the pawn still on the last rank. If this is done, the opponent may immediately restart the player's clock without moving.

17.) Standard penalty for first offense is to add one minute to the opponent's clock. There may be circumstances where a penalty assessed may not be standard (e.g. repeat offenses, unsporting behavior, etc...) and is left to the discretion of the tournament director.

TD TIP: *Illegal moves for any reason lose instantly if claimed correctly. The one-minute penalty does not apply to illegal moves. The standard penalty of one minute applies to other Blitz rules infractions.*

18.) The decision of the tournament director is final.

TD TIP: *This rule's intent stated more accurately could be: "The decision of the chief tournament director is final." Many Blitz events have a staff of TDs. The decision of a floor TD can obviously be appealed to the chief TD. An "appeals committee" or a "special referee" would unnecessarily delay the tournament. Players may appeal directly to US Chess, via their appeals process, after the event is over.*
